RE: Contract No. N62467-98-D-0995
Contract Task Order 0002 – Naval Air Station (NAS) Cecil Field – Jacksonville, Florida
Draft Source Removal Report – AST Removal at Building 293

Dear Mr. Ugolini:

CH2M HILL Constructors, Inc. (CCI) is pleased to provide one hard copy of the enclosed Draft Source Removal Report for the AST Removal at Building 293 at Naval Air Station Cecil Field in Jacksonville, Florida excluding Appendix B. In an effort to minimize the size of the hard copy and to move to paperless submissions, Appendix B, Copies of the Soil Manifests, along with the entire report have been provided electronically on a CD ROM for your convenience.

If you have any questions or comments regarding the enclosed, please do not hesitate to contact Sam Ross at (904) 777-4812 or me at (770) 604-9182, extension 403 or at paltman@ch2m.com.

Sincerely,

CH2M HILL Constructors, Inc.

A handwritten signature in black ink, appearing to read "Philip B. Altman". The signature is fluid and cursive, with a long, sweeping underline.

Philip B. Altman

SOURCE REMOVAL REPORT REQUIREMENTS – CHECKLIST

Per FAC 62-770.300(3) the Source Removal Report shall contain the following information in detail, as applicable:

Site Name: Day Tank 1

Date(s) of Source Removal: 09/24/99 – 11/11/99

Required Information	Response
1. Volume of product that was discharged, if known	<i>Unknown</i>
2. Volume of free product and the volume of groundwater recovered	<i>42,500 gallons of groundwater/free product</i>
3. Volume of contaminated soil excavated and treated or properly disposed	<i>23,935 tons of soil excavated and disposed of offsite</i>
4. Disposal or recycling methods for free product and contaminated soil	<i>Contaminated soils recycled at Soil Safe Technologies, Garden City, Georgia and St. Marys, Georgia. Contaminated groundwater/free product treated at Industrial Water Services (IWS) treatment plant and discharged to the Jacksonville, Florida sanitary sewer system.</i>
5. Disposal methods for other contaminated media	<i>No other contaminated media</i>
6. Scaled site map (including a graphical representation of the scale used) showing location(s) of free product recovered and the area of soil removed or treated and the approximate locations of all samples taken	<i>See Figure 2-1</i>
7. Table summarizing free product thickness in each monitoring well or piezometer and the dates the measurements were made	<i>See Table 2-4</i>
8. Type of field screening instrument or method used	<i>OVA/FID</i>
9. Dimensions of the excavation(s) and location(s), integrity, capacities and last known contents of storage tanks, integral piping, dispensers, or appurtenances removed	<i>Excavation area: 240 feet long x 220 feet wide x 11 feet deep (see Figure 2-1) One 200,000-gallon AST, one 500-gallon AST, one 3,000-gallon AST, all contained JP-5 fuel (see Figure 1-1)</i>
10. Dimensions of the excavation(s) and location(s) and capacities of replacement tanks	<i>Not applicable. Replacement tanks not installed.</i>
11. Table indicating the identification, depth and field soil screening results of each sample collected	<i>See Table 2-2</i>
12. Depth to groundwater at the time of each excavation, measurement locations and method used to obtain that information	<i>Depth to groundwater approximately 8 feet bls. Noted by visual observation (See Section 2.2.1)</i>
13. Type of petroleum or petroleum products discharged	<i>JP-5 fuel</i>
14. Documentation confirming the proper treatment or proper disposal of the free product or contaminated soil, including disposal manifests for free product, a copy of the treatment or acceptance of the contaminated soil and results of analyses, if performed	<i>See Table 2-1 and Appendix C</i>
15. For land farmed soil, a copy of the pre-treatment and post-treatment analytical results	<i>Not Applicable. Soil recycled offsite.</i>

1.0 INTRODUCTION

CH2M HILL Constructors, Inc. (CCI) was contracted by the Southern Division Naval Facilities Engineering Command (NAVFAC) to perform aboveground storage tank (AST) removal, excavate petroleum-contaminated soil, and prepare a Source Removal Report for Day Tank at Naval Air Station (NAS) Cecil Field in Jacksonville, Florida. The source removal was conducted in accordance with the Florida Department of Environmental Protection (FDEP) Petroleum Contamination Site Cleanup rule 62-770, Florida Administrative Code (FAC).

