Herbicide Samples

Method: The samples were analyzed by USEPA SW-846 Methods 8151A (sonication and separatory funnel extraction then esterification and capillary column GC/ECD) for soils or by USEPA SW-846 Methods 8151A (separatory funnel extraction then esterification and capillary column GC/ECD) for waters upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Samples 01SS0701, 01SS0801, 01SS0901, 01SS1001, 01SS1101 and 01SS1201 were extracted 22 days after date sampled due to samples not being logged in upon receipt. Client was contacted and requested extraction and analysis out of USEPA holding time.
- The surrogate DCAA exceeded the upper acceptance limit of 120% in several samples on the RTX-CLP2 column due to matrix. See form 2.
- The surrogate DCAA exceeded the retention time window of ± 0.03 on the RTX-CLP2 column in samples 01SS0801, 01SS1101, and 01SS1201 due to matrix in the samples.
- As is necessary for all GC/LC chromatography, manual integrations were performed to correctly quantitate target analytes. A "before" chromatogram and "after" chromatogram is provided for all sample analyses to provide information regarding the manual integrations performed.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Randy D. Ward
Quality Assurance Officer

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.
- P:** The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported.
- M:** The presence of an "M" to the right of an analytical result indicates that the sample matrix interfered with the quantitation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.
- I:** The presence of an "I" to the right of an analytical result that the presence of a qualitative interference could have caused a false positive or over estimation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.

TO: R. FISHER – PAGE 2
DATE: NOVEMBER 5, 2008

Holding Time

The 14 day hold time for cyanide was exceeded by 1 day affecting samples 01GW1401, 01GW1301, 01GW1201, 01GW1101, 01GW1001 and 01GW1501. The positive and nondetected results reported for cyanide in the affected samples were qualified as estimated, "J" and "UJ", respectively.

Laboratory Duplicate Results

Laboratory duplicate imprecision (RPD > 20%) was noted for cyanide affecting samples 01GW0601, 01GW0901, 01GW1701, 01GW1601, 01GW1601D, 01GW1801, 01GW1901, 01GW2101 and 01GW2001. Positive results reported for cyanide in the affected samples were qualified as estimated, "J".

Matrix Spike / Matrix Spike Duplicate Sample Results

The matrix percent recovery for cyanide was < 75% quality control limit affecting samples 01GW0601, 01GW0901, 01GW1701, 01GW1601, 01GW1601D, 01GW1801, 01GW1901, 01GW2101 and 01GW2001. Positive results reported for cyanide in the affected samples were qualified as estimated, "J".

Notes

The Contract Required Detection Limit (CRDL) percent recoveries for selenium were outside the 90-110% quality control limit. However, no validation actions are required for this noncompliance.

The following contaminant was detected in the laboratory method/preparation blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Thallium ⁽¹⁾	3.1 ug/L	15.5 ug/L

⁽¹⁾ Maximum concentration affecting samples 01GW1601D, 01GW1801, 01GW1901, 01GW2101 and 01GW2001.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation actions were warranted as all sample results were nondetects.

Executive Summary

Laboratory Performance: The 14 day hold time for cyanide was exceeded by 1 day affecting samples 01GW1401, 01GW1301, 01GW1201, 01GW1101, 01GW1001 and 01GW1501.

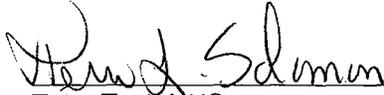

Other Factors Affecting Data Quality: Laboratory duplicate imprecision (RPD > 20%) was noted for cyanide. The matrix percent recovery for cyanide was < 75% quality control limit

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

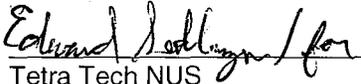

The text of this report has been formulated to address only those problem areas affecting data quality.

TO: R. FISHER – PAGE 3
DATE: NOVEMBER 5, 2008

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DOD QSM."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DOT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Betty DeVille
Inorganic Lab Manager

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody included with this data package.

I. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

II. METHODS

INORGANIC CASE NARRATIVE
TETRA TECH NUS
SDG# Gulfport 010
Work Order # 0808253, 0808268
August, 2008

US EPA SW846 Method 3050B was used to digest and method 6010B was used for analysis of ICAP metals. Method 7471A was used to digest and analyze mercury and method 9012A was used to distill and analyze cyanide. Note: The "U" flag indicates that the sample concentration is reported down to the laboratory MDL. The "J" flag indicates that the analyte result is between the laboratory reporting limit and the laboratory MDL. All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

III. PREPARATION

All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

IV. ANALYSIS

- A. **Calibration:** All calibration criteria were met.
- B. **Blanks:** All blank criteria were met with the following exceptions: The second CCB in the second ICAP analysis was out of the specification limits for thallium at 3.1 ug/L. All impacted samples had concentrations less than the MDL for thallium. There is no impact to the sample data.
- C. **Spikes:** All matrix spikes quality control criteria were met.
- D. **Duplicates:** All duplicate quality control criteria were met.
- E. **Samples:** All sample analysis proceeded normally.
- F. **Laboratory Control Samples:** All percent recovery quality control criteria were met.

THE LEADER IN ENVIRONMENTAL TESTING

CASE NARRATIVE

September 16, 2008

Client: Empirical Laboratories

Laboratory Work Order: NRI0532

Sample Receipt:

Samples were received intact, properly preserved and in good condition with custody seals and chain of custody documentation. Samples were received on ice, with cooler temperature measured at the laboratory of 0.2 and 0.3 °C.

Please note the cooler receipt form and any sample non-conformance forms for anomalies noted during sample log-in.

Holding Time:

The analysis was extracted and performed within method specified holding time.

Total Cyanide by SW846 9012B

Four samples were analyzed for Total Cyanide by SW846 9012B. The associated reagent water blank was below method detection limit. NRI0532-01, 01GW0601 was used for matrix spike / matrix spike duplicate analysis, and yielded results outside historical range due to sample matrix. The data was flagged accordingly. Blank spike / blank spike duplicate analysis meets target criteria. Initial and continuing calibration requirements were met.

Please let me know if there are any questions regarding this data package, or if I may be of assistance by calling 1-800-765-0980, ext. 1237 or by email at pam.langford@testamericainc.com.

VOC

The continuing calibration run on 09/03/08 at 11:55 on instrument VOA4 had a percent difference result for acetone that was outside of the quality control acceptance range of $\pm 25\%$. The following samples were affected:

01TB082608	01TB082808	01GW0701
01GW0701D	01GW0801	01GW1201
01GW1301	01GW1101	01GW1501
01GW1401	01GW1001	01GW0601
01GW0901	01GW1701	01GW1601
01GW1601D		

Positive and non-detected results for acetone were qualified as estimated (J and UJ, respectively) in the affected samples due to calibration noncompliance.

The following analytes were detected in the method blanks/trip blanks at the following maximum concentrations:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
1,2,4-trichlorobenzene*	0.18 ug/L	0.90 ug/L
Methylene chloride*	0.56 ug/L	5.6 ug/L

* Maximum concentration detected in trip blank

Action levels of 5X the maximum concentration of 1,2,4-trichlorobenzene and 10X the maximum concentration of methylene chloride were used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results for methylene chloride less the action level were qualified as non-detected (U) for blank contamination. No action was necessary for 1,2,4-trichlorobenzene, as this analyte was non-detected in all environmental samples. Trip blanks were not qualified due to blank contamination.

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis V4BLK0903 had relative percent difference (RPD) results greater than the quality control maximum for acetone and bromomethane. No action was taken because both the LCS and LCSD percent recoveries were within limits for these analytes.

Positive results for analytes reported to be below the quantitation limit but above the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

SVOC

According to the laboratory narrative, sample 01GW0901 was reanalyzed due to low surrogate recoveries. Only data from the reanalysis have been reported by the laboratory.

The laboratory data package originally did not include all of the necessary forms for SVOC initial calibration. The laboratory was contacted, and all forms were obtained and are included in this report.

The Form I report for sample 01GW1001 listed the analysis date for this sample as 09/03/08 but an extraction date of 09/08/08. The run logs indicate that the analysis date is correct for this sample. The extraction log indicates that this sample was extracted on 09/02/08. Therefore, sample 01GW0601 is assumed to have an extraction date of 09/02/08 and be within both the extraction and analysis holding times.

Several samples with a sample date of 08/28/08 were listed with an extraction date of 09/05/08, which is 1 day outside of the 7-day extraction holding time limit. The extraction log included with the raw data records the extraction of these samples on 09/04/08 beginning at 11:00. Specific sample extraction times are unknown. Therefore, non-detected results were qualified as estimated (UJ) for holding time noncompliance in the following samples: 01GW1601, 01GW1601D, 01GW1701, 01GW1801, 01GW2101, 01GW2001, 01GW1901, 01GW0601.

Sample 01GW0901 was extracted 5 days outside of the 7-day holding time limit. Non-detected results in this sample were qualified as estimated (UJ) for holding time noncompliance.

The initial calibration run on 07/24/08 on instrument BNA1 had a correlation coefficient result less than the 0.995 acceptance minimum for caprolactam. All samples were affected. Non-detected results for caprolactam were qualified as estimated (UJ) for calibration noncompliance in all samples.

