MEMO FOR RECORD

13 May 86

Subject: New Development at the Former Herbicide Orange Storage Site, NCBC, Gulfport MS [RDV (Capt Stoddart); DEVP (Capt Foth)]

To: CC

1. Recently discovered photographs show large amounts of Herbicide Orange (HO) barrels located outside the area originally identified as being the former HO storage site. This new discovery, along with present and planned activities at the existing HO site, was assessed by DEV, RDV, and LEEVP. A strategy was jointly developed to continue activities at the original site as planned and to assess the new area by taking additional samples through the existing R&D sampling and analysis contract.
2. To date AFESC/DEV/RDV/PA, HQ USAF/LEEVP and the NCBC Director of Planning Division (Mr Gary Horman) have been appraised of the situation. We anticipate no major problems. It is a delicate, but manageable situation.
3. On the 15th of May, Capt Stoddart and Capt Foth will meet with Mr Horman to further discuss the situation. At the meeting they will present the planned strategy and will request Mr Horman inform his commander of the situation and of the actions we are taking.

DENNIS FOTH, Capt, USAF