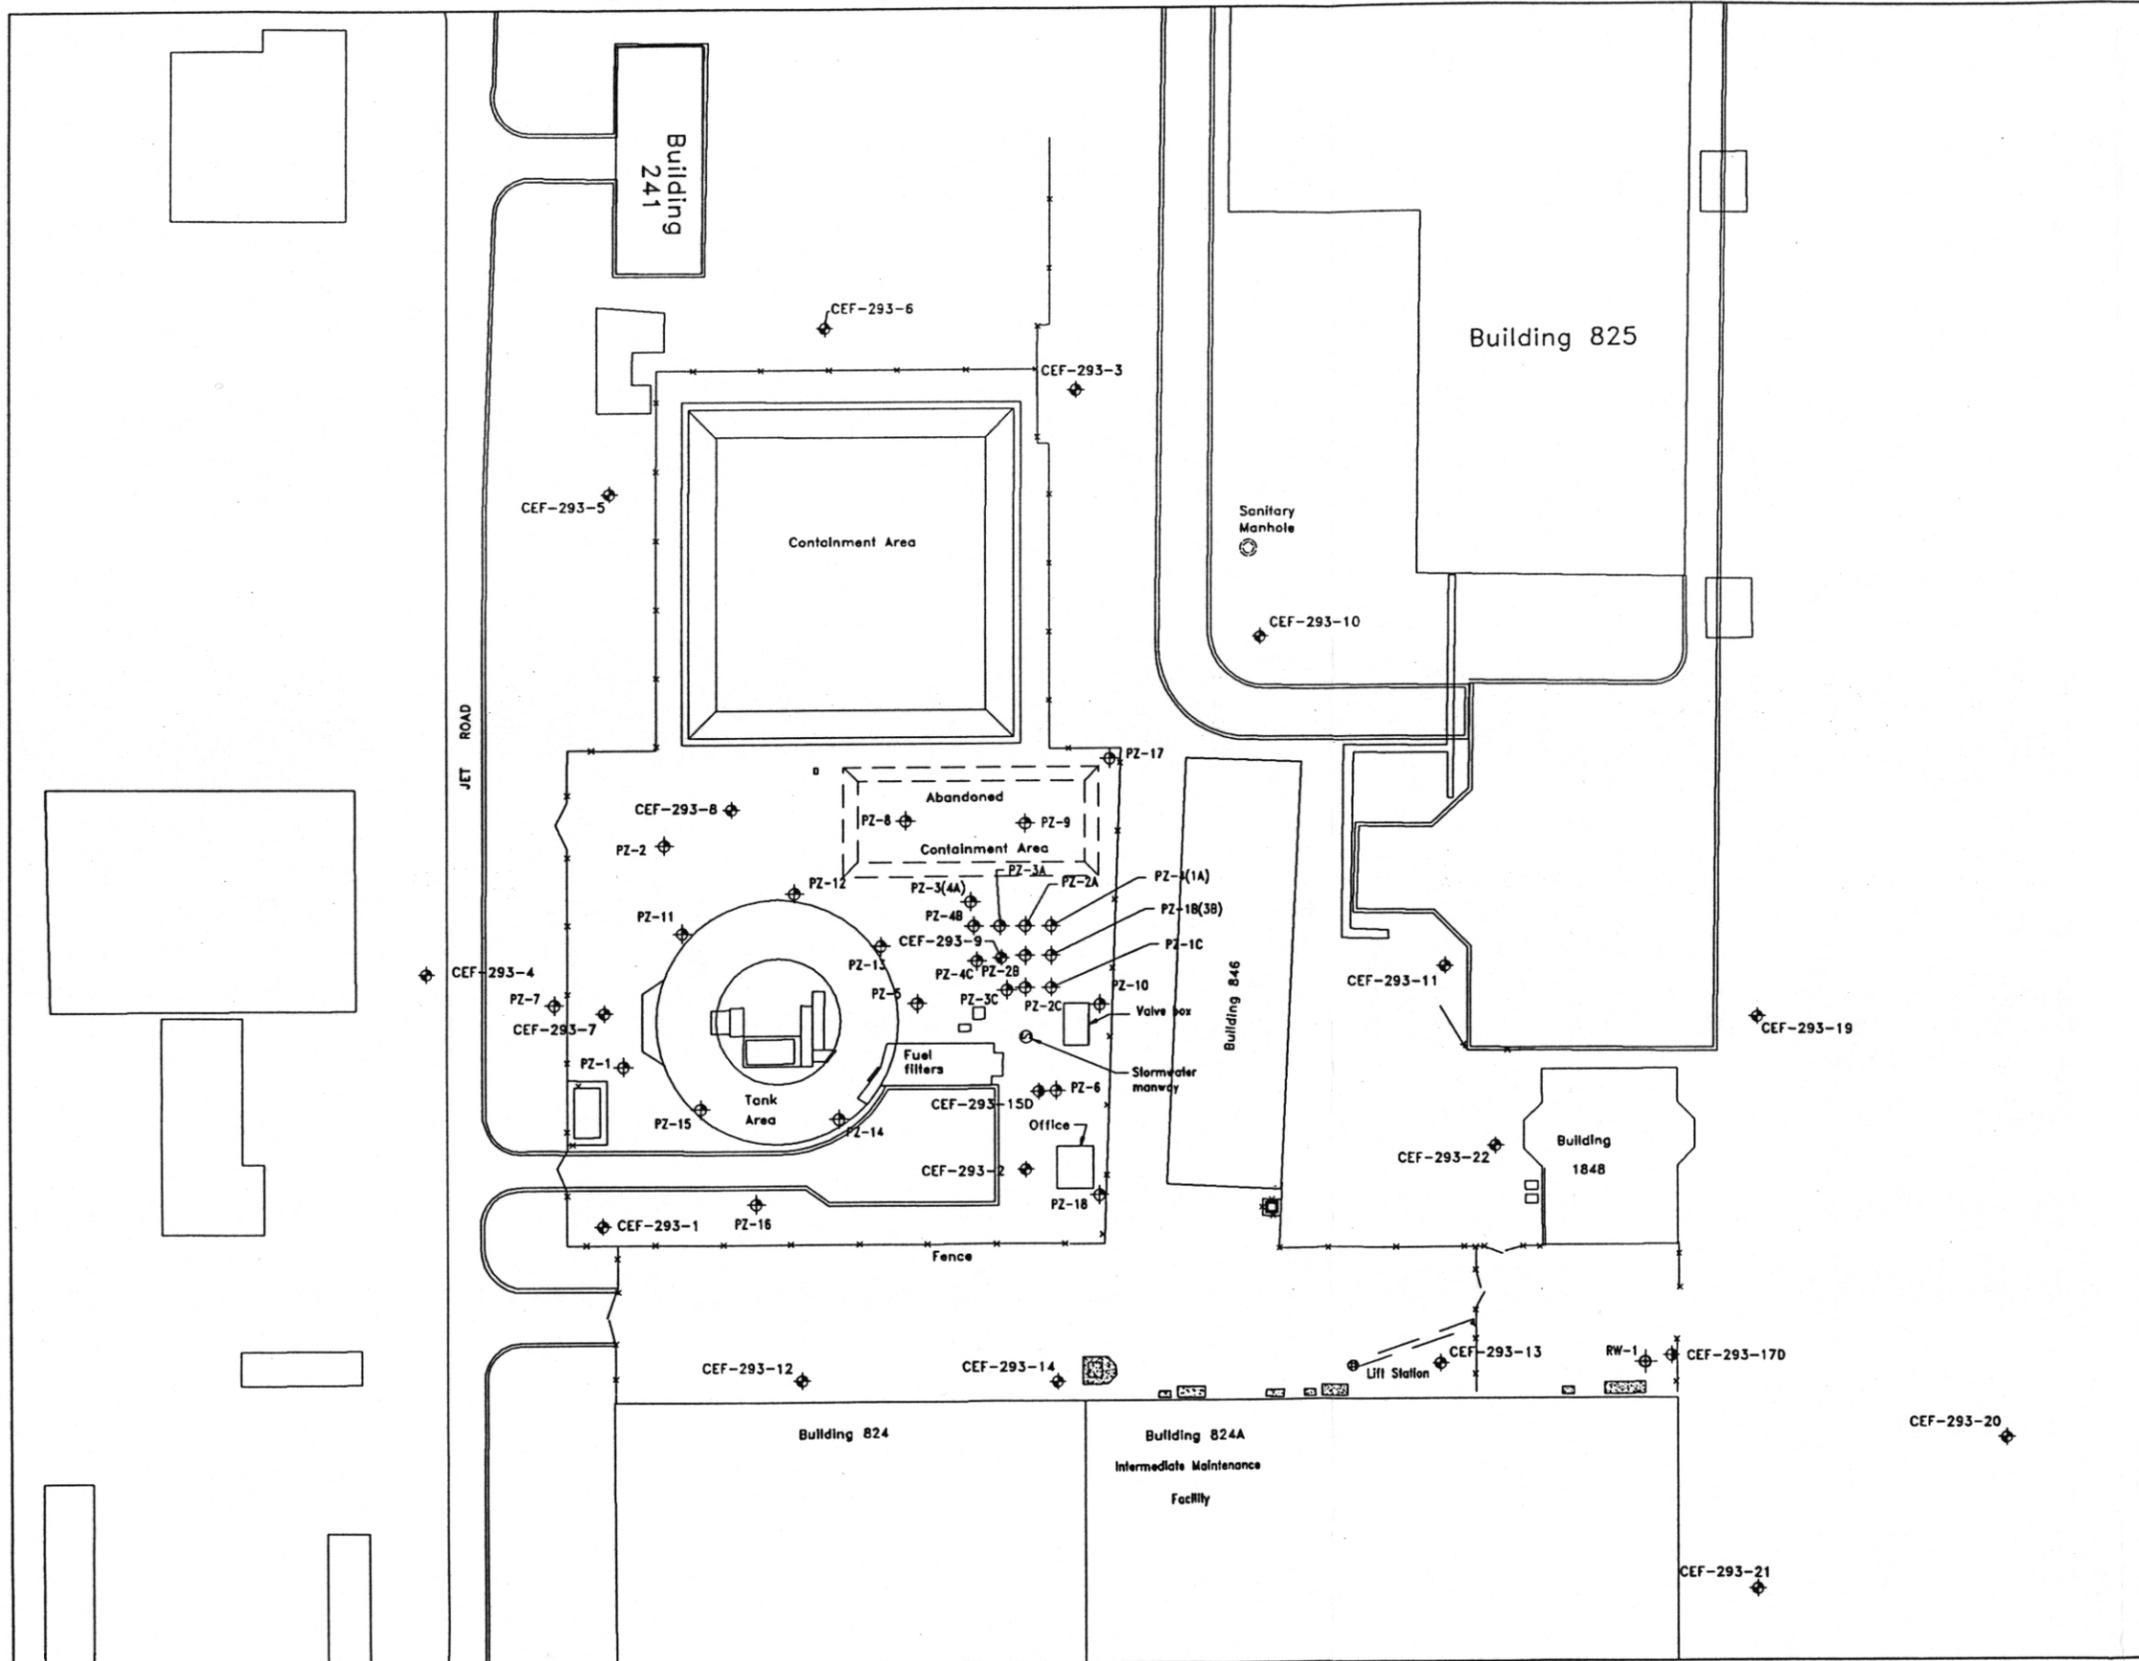

The scope of services for excavation of petroleum-contaminated soils at Day Tank 1 is described in detail in the NAS Cecil Field Basewide Work Plan, Revision 1 (CCI, 1998a) and the Work Plan Addendum No. 1, Revision 1 (CCI, 1998b). This work was authorized under the Remedial Action Contract No. N62467-98-D-0995, Contract Task Order (CTO) No. 0002.

1.1 SITE BACKGROUND. The site contained one 200,000-gallon AST for storage of jet fuel to supply the high-speed refuelers located on the flightline at NAS Cecil Field. The earth mounded (cut and cover) AST was installed in 1956 (ABB-ES, 1997), and was in service until September 1999. The site also contained a 500-gallon return tank and a 3,000-gallon skim tank that were used as part of the Day Tank 1 system for supplying the high-speed refuelers. Numerous spills that occurred during the operation of the Day Tank 1 system resulted in soil and groundwater contamination at the site (ABB-ES, 1997). A site plan showing the site conditions prior to the source removal is presented in Figure 1-1.

1.2 PROJECT OBJECTIVES. The primary objective of the soil excavation that was performed in conjunction with the AST removal at the site was to remove free product and petroleum-contaminated soils that exceeded the soil cleanup target levels as outlined in the Remedial Action Plan (RAP) (ABB-ES, 1997).

The RAP specified a two-tiered approach for classifying soil contaminant levels. First, a single primary total recoverable petroleum hydrocarbons (TRPH) soil cleanup concentration of 380 milligrams per kilogram (mg/kg) was utilized. If the sample exceeded the specified concentration for TRPH, the second tier of constituents for comparison included benzene (1.5 mg/kg), ethylbenzene (1,400 mg/kg), toluene (450 mg/kg), total xylenes (12,000 mg/kg), and naphthalenes (1,400 mg/kg). As specified in the RAP, soil concentrations that were below either tier of the target levels were considered acceptable for confirmation purposes.