The continuing calibration run on 09/03/08 at 20:18 on instrument BNA1 had a percent difference result outside of the acceptance range of $\pm 25\%$ for atrazine and di-n-octylphthalate. Samples 01GW1401 and 01GW1001 were affected. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

The continuing calibration run on 09/05/08 at 06:22 on instrument BNA1 had percent difference results outside of the $\pm 25\%$ acceptance range for atrazine, butyl benzyl phthalate, and caprolactam. The following samples were affected: 01GW0601, 01GW1701, 01GW1601, 01GW1601D, 01GW1801, 01GW1901, 01GW2101, and 01GW2001. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

The continuing calibration run on 09/09/08 at 14:43 on instrument BNA1 had percent difference results outside of the acceptance range of $\pm 25\%$ for atrazine and benzaldehyde. Sample 01GW0901 was affected. Non-detected results for these analytes were qualified as estimated (UJ) in sample 01GW0901 for calibration noncompliance.

The following analyte was detected in the method blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Bis(2-ethylhexyl)phthalate	6.2 ug/L	62 ug/L

An action level of 10X the maximum concentration of bis(2-ethylhexyl)phthalate was used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results reported to be less the action level were qualified as non-detected (U) for method blank contamination.

Sample 01GW1101 had surrogate recoveries less than the laboratory quality control minimum (but greater than 10%) for four surrogates: nitrobenzene-d5, 2-fluorobiphenyl, 2,4,6-tribromophenol, and terphenyl-d14. Non-detected results in both the base/neutral and acid fractions were qualified as estimated (UJ) for surrogate recovery noncompliance.

The laboratory control sample (LCS) analysis SBLK0902BW1 had an LCS percent recovery less than the laboratory quality control minimum for caprolactam. No laboratory control sample duplicate (LCSD) analysis was performed. Non-detected results for this analyte were qualified as estimated (UJ) in the associated samples: 01GW0701, 01GW0701D, 01GW0801, 01GW1201, 01GW1301, 01GW1101, 01GW1501, 01GW1401, 01GW1001.

The LCS/LCSD analysis SBLK0904BW1 had both LCS and LCSD percent recoveries that were greater than the laboratory quality control maximum for acenaphthylene. No action was necessary because all acenaphthylene results were non-detected in all samples and high recoveries affect positive results only. The LCS/LCSD percent recoveries were less than the laboratory quality control minimum for caprolactam. Non-detected results for this analyte were qualified as estimated (UJ) in the associated samples: 01GW0601, 01GW1701, 01GW1601, 01GW1601D, 01GW1801, 01GW1901, 01GW2101, and 01GW2001.

The LCS/LCSD analysis SBLK0909BW1 analysis produced LCS percent recovery results that were greater than the laboratory quality control maximums for benzo(a)anthracene, benzo(a)pyrene, and 2,4-dimethylphenol. No action was taken for these analytes because the LCSD percent recoveries were within limits. Both the LCS and LCSD percent recoveries for acenaphthylene were greater than the laboratory maximum. No action was taken for acenaphthylene because all results were non-detected in the associated sample (01GW0901). Bis(2-ethylhexyl)phthalate had both an LCS percent recovery and a relative percent difference (RPD) greater than the laboratory quality control maximums. No action was taken because the LCSD percent recovery for bis(2-ethylhexyl)phthalate was within quality control limits.

PEST/PCB

Toxaphene was run as a single-component analyte in the initial calibration analysis. All results were non-detected, so the laboratory did not perform continuing calibration for toxaphene. However, the the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006) requires that continuing calibration verifications be run for all target analytes. Therefore, all non-detected toxaphene results were qualified as estimated (UJ).

The continuing calibration run on 09/13/08 at 21:13 on Column ZB MR-1 had percent difference results outside of the quality acceptance range of $\pm 15\%$ for delta-BHC and 4,4'-DDD. No action was taken because the percent differences for these analytes were within limits on Column ZB MR-2.

The continuing calibration run on 09/13/08 at 21:13 on Column ZB MR-2 had percent difference results outside of the $\pm 15\%$ limits for methoxychlor and endrin ketone. No action was taken because the percent difference results were within limits for the same calibration on Column ZB MR-1.

The continuing calibration run on 09/13/08 at 2:32 on Column ZB MR-1 had a percent difference result for Peak 4 for Aroclor-1260 that was outside of the quality control acceptance range of $\pm 15\%$. No action was taken because all percent difference results were compliant on Column ZB MR-2.

Continuing calibration run on 09/14/08 at 02:08 on Column ZB MR-1 had a percent difference result outside of the $\pm 15\%$ acceptance range for delta-BHC. No action was taken because the result for delta-BHC was compliant on Column ZB MR-2.

The continuing calibration run on 09/14/08 at 02:08 on Column ZB MR-2 had percent difference results outside of the $\pm 15\%$ acceptance range for methoxychlor and endrin ketone. No action was taken because results for these analytes were within acceptance limits on the Column ZB MR-1.

The continuing calibration run on 09/14/08 at 02:26 on Column ZB MR-1 had percent difference results that were outside of the acceptance range of $\pm 15\%$ for Peak 5 of Aroclor-1016 and Peak 4 of Aroclor-1260. No action was taken because all percent difference results are within limits on Column ZB MR-2.

The continuing calibration run on 09/14/08 at 07:02 on Column ZB MR-2 had a percent difference result for endrin ketone that was outside of the acceptance range of $\pm 15\%$. No action was taken because all results were compliant on Column ZB MR-1.

The continuing calibration run on 09/14/08 at 07:20 on Column ZB MR-1 had a percent difference result for Peak 5 for Aroclor-1016 that was outside the $\pm 15\%$ acceptance range. No action was taken because all results were compliant on Column ZB MR-2 for this calibration.

According to the laboratory narrative, the duplicate sample 01GW0701D was "missed for surrogate spiking." Surrogate recovery results were reported as 0 for all four surrogate recoveries. However, the surrogate recoveries were within limits for the original sample (01GW0701). Therefore, non-detected results in sample 01GW0701D were qualified as estimated (UJ) for surrogate recovery noncompliance.

The LCS/LCSD report PW1BLK0902 had a percent LCS recovery result that was greater than the laboratory quality control maximum for delta-BHC. No action was taken because the LCSD percent recovery was within limits.

The LCS/LCSD report PW1BLK0904 had a percent LCSD recovery that was greater than the laboratory quality control maximum for Endosulfan I. No action was taken because the LCS percent recovery for this analyte was within limits.

The percent difference between columns exceeded the 25% maximum for the following analyte:

<u>Sample</u>	<u>Analyte</u>	<u>Percent Difference</u>
01GW1301	Endrin aldehyde	28.6 %

The positive result for endrin aldehyde was qualified as estimated (J) for having a percent difference exceeding 25% but less than 100%.

HERB

The continuing calibration run on 09/09/08 at 19:37 on Column RTX-CLP2 had a percent difference result outside of the $\pm 15\%$ acceptance range for the target analyte 2,4,5-T. No action was necessary because the percent difference for this analyte was within limits on Column RTX-CLP for the continuing calibration on 09/09/08 at 18:58.

The continuing calibration run on 09/10/08 at 04:03 on Column RTX-CLP2 had percent difference results for 2,4-D, 2,4,5-TP, and 2,4,5-T. No action was taken because all results were within acceptance limits in the corresponding calibration on Column RTX-CLP.

The continuing calibration run on 09/10/09 at 11:12 on Column RTX-CLP2 had percent difference results outside of the $\pm 15\%$ acceptance range for the target analytes 2,4-D, 2,4,5-TP, and 2,4,5-T. The percent difference result for 2,4-D was also outside of the $\pm 15\%$ acceptance range on Column RTX-CLP. Non-detected results for 2,4-D were qualified as estimated (UJ) in the affected samples: 01GW0601, 01GW0901, 01GW1601, 01GW1601D, 01GW1901, 01GW2101, 01GW2001. No action was taken for 2,4,5-TP or 2,4,5-TP because percent difference results for these analytes were within limits on Column RXT-CLP.

The surrogate recoveries were greater than the laboratory quality control acceptance maximum for several samples on Column RTX-CLP2. Samples 01GW0701, 01GW0701D, 01GW0601, 01GW0901, and 01GW2101 were affected. All surrogate recoveries were compliant on Column RTX-CLP. According to the laboratory narrative (and supported by the quantitation reports), all positive detections of 2,4,5-TP were reported from the compliant column except in sample 01GW0701. Therefore, the result for 2,4,5-TP was qualified as estimated (J) in sample 01GW0701 for surrogate recovery noncompliance. No results were qualified in any other samples.

The percent difference between columns exceeded the 25% maximum for the following analyte:

<u>Sample</u>	<u>Analyte</u>	<u>Percent Difference</u>
01GW0701D	2,4,5-TP	26.5 %
01GW1201	2,4,5-TP	124.8%
01GW1301	2,4,5-TP	182.1%
011GW1601	2,4,5-TP	65.6%
01GW1601D	2,4,5-TP	49.3%
01GW2101	2,4,5-TP	149.3%

Results with a percent difference between 25% and 100% were qualified as estimated (J). Results with a percent difference greater than 100% were qualified as rejected (R).

