Addendum to Phase II Sampling and Analysis Plan SWMU 6, Zone G Charleston Naval Complex

PREPARED FOR: U. S. Navy Southern Division
PREPARED BY: CH2M-Jones
DATE: April 30, 2002

The purpose of this plan is to addend the Phase II Sampling and Analysis Plan (SAP) (CH2M-Jones, April 2002). This addendum provides for the collection of seven (7) additional samples at five (5) additional sampling locations for total arsenic analysis.

The additional arsenic samples are to supplement RFI data in the vicinity of monitoring well G006GW003.

Table 1 shows the proposed sampling and testing effort and required sample collection depths. Sample locations should be adjusted in the field as follows: do not locate sample in a ditch or drainage swale where water collects. If necessary, move sample location away from ditch. Location G006SB030 should be on the west side of the existing swale and G006SB031 should be on the east side.

All collected samples should be analyzed for arsenic only. No other metal or other analyses are requested.