The limits of the initial excavation were specified in the RAP based upon the free product thicknesses measured in the monitoring wells at the site. During the source removal, soils were excavated to the RAP specified limits, then confirmatory sampling for the Kerosene Analytical Group (KAG) was performed. The KAG analyses for soils includes volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8021, polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8310, and total recoverable petroleum hydrocarbons (TRPH) by the FL-PRO method. The confirmation sample concentrations were then compared to the target levels specified in the RAP to determine if additional excavation was required.

DAY TANK 1, FACILITY 293
NAVAL AIR STATION CECIL FIELD
JACKSONVILLE, FLORIDA

2.0 SOURCE REMOVAL ACTIVITIES

A source removal was conducted at Day Tank 1 during the period of September 7 to November 5, 1999. Day Tank 1 was removed during the period of September 7 to October 15 and the return tank was removed from the site on September 23. The skim tank (a 3,000-gallon concrete vault) was not removed but was later abandoned in place by filling it with clean backfill material. A total of 23,935 tons of petroleum-contaminated soil was excavated from the site during the period of October 1 to November 5. Photographs showing the site before, during, and after the source removal are presented in Appendix A.

2.1 SITE PREPARATION. In preparation for excavation, all utilities were marked by the base maintenance contractor and Sunshine State One Call of Florida. An active, high voltage, direct-buried electric line was encountered on the western edge of the excavation. The line was deactivated and supported during excavation activities and reburied during backfill activities. No other active utilities were encountered during the AST removal or associated soil excavation.

A total of four monitoring wells (CEF-293-2, CEF-293-7, CEF-293-9, and CEF-293-15D) that were located within the limits of the planned excavation were abandoned by a licensed well driller.