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several SVOC samples were qualified as estimated due to extraction holding time noncompliances. Calibration noncompliances led to qualification in all fractions. One analyte in both the VOC and SVOC fractions was qualified due to blank contamination. Surrogate noncompliances led to qualifications in the SVOC, PEST/PCB, and HERB fractions. LCS noncompliances led to the qualification of caprolactam in multiple samples. Percent difference between columns exceedances led to data qualification in the PEST/PCB and HERB fractions.

Other Factors Affecting Data Quality: Several VOC and PEST results were qualified as estimated due to uncertainty near the detection limits.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99), and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for Environmental Laboratories.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

EMPIRICAL LABORATORIES
COOLER RECEIPT FORM

LIMS Number: 0808268 Number of Coolers: 1 of 5
Client: Tetra Tech Project: Gulfport
Date/Time Received: 8-29-08 9:00 Date cooler(s) opened: 8-29-08
Opened By (print): E.J. Overby (signature): [Signature]

Circle response below as appropriate

1. How did the samples arrive?: FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 2493

2. Were custody seals on outside of cooler(s)? Yes No
How many: 1 Seal date: 8-28-08 Seal Initials: MAP ?

3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
7. Was project identifiable from custody papers? Yes No N/A
8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE Temperature of Samples upon Receipt: 5.1°C

Dates samples were logged-in: 8-29-08

9. Initial this form to acknowledge login of sample(s): (Name): E.J. Overby (Initial): [Signature]

10. Were all bottle lids intact and sealed tightly? Yes No N/A
11. Did all bottles arrive unbroken? Yes No N/A
12. Was all required bottle label information complete? Yes No N/A
13. Did all bottle labels agree with custody papers? Yes No N/A
14. Were correct containers used for the analyses indicated? Yes No N/A
15. Were preservative levels correct in all applicable sample containers? Yes No N/A
16. Was sufficient amount of sample sent for the analyses required? Yes No N/A
17. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 5030B/8260B (purge and trap followed by capillary column GC/MS) for waters upon receipt to the laboratory in satisfactory condition.

Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The method blanks associated with these samples had reported concentrations of methylene chloride at concentrations less than 1/2 the quantitation limit. Reported concentrations in the associated samples are qualified with a "B".
- In spike samples V4BLK0903LCS/LCSD, relative percent differences for acetone and bromomethane exceeded the limit of 30 at 40 and 34, respectively. These analytes were not detected above the quantitation limits in the associated samples.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Marcia K. McGinnity
Senior Project Manager

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.
- P:** The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported.
- M:** The presence of an "M" to the right of an analytical result indicates that the sample matrix interfered with the quantitation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.
- I:** The presence of an "I" to the right of an analytical result that the presence of a qualitative interference could have caused a false positive or over estimation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.

Semi-Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3510C/8270C (separatory funnel extraction followed by capillary column GC/MS) for waters upon receipt to the laboratory in satisfactory condition.

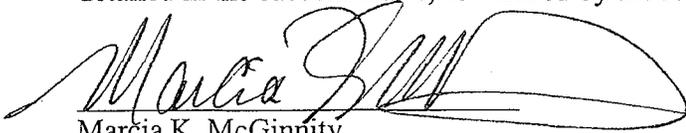

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- In the initial calibration verification, 3,3'-dichlorobenzidine exceeded 25% difference with a positive bias. It was not detected in the associated samples.
- In the continuing calibration verification standard analyzed 9/3/08 at 20:18, continuing calibration compound di-n-octylphthalate exceeded 20% difference with a positive bias at 35.1%. Evaluating all compounds against the 20% difference limit, 2 additional compounds exceeded with a positive bias while atrazine exceeded with a negative bias at 21.5%. None of the analytes with a positive bias were detected above the quantitation limits. All associated results for atrazine are qualified with a "Y" to indicate a potential low bias.
- Bis(2-ethylhexyl)phthalate was detected in the method blanks. Reported concentrations in the associated samples are qualified with a "B".
- In spike sample SBLK0902BW1LCS, caprolactam recovery was below the limit of 20% at 16%. All other recoveries were within limits.
- In spike samples SBLK0904BW1LCS/LCSD, caprolactam recoveries were below the limit of 20% at 19%/17% while acenaphthylene recoveries exceeded the limit of 105% at 107%/106%. All other recoveries and relative percent differences were within limits.
- In spike samples SBLK0909BW1LCS/LCSD, 7 of 130 recoveries exceeded the limits with a positive bias while the relative percent difference for bis(2-ethylhexyl)phthalate exceeded the limit of 30 at 56. See form 3. No target analytes were detected above the quantitation limit in the associated sample. Recoveries of the surrogates d5-nitrobenzene, 2-fluorobiphenyl,

2,4,6-tribromophenol and terphenyl-d14 are below the limits in sample 01GW1101 but greater than 10% (estimated). As this was discovered 8 days after sampling, re-extracted results would also have been validated as estimated so no re-extraction was performed.

- Recoveries of the surrogates were less than the limits with some less than 10% (rejectable) in the original extract for sample 01GW0901. Re-extraction was performed 12 days after sampling with good surrogate recoveries. The re-extract is included in the data package.
- Manual integrations: Quantitation signals were manually integrated in order to accurately reflect the peak areas based on the technical judgment of the analyst. A listing of the manual integrations performed and reason for the integration is attached to this case narrative. Before and after "pictures" are included with the raw data for each integration performed.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Senior Project Manager

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.

CHROMATOGRAPHIC FLAGS FOR MANUAL INTEGRATIONS

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

Pesticides/PCBs

Method: The samples were analyzed by USEPA SW-846 Methods 3510C/8081A/8082 (separatory funnel extraction followed by capillary column GC/ECD) for waters upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Analyses of the samples were completed using full calibration for 1016/1260. As no other aroclor patterns were identified, no other aroclor calibration checks were performed.
- Some analytes in the continuing calibration verifications (CCVs) exceeded the 20%D limit with a positive bias. None of the affected analytes were detected in the associated samples.
- In spike samples PW1BLK0902LCS/LCSD, recoveries of delta-BHC exceeded the limit of 135% at 137%/(129%). All other recoveries and relative percent differences were within limits.
- In spike samples PW1BLK0904LCS/LCSD, recoveries of endosulfan I exceeded the limit of 110% at (107%)/111%. All other recoveries and relative percent differences were within limits.
- Sample 01GW0701D was missed for surrogate spiking. Results are reported at the request of the client.
- As is necessary for all GC/LC chromatography, manual integrations were performed to correctly quantitate target analytes. A "before" chromatogram and "after" chromatogram is provided for all sample analyses to provide information regarding the manual integrations performed.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Marcia K. McGinnity
Senior Project Manager

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.
- P:** The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported.
- M:** The presence of an "M" to the right of an analytical result indicates that the sample matrix interfered with the quantitation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.
- I:** The presence of an "I" to the right of an analytical result that the presence of a qualitative interference could have caused a false positive or over estimation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.

CHROMATOGRAPHIC FLAGS FOR MANUAL INTEGRATIONS

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

Herbicide Samples

Method: The samples were analyzed by USEPA SW-846 Methods 8151A (separatory funnel extraction then esterification and capillary column GC/ECD) for waters upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Some analytes in the continuing calibration verifications (CCVs) exceeded the 20 %D limit with a high bias. None of the affected target analytes were detected in the associated samples.
- Surrogate recoveries exceeded the limit of 140% as high as 166% in some of the RTX-CLP2 analyses. Spike recoveries were within limits and reported concentrations of silvex were taken from the RTX-CLP column with the exception of sample 01GW0701.
- As is necessary for all GC/LC chromatography, manual integrations were performed to correctly quantitate target analytes. A “before” chromatogram and “after” chromatogram is provided for all sample analyses to provide information regarding the manual integrations performed.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

QC Flag Legend

- a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
- Q - Qualifier signal failed the ratio test.

$$\text{Concentration} = \frac{A_x}{A_i} \times \frac{I_s}{RRF}$$

$$\frac{3963}{609752} \times \frac{30}{0.12553386} = 1.55321$$

A_x = Area of analyte
 A_i = Area of internal standard
 I_s = Concentration of internal standard
 RRF = Initial calibration relative response factor

A: The peak was manually integrated as it was not integrated in the original chromatogram.
B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
C: The peak was manually integrated to correct baseline from the original chromatogram.
D: The peak was manually integrated to identify the correct peak as the incorrect peak was identified in the original chromatogram.
E: The peak was manually integrated to include entire peak as the original chromatogram only integrated part of the peak.

Matrix Spike / Matrix Spike Duplicate Sample Results

The matrix spike / matrix spike duplicate percent recoveries for antimony were < 75% quality control limit. Nondetected results reported for antimony were qualified as estimated, "UJ".

Notes

None.

Executive Summary

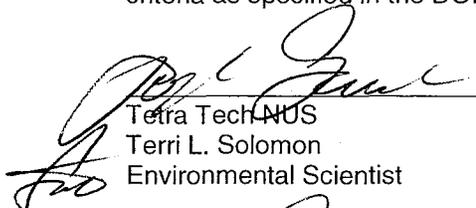

Laboratory Performance: None.

Other Factors Affecting Data Quality: The matrix spike / matrix spike duplicate percent recoveries for antimony were < 75% quality control limit.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DOD QSM."

