Re: Draft Removal Site Evaluation for Site 10 (PCB Contaminated Drainage Ditch), August 2001.

The Mississippi Office of Pollution Control has reviewed the above referenced document. The Workplan is adequate for the intended purpose and is approved. It should be noted that some source removal has been performed at this site, but it was found that higher concentrations of PCBs remained in soils after excavation. Investigative efforts may need to be expanded laterally and vertically if contamination extends beyond the areas studied during this investigation of the associated soil, sediment, surface water and groundwater mediums.

Please feel free to contact me if I can be of further assistance.

Sincerely,  
*Bob Merrill*