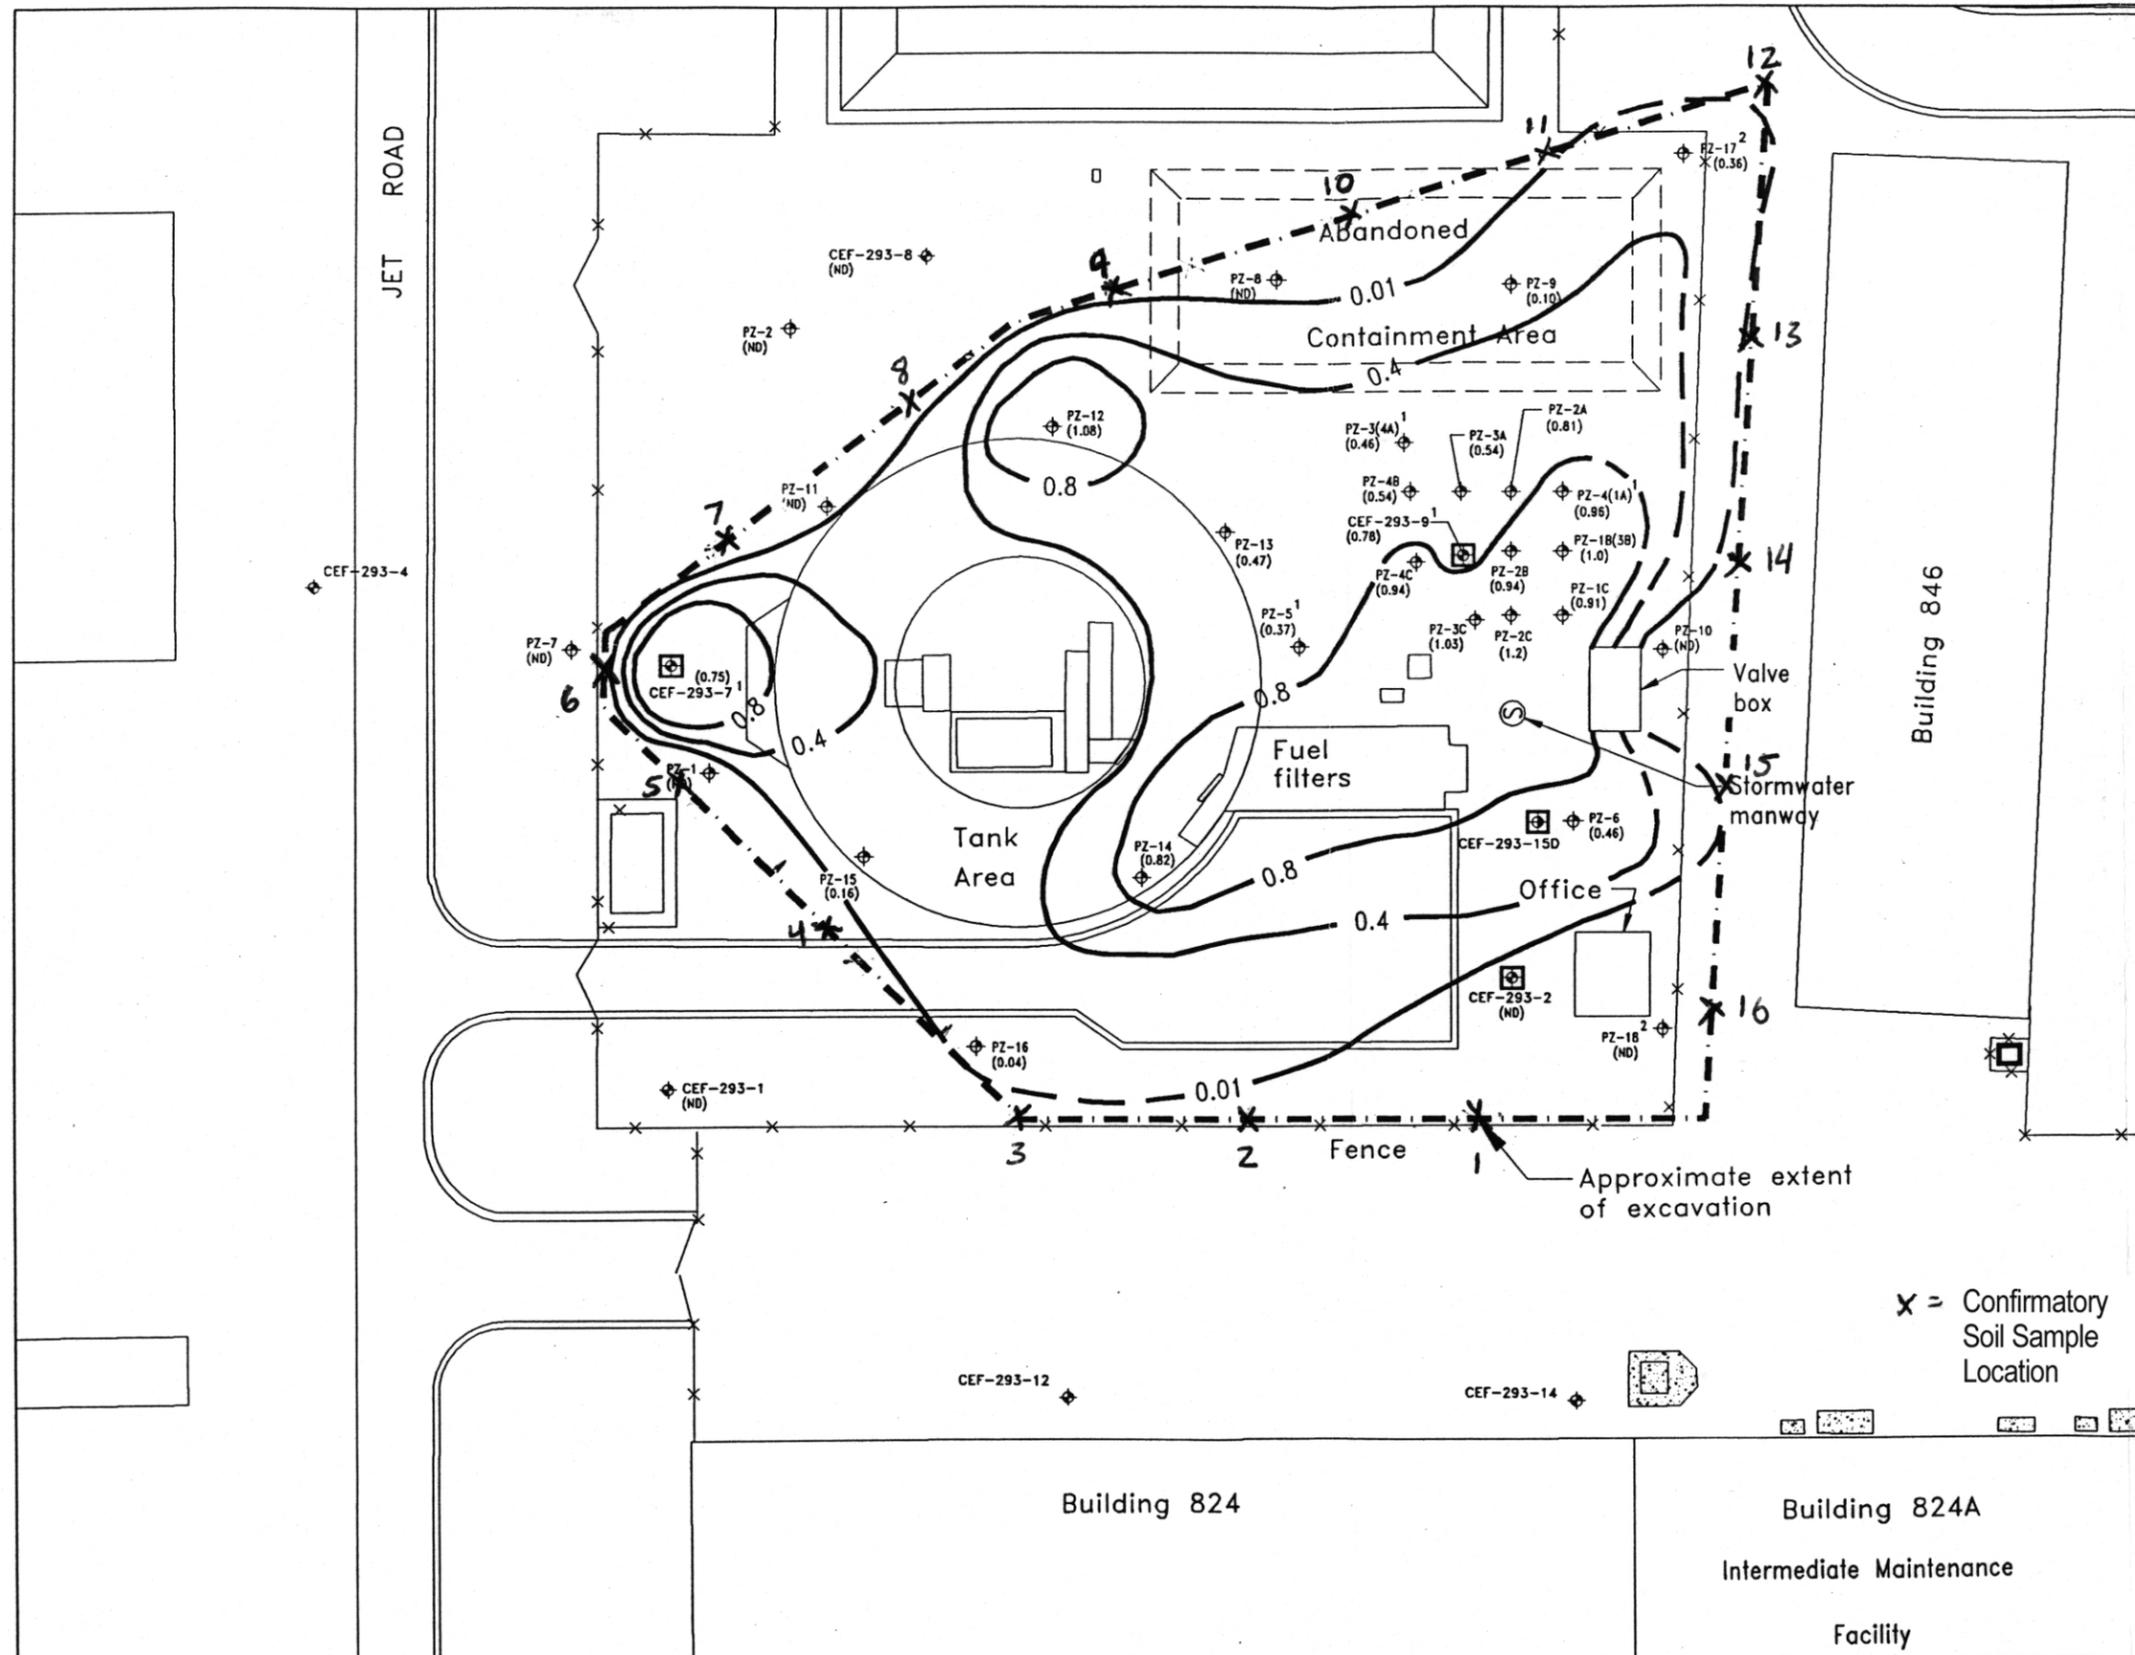

2.2 SOIL EXCAVATION AND DISPOSAL. Soils were excavated beneath and to the north, south, east and west of the tanks based on the limits of the excessively contaminated soil specified in the RAP. Based upon the concentrations of confirmation samples that were collected along the RAP specified limits, it was not necessary to extend the excavation beyond the RAP specified boundaries.

2.2.1 Soil Excavation. In accordance with the RAP, the soil was excavated to a depth of approximately 11 feet below land surface (bls). The depth to groundwater was determined by visual inspection during the excavation to be approximately 9 feet.

The soil was excavated using a trackhoe and was direct-loaded into trucks for offsite disposal. Based on the manifests, 23,935 tons of petroleum-contaminated soil were excavated and disposed of offsite. The excavated area is shown in Figure 2-1.

2.2.2 Soil Transportation and Disposal. The petroleum-contaminated soil was transported offsite by truck to the Soil Safe Technologies, Inc. soil thermal treatment facilities in Garden City, Georgia and St. Marys, Georgia. Copies of the manifests (including a summary table) are presented in Appendix B.

All of the soil was/will be recycled by the disposal facility into an asphalt mix for paving or other construction purposes. A copy of the Certificates of Recycle/Acceptance for Recycle is provided in Appendix C.

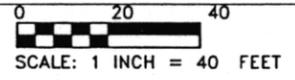

FIGURE 2-1. SOIL EXCAVATION AREA

X = Confirmatory Soil Sample Location

REMEDIAL ACTION PLAN
DAY TANK 1, FACILITY 293

NAVAL AIR STATION CECIL FIELD
JACKSONVILLE, FLORIDA

2.2.3 Groundwater Recovery. A total of 42,500 gallons of petroleum impacted groundwater/free product was recovered from the excavation during the period of October 12 to 29. The liquid was stored in a frac tank prior to being transported offsite by tanker truck to the Industrial Water Services (IWS) treatment facilities in Jacksonville, Florida. Copies of the manifests (including a summary table) are presented in Appendix D.

2.2.4 Backfilling and Site Restoration. The material used to backfill the excavation was clean fill brought in from a borrow pit operated by the Marietta Sand Corporation. A copy of the letter certifying that the material was clean fill is presented in Appendix E.

Once the excavation area was backfilled, the site was graded and seeded with a mixture of rye and bahia grass. All previously abandoned monitoring wells were reinstalled in accordance with the original construction detail provided. Copies of the well construction logs for the replacement monitoring wells are provided in Appendix F.

2.3 SAMPLING AND ANALYSES. Confirmatory soil samples were collected prior to the excavation at 50-foot lineal intervals along the boundary of the RAP specified excavation limits. Along the southern, western, and northern boundaries, soil borings were advanced to the water table and samples were collected at 2-foot intervals. All samples were screened with an organic vapor analyzer (OVA) equipped with a flame ionization detector (FID) and the sample exhibiting the highest concentration was submitted for laboratory analyses. Along the eastern boundaries, confirmation samples were collected from the wall of the excavation at depths of approximately 5-feet bls. The sampling locations are shown on Figure 2-1.