Tetra Tech NUS

Quality Assurance Officer

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O - Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DOT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

INORGANIC CASE NARRATIVE
TETRA TECH NUS
SDG# Gulfport 009
Work Order # 0808142
August, 2008

Empirical Laboratories ID	Client ID
0808142-01	01SS01QT
0808142-02	01SS01QTDUP
0808142-03	01SS02QT
0808142-04	01SS03QT
0808142-05	01SS04QT
0808142-06	01SS05QT
0808142-07	01SS06QT

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Betty DeVille
Inorganic Lab Manager

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody included with this data package.

I. HOLDING TIMES

- A. Sample Preparation:** All holding times were met.
- B. Sample Analysis:** All holding times were met .

II. METHODS

US EPA SW846 Method 3050B was used to digest and method 6010B was used for analysis of ICAP metals. Method 7471A was used to digest and analyze mercury and method 9012A was used to distill and analyze cyanide. Note: The "U" flag indicates that the sample concentration is reported down to the laboratory MDL. The "B" flag indicates that the analyte result is between the laboratory reporting limit and the laboratory MDL. All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

III. PREPARATION

All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

**INORGANIC CASE NARRATIVE
TETRA TECH NUS
SDG# Gulfport 009
Work Order # 0808142
August, 2008**

IV. ANALYSIS

- A. **Calibration:** All calibration criteria were met.
- B. **Blanks:** All blank criteria were met.
- C. **Spikes:** All matrix spikes quality control criteria were met with the following exceptions: The matrix spike and the matrix spike duplicate were out of the specification limits of 75 to 125% at 40.9 and 41.4% for antimony on sample 01SS06QT. The post digestion spike recovery was at 102.3% for antimony. **All associated data are flagged with an "N" on the final report.**
- D. **Duplicates:** All duplicate quality control criteria were met.
- E. **Samples:** All sample analysis proceeded normally.
- F. **Laboratory Control Samples:** All percent recovery quality control criteria were met.

 Digestion by: KBG
 Analysis Date: 8/18/2008
 Analyst: KBG
 Analyst Authorization: KBG
 Method#: 245.177470A for H2O
 7471A for soils
 Method Type: Cold Vapor

Concentration (ug/L) = (Peak Height - intercept)/slope * dilution

Conversion for soils from concentration (ug/L) to mg/kg (wet weight) = concentration (ug/L) * final volume (mL)/initial weight (g) * 1L/1000mL * 1000g/1kg * 1g/1000mg

VOC

The continuing calibration run on 08/15/08 at 09:24 on instrument VOA1 had percent difference results outside of the quality control range of $\pm 25\%$ for methyl acetate and methyl tert-butyl ether. Non-detected results for these compounds were qualified as estimated (UJ) in the associated samples: 01SS01QT, 01SS01QTDUP, 01SS02QT, 01SS03QT, 01SS04QT, 01SS05QT, and 01SS06QT.

The following compound was detected in the method blanks at the following maximum concentration:

<u>Compound</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Methylene chloride	1.3 ug/kg	13 ug/kg

An action level of 10X the maximum concentration of methylene chloride was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less the action level were qualified as non-detected (U) for method blank contamination.

SVOC

The following compound was detected in the method blanks at the following maximum concentration:

<u>Compound</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Bis(2-ethylhexyl)phthalate	120 ug/kg	1200 ug/kg

An action level of 10X the maximum concentration of bis(2-ethylhexyl)phthalate was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results reported to be less the action level were qualified as non-detected (U) for method blank contamination.

Positive results for compounds reported to be below the quantitation limit but above the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

Originally, the SVOC initial calibration forms in this data package did not include percent relative standard deviations (RSD) results. The laboratory was contacted and provided these results at a later date.

PEST/PCB

The toxaphene initial calibration forms were originally missing from the data package. The laboratory was contacted, and the initial calibration forms were obtained and are included in this report.

Toxaphene was run as a single-component analyte in the initial calibration analysis. All results were non-detected, so the laboratory did not perform continuing calibration for toxaphene. However, the the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006) requires that continuing calibration verifications be run for all target analytes. Therefore, all non-detected toxaphene results were qualified as estimated (UJ).

The continuing calibration performed on 08/26/08 at 03:47 on Column ZB MR-1 (Column 1) had percent difference results outside the quality control acceptance range of $\pm 15\%$ for the following analytes:

Alpha-BHC	Delta-BHC	Aldrin
Heptachlor epoxide	Gamma-chlordane	Alpha-chlordane
Endosulfan I	4,4'-DDE	Dieldrin
Endrin	4,4'-DDD	Endosulfan II
Endrin Aldehyde	4,4'-DDT	Endosulfan sulfate
Methoxychlor	Endrin ketone	

Percent difference results for all analytes except for endrin ketone were within acceptance limits on Column ZB MR-2 (Column 2). Thus, the non-detected results for endrin ketone were qualified as estimated (UJ) in the affected samples (01SS01QT, 01SS01QTDUP, 01SS02QT, 01SS03QT, 01SS04QT, 01SS05QT, 01SS06QT).

The continuing calibration run on 08/26/08 at 04:06 on Column 1 had mean percent difference results outside of the acceptance range of $\pm 15\%$ for Aroclor-1016 and Aroclor-1260. No data were qualified because the percent difference results were within limits on Column 2.

The continuing calibration performed on 08/26/08 at 09:58 on Column 1 produced percent difference results outside of the acceptance range of $\pm 15\%$ for the following analytes:

Delta-BHC	Gamma-chlordane	Alpha-chlordane
Endosulfan I	4,4'-DDE	Dieldrin
Endrin	4,4'-DDD	Endosulfan II
Endrin aldehyde	4,4'-DDT	Endosulfan sulfate
Endrin ketone		

No data were qualified because all percent difference results were within limits on Column 2.

The continuing calibration run on 08/26/08 at 10:17 on Column 1 produced mean percent difference results outside of the quality control acceptance range of $\pm 15\%$ for Aroclor-1016 and Aroclor-1260. No action was taken for Aroclor-1016 because results for this analyte were compliant on Column 2. No action was taken for Aroclor-1260 because even though percent difference results from two individual peaks on Column 2 were outside the acceptance limits, the mean percent difference was within limits on Column 2.

The following analytes exceeded the maximum percent difference between columns (25%).

<u>Sample</u>	<u>Analyte</u>	<u>Percent Difference</u>
01SS04QT	Dieldrin	124%
01SS06QT	Endrin aldehyde	34%

The positive result for endrin aldehyde was qualified as estimated (J) because the percent difference was greater than 25% but less than 100%. The positive result for dieldrin was qualified as unusable (R) because the percent difference was greater than 100%.

Positive results for compounds reported to be below the quantitation limit but above the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

HERB

The laboratory control/laboratory control sample duplicate (LCS/LCSD) analysis had a LCSD percent recovery that was greater than the laboratory quality control limit for MCPA. No qualification was made because the LCS was within limits.

The continuing calibration run on 08/19/08 at 15:36 on Column RTX-CLP (Column 1) had percent difference results outside of the acceptance range of $\pm 15\%$ for MCPA and MCPA. No qualifications were made because these results were compliant in the corresponding continuing calibration (08/19/08 at 16:20) on Column RTX-CLP2 (Column 2).

The continuing calibration run on 08/19/08 at 16:20 on Column 2 had a percent difference result outside of the acceptance range of $\pm 15\%$ for 2,4,5-T. No action was taken because the result for this analyte was within limits in the corresponding calibration (08/19/08 at 15:36) on Column 1.

The continuing calibration run on 08/19/08 at 22:47 on Column 1 had percent difference results outside of the acceptance range for MCPA, MCPA, and 2,4-DB. Similarly, percent difference results were also outside of the acceptance range for these analytes in the corresponding continuing calibration on Column 2 (08/19/08 at 23:26). All samples were affected. Positive results and non-detected results for these analytes were

qualified as estimated (J and UJ, respectively) in all samples.

The continuing calibration run on 08/19/08 at 23:26 on Column 2 also had percent difference results outside of the $\pm 15\%$ acceptance range for dichloroprop and 2,4-D. No action was taken for these results because the percent difference results for these analytes were within limits in the corresponding calibration on Column 1 (08/19/08 at 22:47).

The following analytes exceeded the maximum percent difference between columns (25%).

<u>Sample</u>	<u>Analyte</u>	<u>Percent Difference</u>
01SS03QT	2,4-DB	155.3%
	Dinoseb	37.9%
01SS04QT	2,4-DB	128.3%

The positive result for dinoseb was qualified as estimated (J) because the percent difference was greater than 25% but less than 100%. The positive results for 2,4-DB were qualified as unusable (R) because the percent difference was greater than 100%.

Positive results for compounds reported to be below the quantitation limit but above the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

Although continuing calibrations run on 08/19/08 at 22:47 on Column 1 and 23:26 on Column 2 do not appear on their respective analytical sequences, these calibrations do appear in the run logs and apply to the samples in this SDG.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several VOCs, pesticides, and herbicides were qualified due to calibration noncompliances. Analytes in the VOC and SVOC fractions were qualified due to method blank contamination. Several pesticides and herbicides were qualified due to percent differences between columns.

Other Factors Affecting Data Quality: Several analytes were qualified as estimated due to uncertainty near the detection limits.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99), and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for Environmental Laboratories.

- Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
- Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 5035/8260B (EnCore field sampling with lab preservation followed by purge and trap then capillary column GC/MS) for soils or 5030B/8260B (purge and trap followed by capillary column GC/MS) for waters upon receipt to the laboratory in satisfactory condition.

Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The soil method blank associated with these samples has a reported concentration of methylene chloride at a concentration less than 1/2 the quantitation limit. Reported concentrations in the associated samples are qualified with a "B".

Semivolatiles

Method: The samples were analyzed by USEPA SW-846 Methods 3541/8270C (automated soxhlet extraction followed by capillary column GC/MS) for soils upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- In the initial calibration verification, 3,3'-dichlorobenzidine exceeded 25% difference with a positive bias. It was not detected in the associated samples.
- Bis(2-ethylhexyl)phthalate was detected in the method blank at a concentration less than 1/2 the quantitation limit. Reported concentrations in the associated samples are qualified with a "B".

Pesticides/PCBs

Method: The samples were analyzed by USEPA SW-846 Methods 3550C/8081A/8082 (sonication extraction followed by capillary column GC/ECD) for soils upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Analyses of the samples were completed using full calibration for 1016/1260. As no other aroclor patterns were identified, no other aroclor calibration checks were performed.
- Some analytes in the continuing calibration verifications (CCVs) exceeded the 20%D limit with a positive bias. In most cases, the analyte was not detected above the quantitation limit and surrogate recoveries were determined not to have been biased into control by the exceedences. For the reported concentration of

4,4'-DDT in sample 01SS04QT, the higher concentration came from the column that met criteria. No further action was deemed necessary.

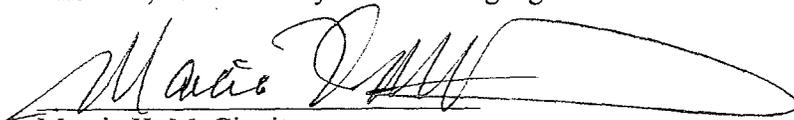

Herbicide Samples

Method: The samples were analyzed by USEPA SW-846 Methods 8151A (sonication and separatory funnel extraction then esterification and capillary column GC/ECD) for soils upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Some analytes in the initial calibration verification (ICV) or continuing calibration verifications (CCVs) exceeded the 20 %D limit with a high bias. No target analytes were detected in the associated samples.
- In spike samples HS1BLK0818LCS/LCSD, recoveries of MCPA exceeded the limit of 115% at (114%)/120%. All other recoveries were within limits.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

A handwritten signature in black ink, appearing to read "Marcia K. McGinnity", written over a horizontal line.

Marcia K. McGinnity
Senior Project Manager

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.
- P:** The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported.
- M:** The presence of an "M" to the right of an analytical result indicates that the sample matrix interfered with the quantitation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.
- I:** The presence of an "I" to the right of an analytical result that the presence of a qualitative interference could have caused a false positive or over estimation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.

the quality control limit for both PCB-1016 and PCB-1260. No sample data qualification was necessary as all SDG samples had non-detected results for all PCBs and the primary GC column had within the QC limit % recovery for surrogate tetrachloro-m-xylene.

Notes

There was no matrix spike / matrix spike duplicate performed on this SDG.

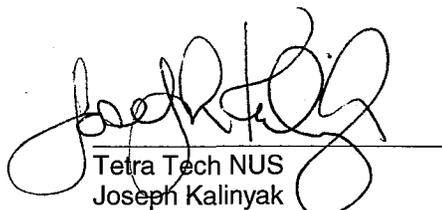

Executive Summary

Laboratory Performance: The LCS had a % recovery QC limit exceedance for both PCB-1016 and PCB-1260 which did not affect the SDG samples.

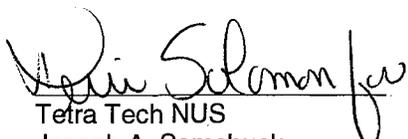

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October 1999) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD Guidelines."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

COOLER RECEIPT FORM

LIMS Number: 0810384 Number of Coolers: 1 of 1
Client: Tetra Tech IUVS Project: Site 1
Date/Time Received: 10/30/08 09:00 Date cooler(s) opened: 10/30/08
Opened By (print): WILLIAM SCHWAB (signature): [Signature]

Circle response below as appropriate

1. How did the samples arrive?: FedEx UPS DHL Hand Delivered
EL Courier Other: _____

If applicable, enter airbill number here: 2615

2. Were custody seals on outside of cooler(s)? Yes No
How many: 1 Seal date: 10/29/08 Seal Initials: ?

3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
7. Was project identifiable from custody papers? Yes No N/A
8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE Temperature of Samples upon Receipt: 2-4°C

Dates samples were logged-in: 10/30/08

9. Initial this form to acknowledge login of sample(s): (Name): WILLIAM SCHWAB (Initial): WS

10. Were all bottle lids intact and sealed tightly? Yes No N/A
11. Did all bottles arrive unbroken? Yes No N/A
12. Was all required bottle label information complete? Yes No N/A
13. Did all bottle labels agree with custody papers? Yes No N/A
14. Were correct containers used for the analyses indicated? Yes No N/A
15. Were preservative levels correct in all applicable sample containers? Yes No N/A
16. Was sufficient amount of sample sent for the analyses required? Yes No N/A
17. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

sample collection ~~for~~ dates taken from container labels.

PCB Soil Samples

Method: The samples were analyzed by USEPA SW-846 Methods 3541/8082 (soxtherm extraction followed by capillary column GC/ECD) for IDW soils upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following exceptions:

- Initial Calibration Criteria: All method criteria were met.
- Continuing Calibration Criteria: All analytes were within 20% difference or exceeded with a positive bias and were non-detect.
- Blank Results: No target analytes were detected in the method blank.
- Surrogate Recoveries: All DCB surrogate recoveries were within limits. TCMX recoveries are not evaluated for PCBs.
- LCS/LCSD Results: All recoveries and relative percent differences were within limits or exceeded with a positive bias and were non-detect.
- MS/MSD Results: Not applicable.
- Dilutions: Not applicable.
- Manual Integrations: As is necessary for all GC/LC chromatography, manual integrations were performed to correctly quantitate target analytes. A "before" chromatogram and "after" chromatogram is provided for all sample analyses to provide information regarding the manual integrations performed.

I certify that, to the best of my knowledge and based upon my inquiry of those individuals immediately responsible for obtaining the information, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

Marcia K. McGinnity
Senior Project Manager

ANALYTICAL REPORT TERMS AND QUALIFIERS (ORGANIC)

- MDL:** The method detection limit (MDL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The MDL is determined from analysis of a sample containing the analyte in a given matrix.
- EQL:** The estimated quantitation limit (EQL), also known as the reporting limit (RL), is defined as the estimated concentration above which quantitative results can be obtained with a specific degree of confidence. Empirical Laboratories defines the EQL to be at or near the lowest standard of the calibration curve.
- U:** The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the MDL.
- B:** The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.
- D:** When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".
- E:** The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound.
- J:** The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the EQL. One should feel confident that the result is greater than zero and less than the EQL.
- P:** The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported.
- M:** The presence of an "M" to the right of an analytical result indicates that the sample matrix interfered with the quantitation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.
- I:** The presence of an "I" to the right of an analytical result that the presence of a qualitative interference could have caused a false positive or over estimation of the analyte. In GC and HPLC, results are reported from the column with the lower concentration.

CHROMATOGRAPHIC FLAGS FOR MANUAL INTEGRATIONS

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SAMPLES: 14/Soil

01SBDIT01	01SBIT02	01SBDIT03
01SS01401	01SS01401DUP	01SS01501
01SS01701	01SS02401	01SS02501
01SS13701	01SS13801	01SS13901
01SS13901DUP	01SS42001	

Overview

The sample set for CTO 0065, NCBC Gulfport, SDG GULFPORT012, consists of fourteen (14) soil environmental samples. Two (2) field duplicate pairs (01SS01401 / 01SS01401DUP and 01SS13901 / 01SS13901DUP) were included within this SDG.

All samples were analyzed for Target Analyte List (TAL) metals and cyanide. The samples were collected by Tetra Tech NUS on September 30 and October 1, 2008. Metals and cyanide were analyzed by Empirical Laboratories and analyzed under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Metals analyses were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 method 7471A. Cyanide analyses were conducted using SW-846 method 9012A.

These data were evaluated based on the following parameters:

- * • Data Completeness
- * • Holding Times
- Calibration Verification Results
- * • Laboratory Blank Analyses
- * • ICP Interference Check Sample Results
- Matrix Spike / Matrix Spike Duplicate Sample Results
- * • Post Digestion Spike Sample Results
- * • Laboratory Duplicate Sample Results
- * • Laboratory Control Sample Results
- ICP Serial Dilution Results
- Field Duplicate Sample Results
- * • Sample Quantitation
- * • Detection Limits

* - All quality control criteria were met for this parameter.

TO: R. FISHER – PAGE 2
DATE: NOVEMBER 25, 2008

Matrix Spike / Matrix Spike Duplicate Sample Results

The matrix spike / matrix spike duplicate percent recoveries for antimony were < 75% quality control limit. Positive and nondetected results reported for antimony were qualified as estimated, "J" and "UJ", respectively.

ICP Serial Dilution Results

The ICP serial dilution percent difference was > 10% and the sample result was > 50X instrument detection limit for lead. The positive results reported for lead were qualified as estimated, "J".