Groundwater samples will be collected in conjunction with the Long Term Monitoring Plan specified in the RAP, and were not collected during the source removal. Free product thickness measurements that were measured in the onsite monitoring wells on September 13, 1999, prior to the source removal. Monitoring well CEF-293-9, which contained the greatest amount (2.43 feet) of free product prior to the source removal, contained no free product on January 25, 2000 (subsequent to the source removal). A summary of free product thickness data is provided in Table 2-1.

Table 2-1

ppm = parts per million

2.3.2 KAG Analyses of Soil Sample. A total of 16 confirmatory soil samples were collected for KAG analyses on October 6 and November 5. Ten of the confirmation samples were below the RAP specified target concentration for TRPH (380 mg/L), and the remaining six samples were above the TRPH target. All of the samples were below the second tier of RAP specified target soil concentrations (benzene, ethylbenzene, toluene, xylenes, and naphthalene). The analytical results are summarized in Table 2-3. The analytical laboratory report is provided in Appendix G.

3.0 CONCLUSIONS

During the source removal, one 200,000-gallon AST, one 500-gallon AST, a total of 23,935 tons of petroleum-contaminated soils, and a total of 42,500 gallons of petroleum impacted groundwater/free product were removed and disposed at permitted offsite facilities. One 3,000-gallon AST was abandoned in place.

Soil was excavated during the source removal to the horizontal limits set forth in the RAP and to a RAP-specified depth of 11 feet bls. Sixteen confirmatory soil samples were collected at the horizontal limits of the excavation for KAG analyses. All of the samples exhibited KAG concentrations that were below either the first (TRPH) or second (benzene, ethylbenzene, toluene, total xylenes, and naphthalene) tier of target concentrations specified in the RAP, confirming that soil cleanup goals were reached along the horizontal limits of the excavation.

APPENDIX A

PHOTOGRAPHS

1. View of Day Tank 1 (200,000 gallon cut-and-cover AST) prior to field activity, looking southwest, Closest concrete structure is the vault for the 3,000 gallon skim tank.

2. View of Day Tank 1 prior to demolition, looking southeast across the secondary containment pond.

3. Demolition of structure on top of Day Tank 1.

4. View of uncovered Day Tank 1, looking northeast

5. Partially Demolished Day Tank 1, looking north

6. View of the concrete vault which contained the 500-gallon return tank

6. View of the excavation along the eastern boundary, looking north.

7. View of the excavation along the southeastern boundary, looking southwest. Note supported direct-buried electric line.

8. View of the excavation along the southeastern boundary, looking southwest

9. View of the excavation along the southern boundary, looking east.

10. Capped supply line to former Day Tank 1, on western edge of excavation

11. Skimming free product from the surface of the water table

12. View of graded site subsequent to excavation, looking north. Flush mounted vaults contain wells associated with groundwater treatment system that was installed subsequent to excavation.

13. View of graded site subsequent to excavation, looking south.

APPENDIX C

CERTIFICATION OF RECYCLE

Soil Safe Technologies Incorporated

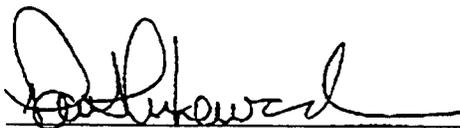

Certificate of Acceptance for Recycle

Soil Safe Technologies Incorporated accepted 16,804.7 of non-hazardous recyclable petroleum contaminated soil generated by U.S. Navy from Cecil Field, Jacksonville, FL under approval number 4-0611.

This material was contracted by and between Soil Safe Technologies Incorporated and TASK Environmental, contractor representing the generator. It was accepted for recycling based upon analytical information provided by a certified laboratory and also written certification by the generator verifying non-hazardous status.

This material was transported under manifest numbers 6110150 through 6110894. Manifest record list is attached.

Soil Safe Technologies Incorporated accepts full title to and responsibility for this material to include safe handling, storage and processing. We certify that this material will be recycled in full compliance with the Georgia Solid Waste Management Act into an environmentally benign sub base product for paving use.

Paul M. Lewczyk
Director of Operations

Thursday, November 11, 1999

Soil Safe Technologies Incorporated

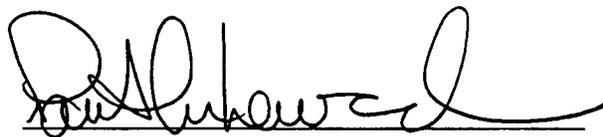

Certificate of Recycle

Soil Safe Technologies Incorporated accepted 3,328.1 measured tons of non-hazardous recyclable petroleum contaminated soil generated by the U.S. Navy from Cecil Field NAS, Jacksonville, Florida under approval number 4-0611.

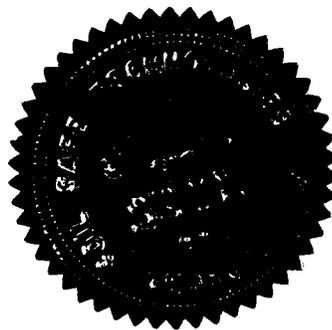

This material was contracted by and between Soil Safe Technologies Incorporated and TASK Environmental, contractor representing the generator. It was accepted for recycling based upon analytical information provided by a certified laboratory and also written certification by the generator verifying non-hazardous status.

This material was transported under manifest numbers 6110001 through 6110149. A comprehensive list of manifest totals is included as an attachment to this certificate.

Soil Safe Technologies Incorporated accepts full responsibility for this material to include safe handling, storage and processing. We certify that this material has been recycled into an environmentally benign product for paving or other construction purposes.

Paul M. Lewczyk
Director of Operations

Wednesday, October 20, 1999

Soil Safe Technologies Incorporated

Certificate of Acceptance for Recycle

Soil Safe Technologies Incorporated accepted 5,427.7 tons of non-hazardous recyclable petroleum contaminated soil generated by U.S. Navy from Cecil Field, Jacksonville, FL under approval number 4-0611.

This material was contracted by and between Soil Safe Technologies Incorporated and TASK Environmental, contractor, representing the generator. It was accepted for recycling based upon analytical information provided by a certified laboratory and also written certification by the generator verifying non-hazardous status.

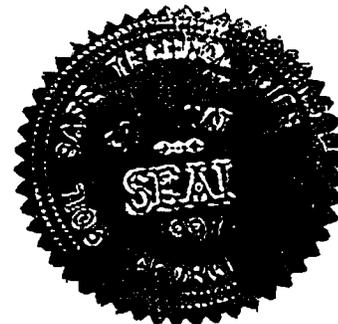

This material was transported under manifest numbers 6110895 through 611141. Attached is a detailed list of loads by manifest.

Soil Safe Technologies Incorporated accepts full title to and responsibility for this material to include safe handling, storage and processing. We certify that this material will be recycled in full compliance with the Georgia Solid Waste Management Act into an environmentally benign sub base product for paving use.

377 Agmac Avenue
Jacksonville, Florida 32254
(904) 781-7304

Pritchett Trucking
PO Box 311
Lake Butler, FL 32054

August 25, 1999

Attention: Mr. Bobby Lord

Please find attached, testing data on fill dirt pit located on Stratton Road in Jacksonville, Duval County, Florida. As you will notice these results are dated June, 1996. Please be advised that the material from this pit is clean and will meet The Navy specifications. Approximately 330 loads of this material was recently sent to Cecil Field for the Fuel Tank Farm. by another contractor and material was accepted.

If you have any questions or concerns, please contact me at the above listed number.

Respectfully,

A handwritten signature in cursive script that reads "Susan Henricks".

Data Qualifiers for Final Report

STL-Pensacola Inorganic/Organic and AFCEE Projects (under QAPP)

J4	(For positive results)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
J5	(TICs)	The reported value is quantitated as a TIC; therefore, it is estimated
J6	(For positive results)	LCS or Surrogate %R is > upper control limit (UCL) or < lower control limit (LCL)
J7	(For positive results)	The reported value is > the laboratory MDL and < lowest calibration standards; therefore, the quantitation is an estimation.
J (AFCEE description)		The analyte was positively identified, the quantitation is an estimation
R1	(For nondetects)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
R2		Improper preservation, no preservative present in sample upon receipt
R3		Improper preservation, incorrect preservative present in sample upon receipt
R4		Holding time exceeded
R10		Holding time exceeded, non-reportable for NDPEs compliance monitoring
R5		Collection requirements not met, improper container used for sample
R6		LCS or surrogate %R is < LCL and analyte is not detected or surrogate %R is < 10% for detects/nondetects
R7		Internal standard area outside -50% to +100% of initial calibration midpoint standard.
R8		Initial calibration or any calibration verification exceeds acceptance criteria.
R9		Improper preservation, sample not filtered in the field.
R (AFCEE description)		The data are unusable due to deficiencies in the ability to analyze the sample and meet QC criteria
F		< laboratory or AFCEE RL and > laboratory MDL
F (AFCEE description)		The analyte was positively identified but the associated numerical value is below the AFCEE or lab RL
U2		\leq Laboratory MDL (value for result will be the MDL, never below the MDL)
U (AFCEE description)		The analyte was analyzed for but not detected. The associated numerical value is at or below the MDL
B (AFCEE description)		The analyte was found in the associated blank, as well as in the sample
B1		Analyte was detected in the associated method blank.
@		Adjusted reporting limit due to sample matrix (dilution prior to digestion and/or analysis)
+		Elevated reporting limit due to dilution into calibration range
* (Metals & Wet Chem)		Elevated reporting limit due to matrix interference (dilution prior to digestion and/or analysis)
** (Organics)		Compounds flagged are not within the five point initial calibration curve. They are searched for qualitatively or as TICs.
#		Elevated reporting limit due to insufficient sample size
D		Diluted out
M		A matrix effect was present (sample was analyzed twice to confirm or chromatogram had interfering peaks)
S		Incorrect sample amount was submitted to the laboratory for analysis
T		Second-column confirmation exceeded the SW-846 criteria of 40% RPD for this compound.
E		Compound concentration exceeds the upper calibration range of the instrument.
W		Post-digestion spike for Furnace AA is out of control limits (85-115%), while sample absorbance is less than 50% spike absorbance.