Field Duplicate Results

Field duplicate imprecision (RPD > 50%) was noted for iron for sample pair 01SS13901 / 01SS13901DUP. The positive results reported for iron for samples 01SS13901 and 01SS13901DUP were qualified as estimated, "J".

Notes

The continuing calibration percent recovery for sodium was > 110% quality control limit affecting sample 01SS13901DUP. However, no validation actions are required as the result reported for sodium was nondetected.

The Contract Required Detection Limit (CRDL) percent recoveries for selenium, lead and thallium were > 100% quality control limit. However, no validation actions are required for this noncompliance.

The matrix spike / matrix spike duplicate percent recoveries for potassium were > 125% quality control limit for potassium. However, no validation actions are required as all potassium results were nondetects.

Executive Summary

Laboratory Performance: None.

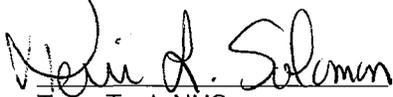

Other Factors Affecting Data Quality: The matrix spike / matrix spike duplicate percent recoveries for antimony were < 75% quality control limit. The ICP serial dilution percent difference was > 10% for lead. Field duplicate imprecision (RPD > 50%) was noted for iron for sample pair 01SS13901 / 01SS13901DUP.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DOT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in the case narrative, as verified by the following signature.

 Betty DeVille
 Inorganic Lab Manager

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody included with this data package.

I. HOLDING TIMES

- A. Sample Preparation:** All holding times were met.
- B. Sample Analysis:** All holding times were met .

II. METHODS

US EPA SW846 Method 3050B was used to digest and method 6010B was used for analysis of ICAP metals. Method 7471A was used to digest and analyze mercury and method 9012A was used to distill and analyze cyanide. Note: The "U" flag indicates that the sample concentration is reported down to the laboratory MDL. The "J" flag indicates that the analyte result is between the

laboratory reporting limit and the laboratory MDL. All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

III. PREPARATION

All methods performed according to EPA guidelines and Empirical Laboratories Standard Operating Procedures.

IV. ANALYSIS

A. Calibration: All calibration criteria were met with the following exception: The initial calibration verification and first CCV for cyanide on the first cyanide analysis was out of the specification limits of 90 to 110% for cyanide at 111.0 and 112.4%. All sample concentrations were less than the MDL. There is no impact to the sample data.

The second and fourth CCV on the first ICAP analysis was out of the specification limits of 90 to 110% for potassium at 110.8 and 111.0%. The second CCV impacts 01SS01701, 01SS42001, 01SS01401, 01SS01401 DUP, 01SS01501, 01SS02401, 01S02501, 01SS13701, 01SS13801, 01SS13901 and their associated QC. The fourth CCV impacts 01SS13901 DUP.

B. Blanks: All blank criteria were met.

C. Spikes: All matrix spikes quality control criteria were met with the following exceptions: The matrix spike and the matrix spike duplicate were out of the specification limits for antimony at 58.4 and 61.7% and for potassium at 126.6 and 126.1% on sample 01SS02501. The post digestion spike recovery was at 97.8% for antimony and 120.9% for potassium. **All associated data are flagged with an "N" on the final report.**

D. Duplicates: All duplicate quality control criteria were met.

E. Samples: All sample analysis proceeded normally.

F. Laboratory Control Samples: All percent recovery quality control criteria were met.

Method#: 245.1/7470A for H2O

7471A for soils

Method Type: Cold Vapor

Concentration (ug/L) = (Peak Height - intercept)/slope * dilution

Conversion for soils from concentration (ug/L) to mg/kg (wet weight) = concentration (ug/L) * final volume (mL)/initial weight (g) * 1L/1000mL * 1000g/1kg * 1g/1000mg

Selection of Exposure Pathways

TABLE 1
SELECTION OF EXPOSURE PATHWAYS
NCBC GULFPORT
GULFPORT, MISSISSIPPI
PAGE 1 OF 3

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future or Future	Surface Soil	Surface Soil	Site 1	Construction Workers	Adult	Ingestion Dermal	Quant Quant	Construction workers may have contact with surface soil during excavation activities.
				Maintenance Worker	Adult	Ingestion Dermal	Quant Quant	Maintenance workers may contact surface soil during normal work activities.
				Industrial Worker	Adult	Ingestion Dermal	Quant Quant	Industrial workers may contact surface soil during normal work activities.
				Trespassers	Adolescents	Ingestion Dermal	Quant Quant	Trespassers may contact surface soil while at the site.
					Adult	Ingestion Dermal	Quant Quant	Trespassers may contact surface soil while at the site.
		Air	Site 1	Construction Workers	Adult	Inhalation	None	No COPCs were identified in surface soil for the inhalation exposure pathway.
				Maintenance Worker	Adult	Inhalation	None	No COPCs were identified in surface soil for the inhalation exposure pathway.
				Industrial Worker	Adult	Inhalation	None	No COPCs were identified in surface soil for the inhalation exposure pathway.
				Trespassers	Adolescents	Inhalation	None	No COPCs were identified in surface soil for the inhalation exposure pathway.
					Adult	Inhalation	None	No COPCs were identified in surface soil for the inhalation exposure pathway.
	Subsurface Soil	Subsurface Soil	Site 1	Construction Workers	Adult	Ingestion Dermal	Quant Quant	Construction workers may have contact with subsurface soil during excavation activities.
				Maintenance Worker	Adult	Ingestion Dermal	Quant Quant	Although exposures to subsurface soil by maintenance workers is considered unlikely at the site this scenario is included to aid in future risk management decisions.
				Industrial Worker	Adult	Ingestion Dermal	Quant Quant	Although exposures to subsurface soil by industrial workers is considered unlikely at the site this scenario is included to aid in future risk management decisions.
				Trespassers	Adolescents	Ingestion Dermal	Quant Quant	Although exposures to subsurface soil by adolescent trespassers is considered unlikely at the site this scenario is included to aid in future risk management decisions.
					Adult	Ingestion Dermal	Quant Quant	Although exposures to subsurface soil by adult trespassers is considered unlikely at the site this scenario is included to aid in future risk management decisions.
		Air	Site 1	Construction Workers	Adult	Inhalation	None	No COPCs were identified in subsurface soil for the inhalation exposure pathway.
				Maintenance Worker	Adult	Inhalation	None	No COPCs were identified in subsurface soil for the inhalation exposure pathway.
				Industrial Worker	Adult	Inhalation	None	No COPCs were identified in subsurface soil for the inhalation exposure pathway.
				Trespassers	Adolescents	Inhalation	None	No COPCs were identified in subsurface soil for the inhalation exposure pathway.
					Adult	Inhalation	None	No COPCs were identified in subsurface soil for the inhalation exposure pathway.
Groundwater	Groundwater	Site 1	Construction Workers	Adult	Ingestion Dermal	None Quant	Construction workers are not expected to ingest groundwater. Construction workers may have dermal contact with groundwater during excavation activities.	
			Maintenance Workers	Adult	Ingestion Dermal	None None	Maintenance workers are not expected to have contact with groundwater.	

TABLE 1
SELECTION OF EXPOSURE PATHWAYS
NCBC GULFPORT
GULFPORT, MISSISSIPPI
PAGE 2 OF 3

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway		
Current/Future or Future	Groundwater	Groundwater	Site 1	Industrial Worker	Adult	Ingestion Dermal	None None	Industrial workers are not expected to have contact with groundwater.		
				Trespassers	Adolescents	Ingestion Dermal	None None	Adolescent trespassers are not expected to be exposed to groundwater.		
					Adult	Ingestion Dermal	None None	Adult trespassers are not expected to be exposed to groundwater.		
	Air	Air	Site 1	Construction Workers	Adult	Inhalation	Quant	Construction workers may be exposed to COPCs that have volatilized from groundwater during excavation activities.		
				Maintenance Workers	Adult	Inhalation	None	Maintenance workers are not expected to be exposed to COPCs that have volatilized from groundwater.		
				Industrial Worker	Adult	Inhalation	None	Industrial workers are not expected to be exposed to COPCs that have volatilized from groundwater.		
				Trespassers	Adolescents	Inhalation	None	Adolescent trespassers are not expected to be exposed to COPCs that have volatilized from groundwater.		
					Adult	Inhalation	None	Adolescent trespassers are not expected to be exposed to COPCs that have volatilized from groundwater.		
			Vapor Intrusion	Industrial Worker	Adult	Inhalation	None	Industrial workers are not expected to be exposed to COPCs that have volatilized from groundwater and migrated through building foundations into indoor air.		
			Surface Water	Surface Water	Site 1	Construction Workers	Adult	Ingestion Dermal	Quant Quant	Construction workers may have contact with surface water during excavation activities.
	Maintenance Worker	Adult				Ingestion Dermal	Quant Quant	Maintenance workers may contact surface water during normal work activities.		
	Industrial Worker	Adult				Ingestion Dermal	Quant Quant	Industrial workers may contact surface water during normal work activities.		
	Trespassers	Adolescents				Ingestion Dermal	Quant Quant	Adolescent trespassers may contact surface water while at the site.		
		Adult				Ingestion Dermal	Quant Quant	Adult trespassers may contact surface water while at the site.		
	Sediment	Sediment				Site 1	Construction Workers	Adult	Ingestion Dermal	Quant Quant
Maintenance Worker							Adult	Ingestion Dermal	Quant Quant	Maintenance workers may contact sediment during normal work activities.
Industrial Worker							Adult	Ingestion Dermal	Quant Quant	Industrial workers may contact sediment during normal work activities.
Trespassers			Adolescents	Ingestion Dermal	Quant Quant		Adolescent trespassers may contact sediment while at the site.			
			Adult	Ingestion Dermal	Quant Quant		Adult trespassers may contact sediment while at the site.			
Future	Surface Soil	Surface Soil	Site 1	Residents	Child	Ingestion Dermal	Quant Quant	Although a future residential scenario is considered unlikely at the site this scenario is included to aid in future risk management decisions.		
					Adult	Ingestion Dermal	Quant Quant	Although a future residential scenario is considered unlikely at the site this scenario is included to aid in future risk management decisions.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - No site-specific background soil data were available for NCBC Gulfport.
- 5 - Mississippi Department of Environmental Quality (MDEQ), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Unrestricted and Restricted Land Use, February 2002. Noncarcinogenic values are divided by 10.
- 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Residential Soil. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April 2009).
- 7 - USEPA Soil Screening Levels (SSLs), EPA Internet Site at http://risk.lsd.org/govcalc_start.htm.
- 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.
- 9 - Values are for chlordane.
- 10 - Values are for alpha-BHC.
- 11 - Values are for endosulfan.
- 12 - Values are for endrin.
- 13 - Values are for hexavalent chromium.
- 14 - Ten percent of the noncarcinogenic value is less than the carcinogenic value, therefore the noncarcinogenic is presented.
- 15 - Values are for mercury, inorganic salts.

Definitions:

- C = Carcinogen
- COPC = Chemical Of Potential Concern
- J = Estimated value
- N = Noncarcinogen
- NA = Not Applicable/Not Available
- S = Concentration may exceed Csat
- sat = soil saturation concentration

Rationale Codes:

- For selection as a COPC:
- ASL = Above Screening Level
- For elimination as a COPC:
- BSL = Below COPC Screening Level
- NUT = Essential nutrient
- NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the

Footnotes:

1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.

Definitions:

C = Carcinogen
 COPC = Chemical Of Potential Concern

TABLE 2.2
 OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN - MIGRATION TO GROUNDWATER - SURFACE SOIL
 NCBC GULFPORT
 GULFPORT, MISSISSIPPI

Scenario Timeframe: Current/Future
 Medium: Surface Soil
 Exposure Medium: Surface Soil

Exposure Point	CAS Number	Chemical	Minimum Concentration ⁽¹⁾	Maximum Concentration ⁽¹⁾	Units	Sample of Maximum Concentration	Frequency of Detection ⁽¹⁾	Range of Nondetects ⁽²⁾	Concentration Used for Screening ⁽³⁾	Maximum Background Concentration ⁽⁴⁾	ORNL SSLs for Migration to Groundwater ⁽⁵⁾	COPC Flag	Rationale for Contaminant Deletion or Selection ⁽⁶⁾
----------------	------------	----------	--------------------------------------	--------------------------------------	-------	---------------------------------	---------------------------------------	------------------------------------	-------------------------------------------------	-------------------------------------------------	-------------------------------------------------------	-----------	----------------------------------------------------------------

2 - Values presented are sample-specific quantitation limits.

3 - The maximum detected concentration is used for screening purposes.

4 - No site-specific background soil data were available for NCBC Gulfport.

5 - Oak Ridge National Laboratory Regional Screening Levels for Chemical Contaminants at Superfund Sites, Risk-based soil screening level for migration to groundwater, April, 2009.

6 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

7 - Values are for chlordane.

8 - Values are for alpha-BHC.

9 - Values are for endosulfan.

10 - Values are for endrin.

11 - Values are for hexavalent chromium.

12 - Values are for mercury, inorganic salts.

J = Estimated value

N = Noncarcinogen

NA = Not Applicable/Not Available

S = Concentration may exceed Csat

sat = soil saturation concentration

Rationale Codes:

For selection as a COPC:

ASL = Above Screening Level

For elimination as a COPC:

BSL = Below COPC Screening Level

NUT = Essential nutrient

NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - No site-specific background soil data were available for NCBC Gulfport.
- 5 - Mississippi Department of Environmental Quality (MDEC), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Unrestricted and Restricted Land Use, February 2002. Noncarcinogenic values are divided by 10.
- 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Residential Soil. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April 2009).
- 7 - USEPA Soil Screening Levels (SSLs), EPA Internet Site at http://risk.lsd.ornl.gov/calc_start.htm.
- 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.
- 9 - Values are for chlordane.
- 10 - Values are for alpha-BHC.
- 11 - Values are for endosulfan.
- 12 - Values are for endrin.
- 13 - Values are for hexavalent chromium.
- 14 - Ten percent of the noncarcinogenic value is less than the carcinogenic value, therefore the noncarcinogenic is presented.
- 15 - Values are for mercury, inorganic salts.

Definitions:

C = Carcinogen
 COPC = Chemical Of Potential Concern
 J = Estimated value
 N = Noncarcinogen
 NA = Not Applicable/Not Available
 S = Concentration may exceed Csat
 sat = soil saturation concentration

Rationale Codes:

For selection as a COPC:
 ASL = Above Screening Level
 For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - No site-specific background soil data were available for NCBC Gulfport.
- 5 - Oak Ridge National Laboratory Regional Screening Levels for Chemical Contaminants at Superfund Sites, Risk-based soil screening level for migration to groundwater, April 2009.
- 6 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

Definitions:

- C = Carcinogen
- COPC = Chemical Of Potential Concern
- J = Estimated value
- N = Noncarcinogen
- NA = Not Applicable/Not Available
- S = Concentration may exceed Csat
- sat = soil saturation concentration

TABLE 2.4
 OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN - MIGRATION TO GROUNDWATER - SUBSURFACE SOIL
 NCBC GULFPORT
 GULFPORT, MISSISSIPPI

Scenario Timeframe: Current/Future
Medium: Subsurface Soil
Exposure Medium: Subsurface Soil

Exposure Point	CAS Number	Chemical	Minimum Concentration ⁽¹⁾	Maximum Concentration ⁽¹⁾	Units	Sample of Maximum Concentration	Frequency of Detection ⁽¹⁾	Range of Nondetects ⁽²⁾	Concentration Used for Screening ⁽³⁾	Maximum Background Concentration ⁽⁴⁾	ORNL SSLs for Migration to Groundwater ⁽⁵⁾	COPC Flag	Rationale for Contaminant Deletion or Selection ⁽⁶⁾
----------------	------------	----------	--------------------------------------	--------------------------------------	-------	---------------------------------	---------------------------------------	------------------------------------	-------------------------------------------------	-------------------------------------------------	-------------------------------------------------------	-----------	----------------------------------------------------------------

7 - Values are for chlordane.
 8 - Values are for alpha-BHC.
 9 - Values are for endosulfan.
 10 - Values are for endrin.
 11 - Values are for hexavalent chromium.
 12 - Values are for mercury, inorganic salts.

Rationale Codes:
 For selection as a COPC:
 ASL = Above Screening Level
 For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - A comparison of maximum concentrations was conducted between the site and background datasets. The maximum background concentration is shaded if the maximum site concentration exceeds the maximum background concentration. Samples 01TW0101, 01QT1101, 01QT1101-AVG, 01QT1101-D, 01QT1201, and 01QT1301 were used as the background dataset.
- 5 - Mississippi Department of Environmental Quality (MDEQ), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Groundwater, February 2002. Noncarcinogenic values are divided by 10.
- 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Tapwater. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April 2009).
- 7 - 2006 Edition of the Drinking Water Standards and Health Advisories (USEPA, August 2006). SMCLs are presented for reference purposes only.
- 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

Definitions:

- ARAR/TBC = Applicable or Relevant and Appropriate Requirements To Be Considered
 C = Carcinogen
 COPC = Chemical Of Potential Concern
 DPT = Direct Push Technology
 J = Estimated value
 MCL = Maximum Contaminant Level
 N = Noncarcinogen
 NA = Not Applicable/Not Available
 S = Concentration may exceed Csat
 sat = soil saturation concentration
 SMCL = Secondary Maximum Contaminant Level

Rationale Codes:

- For selection as a COPC:
 ASL = Above Screening Level
 For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:
 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
 2 - Values presented are sample-specific quantitation limits.
 3 - The maximum detected concentration is used for screening purposes.
 4 - A comparison of maximum concentrations was conducted between the site and background datasets. The maximum background concentration is shaded if the maximum site concentration exceeds the maximum background concentration. Sample 01GW2301 was used as the background dataset.
 5 - Mississippi Department of Environmental Quality (MDEQ), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Groundwater, February 2002. Noncarcinogenic values are divided by 10.
 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Tapwater. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April 2009).
 7 - 2006 Edition of the Drinking Water Standards and Health Advisories (USEPA, August 2006).
 SMCLs are presented for reference purposes only.
 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.
 9 - Values are for atrazine.
 10 - Values are for hexavalent chromium.
 11 - The MCL for this parameter is actually a treatment technique. The SDWA action level (at the tap) has been presented.