ND = Not Detected at or above the STL-Pensacola reporting limit (RL)

N/S = Not Submitted

N/A = Not Applicable

IDL = Laboratory Instrument Detection Limit

MDL = Laboratory Method Detection Limit

RL = Reporting Limit (AFCEE RLs are listed in the AFCEE QAPP)

Any time a sample arrives at the laboratory improperly preserved (at improper pH or temperature) or after holding time has expired or prepared or analyzed after holding time, client must be notified in writing (i.e. case narrative)

Florida Projects Inorganic/Organic

Y1		Improper preservation, no preservative present in sample upon receipt
Y2		Improper preservation, incorrect preservative present in sample upon receipt
Y3		Improper preservation, sample temperature exceeded EPA temperature limits of 2-6°C upon receipt
Y (FL description)		The analysis was from an unpreserved or improperly preserved sample. Data may not be accurate
Q		Sample held beyond the accepted holding time
I		The reported value is < Laboratory RL and > laboratory MDL
U1		The reported value is \leq Laboratory MDL (value for sample result is reported as the MDL)
U (FL description)		Indicates the compound was analyzed for but not detected
T		The reported value is < Laboratory MDL (value shall not be used for statistical analysis)
V		The analyte was detected in both the sample and the associated method blank
J1		Surrogate recovery outside acceptance limits. Not enough sample available to reextract and/or reanalyze.
J2		The sample matrix interfered with the ability to make any accurate determinations
J3		The reported value failed to meet the established quality control criteria for either precision or accuracy
J (FL description)		Estimated value; not accurate

CLP and CLP-like Projects: Refer to referenced CLP Statement of Work (SOW) for explanation of data qualifiers.

The above samples were received at Severn Trent Laboratories, Inc. in Pensacola, FL on October 8, 1999. The chain of custody was not relinquished with signature, date, and time.

Qualifiers

STL-Pensacola policy is to apply a final qualifier to any data that have been affected by multiple qualifiers. This final qualifier reflects the most severe data qualifier that applied to the sample results. The data qualifiers, listed in order of the most severe through the least severe are R, M, I, J, and B. STL-Pensacola's "Data Qualifiers for Final Report" page defines the data qualifiers and is located in the attached data package.

FLPRO

Surrogate recoveries exceeded the upper control limit in several of the samples. Positive analytical results were flagged with the "J6" qualifier.

The analytical result for sample #9 was between the laboratory reporting limit and the laboratory MDL. This result has been flagged with the "I" qualifier.

Surrogate recoveries for OTP exceeded the upper control limit in the laboratory control sample (LCS) and the matrix spike duplicate (MSD) in batch FLS147. However, both the LCS and MS/MSD spike recoveries were within laboratory control limits; therefore, no further action was taken.

An equipment blank was the only water sample submitted for FLPRO analysis. Per EPA policy, field blanks may not be used for matrix spiking purposes; therefore, a client-specific sample was not available for matrix spiking purposes for batch FLW137.

8310

Samples 910244-001 through -008 were originally extracted on 10/11/99 in batch PAS100. A method blank, LCS and MS/MSD were extracted along with the samples. LCS recoveries were within acceptance limits. The MS/MSD had several recoveries outside acceptance limits due to matrix interference. Analysis of the method blank showed positive results for acenaphthylene, naphthalene, and 2-methylnaphthalene. The analyst requested that the batch of samples be reextracted because of the blank failures. Samples -001 through -008, a blank, LCS, and MS/MSD were reextracted on 10/13/99. No analytes were detected above reporting limit in the second blank extracted; however, the LCS recoveries were outside the lower acceptance limits and the reextracted sample results did not match the original sample results. Sample results on the final report were reported according to the greatest value obtained from either the original or reextracted sample analysis. The sample results are summarized in the attached table. Results from the original blank, LCS, and MS/MSD analysis were reported on the QC report.

Recoveries for Acenaphthylene, Phenanthrene, and Pyrene were outside acceptance limits in the MS/MSD due to matrix interference. Results for these compounds in the samples are qualified with an "M".

Acenaphthalene, Naphthalene and 2-Methylnaphthalene were detected in the method blank extracted on 10/11/99. Sample results associated with this blank have been qualified with a "B".

The surrogate recovered outside the upper control limit in samples 910244-006 and 910244-008. Positive sample results were qualified with a "J6".

Benzo(g,h,i)perylene and Dibenzo(a,h)anthracene recovered outside the lower acceptance limits in the LCS extracted along with sample 910244-009. "R6" qualifiers have been applied to sample 009 for these compounds.

An equipment blank was the only water sample submitted for 8310 analysis. Per EPA policy, field blanks may not be used for matrix spiking purposes; therefore, a client-specific sample was not available for matrix spiking purposes for batch PAW282.

Volatiles/8021B

Several analytes were detected between the laboratory reporting limits and the laboratory MDLs. These compounds have been flagged with an "I".

Insufficient sample was received to analyze a matrix spike duplicate for batches LUS095, LUS096, and LUS097. Sufficient sample was available to perform matrix spike analysis for these batches.

Rick Hayes
Senior Project Manager

November 29, 1999

Severn Trent Laboratories, Inc., Pensacola, FL

Comments:

THE SAMPLE HAD TOO MANY HEAVY HYDROCARBONS TO ANALYZE AT A LOWER DILUTION.
 FALSE POSITIVES ARE SUSPECTED DUE TO THE PATTERN OF THE CHROMATOGRAM.

Data Qualifiers for Final Report

STL-Pensacola Inorganic/Organic and AFCEE Projects (under QAPP)

J4	(For positive results)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
J5	(TICs)	The reported value is quantitated as a TIC; therefore, it is estimated
J6	(For positive results)	LCS or Surrogate %R is $>$ upper control limit (UCL) or $<$ lower control limit (LCL)
J7	(For positive results)	The reported value is $>$ the laboratory MDL and $<$ lowest calibration standards; therefore, the quantitation is an estimation.
J (AFCEE description)		The analyte was positively identified, the quantitation is an estimation
R1	(For nondetects)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
R2		Improper preservation, no preservative present in sample upon receipt
R3		Improper preservation, incorrect preservative present in sample upon receipt
R4		Holding time exceeded
R10		Holding time exceeded, non-reportable for NDPEs compliance monitoring
R5		Collection requirements not met, improper container used for sample
R6		LCS or surrogate %R is $<$ LCL and analyte is not detected or surrogate %R is $<$ 10% for detects/nondetects
R7		Internal standard area outside -50% to $+100\%$ of initial calibration midpoint standard.
R8		Initial calibration or any calibration verification exceeds acceptance criteria.
R9		Improper preservation, sample not filtered in the field.
R (AFCEE description)		The data are unusable due to deficiencies in the ability to analyze the sample and meet QC criteria
F		$<$ laboratory or AFCEE RL and $>$ laboratory MDL
F (AFCEE description)		The analyte was positively identified but the associated numerical value is below the AFCEE or lab RL
U2		$<$ Laboratory MDL (value for result will be the MDL, never below the MDL)
U (AFCEE description)		The analyte was analyzed for but not detected. The associated numerical value is at or below the MDL
B (AFCEE description)		The analyte was found in the associated blank, as well as in the sample
B1		Analyte was detected in the associated method blank.
@		Adjusted reporting limit due to sample matrix (dilution prior to digestion and/or analysis)
+		Elevated reporting limit due to dilution into calibration range
* (Metals & Wet Chem)		Elevated reporting limit due to matrix interference (dilution prior to digestion and/or analysis)
** (Organics)		Compounds flagged are not within the five point initial calibration curve. They are searched for qualitatively or as TICs.
#		Elevated reporting limit due to insufficient sample size
D		Diluted out
M		A matrix effect was present (sample was analyzed twice to confirm or chromatogram had interfering peaks)
S		Incorrect sample amount was submitted to the laboratory for analysis
T		Second-column confirmation exceeded the SW-846 criteria of 40% RPD for this compound.
TIC		Samples are searched for qualitatively as Tentatively Identified Compounds.
E		Compound concentration exceeds the upper calibration range of the instrument.
W		Post-digestion spike for Furnace AA is out of control limits (85-115%), while sample absorbance is less than 50% spike absorbance.

ND = Not Detected at or above the STL-Pensacola reporting limit (RL)
 IDL = Laboratory Instrument Detection Limit
 RL = Reporting Limit (AFCEE RLs are listed in the AFCEE QAPP)

N/S = Not Submitted N/A = Not Applicable
 MDL = Laboratory Method Detection Limit

Any time a sample arrives at the laboratory improperly preserved (at improper pH or temperature) or after holding time has expired or prepared or analyzed after holding time, client must be notified in writing (i.e. case narrative)

Florida Projects Inorganic/Organic

Y1		Improper preservation, no preservative present in sample upon receipt
Y2		Improper preservation, incorrect preservative present in sample upon receipt
Y3		Improper preservation, sample temperature exceeded EPA temperature limits of $2-6^{\circ}\text{C}$ upon receipt
Y (FL description)		The analysis was from an unpreserved or improperly preserved sample. Data may not be accurate
Q		Sample held beyond the accepted holding time
I		The reported value is $<$ Laboratory RL and $>$ laboratory MDL
U1		The reported value is $<$ Laboratory MDL (value for sample result is reported as the MDL)
U (FL description)		Indicates the compound was analyzed for but not detected
T		The reported value is $<$ Laboratory MDL (value shall not be used for statistical analysis)
V		The analyte was detected in both the sample and the associated method blank
J1		Surrogate recovery outside acceptance limits. Not enough sample available to reextract and/or reanalyze.
J2		The sample matrix interfered with the ability to make any accurate determinations
J3		The reported value failed to meet the established quality control criteria for either precision or accuracy
J (FL description)		Estimated value; not accurate

Data Qualifiers for Final Report

STL-Pensacola Inorganic/Organic and AFCEE Projects (under QAPP)

J4	(For positive results)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
J5	(TICs)	The reported value is quantitated as a TIC; therefore, it is estimated
J6	(For positive results)	LCS or Surrogate %R is $>$ upper control limit (UCL) or $<$ lower control limit (LCL)
J7	(For positive results)	The reported value is $>$ the laboratory MDL and $<$ lowest calibration standards; therefore, the quantitation is an estimation.
J	(AFCEE description)	The analyte was positively identified, the quantitation is an estimation
R1	(For nondetects)	Temperature limits exceeded ($\leq 2^{\circ}\text{C}$ or $\geq 6^{\circ}\text{C}$)
R2		Improper preservation, no preservative present in sample upon receipt
R3		Improper preservation, incorrect preservative present in sample upon receipt
R4		Holding time exceeded
R10		Holding time exceeded, non-reportable for NDPEs compliance monitoring
R5		Collection requirements not met, improper container used for sample
R6		LCS or surrogate %R is $<$ LCL and analyte is not detected or surrogate %R is $<$ 10% for detects/nondetects
R7		Internal standard area outside -50% to $+100\%$ of initial calibration midpoint standard.
R8		Initial calibration or any calibration verification exceeds acceptance criteria.
R9		Improper preservation, sample not filtered in the field.
R	(AFCEE description)	The data are unusable due to deficiencies in the ability to analyze the sample and meet QC criteria
F		$<$ laboratory or AFCEE RL and $>$ laboratory MDL
F	(AFCEE description)	The analyte was positively identified but the associated numerical value is below the AFCEE or lab RL
U2		$<$ Laboratory MDL (value for result will be the MDL, never below the MDL)
U	(AFCEE description)	The analyte was analyzed for but not detected. The associated numerical value is at or below the MDL
B	(AFCEE description)	The analyte was found in the associated blank, as well as in the sample
B1		Analyte was detected in the associated method blank.
@		Adjusted reporting limit due to sample matrix (dilution prior to digestion and/or analysis)
+		Elevated reporting limit due to dilution into calibration range
*	(Metals & Wet Chem)	Elevated reporting limit due to matrix interference (dilution prior to digestion and/or analysis)
**	(Organics)	Compounds flagged are not within the five point initial calibration curve. They are searched for qualitatively or as TICs.
#		Elevated reporting limit due to insufficient sample size
D		Diluted out
M		A matrix effect was present (sample was analyzed twice to confirm or chromatogram had interfering peaks)
S		Incorrect sample amount was submitted to the laboratory for analysis
T		Second-column confirmation exceeded the SW-846 criteria of 40% RPD for this compound.
TIC		Samples are searched for qualitatively as Tentatively Identified Compounds.
E		Compound concentration exceeds the upper calibration range of the instrument.
W		Post-digestion spike for Furnace AA is out of control limits (85-115%), while sample absorbance is less than 50% spike absorbance.

ND = Not Detected at or above the STL-Pensacola reporting limit (RL)
 IDL = Laboratory Instrument Detection Limit
 RL = Reporting Limit (AFCEE RLs are listed in the AFCEE QAPP)

N/S = Not Submitted N/A = Not Applicable
 MDL = Laboratory Method Detection Limit

Any time a sample arrives at the laboratory improperly preserved (at improper pH or temperature) or after holding time has expired or prepared or analyzed after holding time, client must be notified in writing (i.e. case narrative)

Florida Projects Inorganic/Organic

Y1		Improper preservation, no preservative present in sample upon receipt
Y2		Improper preservation, incorrect preservative present in sample upon receipt
Y3		Improper preservation, sample temperature exceeded EPA temperature limits of 2-6°C upon receipt
Y	(FL description)	The analysis was from an unpreserved or improperly preserved sample. Data may not be accurate
Q		Sample held beyond the accepted holding time
I		The reported value is $<$ Laboratory RL and $>$ laboratory MDL
U1		The reported value is \leq Laboratory MDL (value for sample result is reported as the MDL)
U	(FL description)	Indicates the compound was analyzed for but not detected
T		The reported value is $<$ Laboratory MDL (value shall not be used for statistical analysis)
V		The analyte was detected in both the sample and the associated method blank
J1		Surrogate recovery outside acceptance limits. Not enough sample available to reextract and/or reanalyze.
J2		The sample matrix interfered with the ability to make any accurate determinations
J3		The reported value failed to meet the established quality control criteria for either precision or accuracy
J	(FL description)	Estimated value; not accurate

CLP and CLP-like Projects: Refer to referenced CLP Statement of Work (SOW) for explanation of data qualifiers.