Definitions:
 ARAR/TBC = Applicable or Relevant and Appropriate Requirements To Be Considered
 C = Carcinogen
 COPC = Chemical Of Potential Concern
 J = Estimated value
 MCL = Maximum Contaminant Level
 N = Noncarcinogen
 NA = Not Applicable/Not Available
 S = Concentration may exceed Csat
 sat = soil saturation concentration
 SMCL = Secondary Maximum Contaminant Level

Rationale Codes:
 For selection as a COPC:
 ASL = Above Screening Level
 For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 NTX = No toxicity criteria

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - A comparison of maximum concentrations was conducted between the site and background datasets. The maximum background concentration is shaded if the maximum site concentration exceeds the maximum background concentration. Samples 01TW0101, 01QT1101, 01QT1101-AVG, 01QT1101-D, 01QT1201, and 01QT1301 were used as the background dataset.
- 5 - Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soils. November 2002. EPA530-F-02-052. Values are from Table 2c (values for tetrachloroethene and trichloroethene are from Table 2a) and correspond to a target cancer risk level of 1E-6 or HI = 1 and an attenuation factor of 0.001.
- 6 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

Definitions:

- C = Carcinogen
- COPC = Chemical Of Potential Concern
- DPT = Direct Push Technology
- J = Estimated value
- MCL = Maximum Contaminant Level
- N = Noncarcinogen
- NA = Not Applicable/Not Available
- S = Concentration may exceed Csat
- sat = soil saturation concentration

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - No site-specific background sediment data were available for NCBC Gulfport.
- 5 - Mississippi Department of Environmental Quality (MDEQ), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Groundwater, February 2002. Noncarcinogenic values are divided by 10.
- 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Tapwater. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April, 2009).
- 7 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations and as one sample when determining the frequency of detection and average results.
 - 2 - Values presented are sample-specific quantitation limits.
 - 3 - The maximum detected concentration is used for screening purposes.
 - 4 - No site-specific background sediment data were available for NCBC Gulfport.
 - 5 - Mississippi Department of Environmental Quality (MDEQ), Risk Evaluation Procedures for Voluntary Cleanup and Redevelopment of Brownfield Sites for Unrestricted and Restricted Land Use, February 2002. Noncarcinogenic values are divided by 10.
 - 6 - Oak Ridge National Laboratory (ORNL) Regional Screening Level for Residential Soil. The noncarcinogenic values (denoted with a "N" flag) are the screening level divided by 10 to correspond to a target hazard quotient of 0.1. Carcinogenic values represent an incremental cancer risk of 1.0E-06 (carcinogens denoted with a "C" flag) (ORNL, April, 2009).
 - 7 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.
 - 8 - Values are for pyrene.
 - 9 - Values are for chlordane.
 - 10 - Values are for alpha-BHC.
 - 11 - Values are for hexavalent chromium.
 - 12 - Ten percent of the noncarcinogenic value is less than the carcinogenic value, therefore the noncarcinogenic is presented.
- Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Definitions:
 C = Carcinogen
 COPC = Chemical Of Potential Concern
 J = Estimated value
 N = Noncarcinogen
 NA = Not Applicable/Not Available
 S = Concentration may exceed Csat
 sat = soil saturation concentration

Rationale Codes:
 For selection as a COPC:
 ASL = Above Screening Level
 For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 NTX = No toxicity criteria

TABLE 3.1.RME
EXPOSURE POINT CONCENTRATION SUMMARY
REASONABLE MAXIMUM EXPOSURE
NCBC GULFPORT, GULFPORT, MISSISSIPPI

Scenario Timeframe: Current/Future
Medium: Surface Soil
Exposure Medium: Surface Soil

Exposure Point	Chemical of Potential Concern	Units	Arithmetic Mean	95% UCL (Distribution)	Maximum Concentration (Qualifier)	Exposure Point Concentration			
						Value	Units	Statistic	Rationale ⁽¹⁾
Site 1	Dieldrin	mg/kg	0.02	0.3 (NP)	0.46 J	0.3	mg/kg	99% Chebyshev(Mean, Std) UCL	ProUCL
	Aluminum	mg/kg	6720	7780 (N)	12300	7780	mg/kg	Student-t	ProUCL
	Antimony	mg/kg	0.73	1 (NP)	3.6 J	1	mg/kg	Student-t or Modified-t UCL	ProUCL
	Arsenic	mg/kg	1.7	2.2 (G)	4.8	2.2	mg/kg	Approximate Gamma 95% UCL	ProUCL
	Cobalt	mg/kg	0.86	2.2 (NP)	6.8	2.2	mg/kg	95% Chebyshev(Mean, Std) UCL	ProUCL
	Iron	mg/kg	3620	4330 (N)	9050	4330	mg/kg	Student-t	ProUCL
	Manganese (Soil)	mg/kg	31.8	55.4 (L)	358	55.4	mg/kg	95% Chebyshev(MVUE) UCL	ProUCL

For non-detects, 1/2 sample quantitation limit was used as a proxy concentration; for duplicate sample results, the average value was used in the calculation.

G = Gamma
L = Lognormal
N = Normal
NP = Non-parametric

1. Exposure point concentration is the value recommended by USEPA's ProUCL. The maximum detected concentration is used if the recommended UCL is greater than the maximum or if the dataset contains less than 10 samples.

Exposure point concentrations for the RME scenarios are also the exposure point concentrations for the CTE scenarios.

TABLE 3.2.RME
 EXPOSURE POINT CONCENTRATION SUMMARY
 REASONABLE MAXIMUM EXPOSURE
 NCBC GULFPORT, GULFPORT, MISSISSIPPI

Scenario Timeframe: Current/Future
Medium: Subsurface Soil
Exposure Medium: Subsurface Soil

Exposure Point	Chemical of Potential Concern	Units	Arithmetic Mean	95% UCL (Distribution)	Maximum Concentration (Qualifier)	Exposure Point Concentration			
						Value	Units	Statistic	Rationale ⁽¹⁾
Site 1	Aroclor-1242	mg/kg	0.35	NA	2.4 J	2.4	mg/kg	Maximum Concentration	< 10 Samples
	Aluminum	mg/kg	5610	NA	9700	9700	mg/kg	Maximum Concentration	< 10 Samples
	Arsenic	mg/kg	1.2	NA	2	2	mg/kg	Maximum Concentration	< 10 Samples

For non-detects, 1/2 sample quantitation limit was used as a proxy concentration; for duplicate sample results, the average value was used in the calculation.

1. The maximum concentration was used as the EPC because the dataset contained less than 10 samples for each of the COPCs.

Exposure point concentrations for the RME scenarios are also the exposure point concentrations for the CTE scenarios.

TABLE 3.3.RME

Unit Intake Calculations

Incidental Ingestion Intake = (IR-S x CF3 x FI x EF x ED)/(BW x AT)

Dermal Intake = (CF3 x SA x SSAF x EF x ED)/(BW x AT)

Cancer Ingestion Intake = 4.61E-08 Cancer Dermal Intake = 1.38E-07

Noncancer Ingestion Intake = 3.23E-06 Noncancer Dermal Intake = 9.69E-06

Cancer risk from ingestion = Soil concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor

Cancer risk from dermal contact = Soil concentration x Cancer Dermal Intake x Absorption Factor x Dermal Cancer Slope Factor

Hazard Index from ingestion = Soil concentration x Noncancer Ingestion Intake / Oral Reference Dose

Hazard Index from dermal contact = Soil concentration x Noncancer Dermal Intake x Absorption Factor / Dermal Reference Dose

Unit Intake Calculations

Dermal Intake = (SA x EV x EF x ED)/(BW x AT)

Cancer Dermal Intake = 2.77E-02

Noncancer Dermal Intake = 1.94E+00

Cancer risk from dermal contact = Groundwater concentration x Cancer Dermal Intake x DAevent x Dermal Cancer Slope Factor

Hazard Index from dermal contact = Groundwater concentration x Noncancer Dermal Intake x DAevent / Dermal Reference Dose

TABLE 4.3.RME

- USEPA, 2004: Risk Assessment Guidance for Superfund (Part E, Supplemental Guidance for Dermal Risk Assessment) Final. EPA/540/R/99/005.

Unit Intake Calculations

$$\text{Incidental Ingestion Intake} = (\text{IR-S} \times \text{CF3} \times \text{FI} \times \text{EF} \times \text{ED}) / (\text{BW} \times \text{AT})$$

$$\text{Dermal Intake} = (\text{CF3} \times \text{SA} \times \text{SSAF} \times \text{EF} \times \text{ED}) / (\text{BW} \times \text{AT})$$

$$\text{Cancer Ingestion Intake} = 5.51\text{E-}08$$

$$\text{Cancer Dermal Intake} = 7.27\text{E-}08$$

$$\text{Noncancer Ingestion Intake} = 4.29\text{E-}07$$

$$\text{Noncancer Dermal Intake} = 5.66\text{E-}07$$

Cancer risk from ingestion = Soil concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor

Cancer risk from dermal contact = Soil concentration x Cancer Dermal Intake x Absorption Factor x Dermal Cancer Slope Factor

Hazard Index from ingestion = Soil concentration x Noncancer Ingestion Intake / Oral Reference Dose

Hazard Index from dermal contact = Soil concentration x Noncancer Dermal Intake x Absorption Factor / Dermal Reference Dose

Unit Intake Calculations

$$\text{Ingestion Intake} = (IR-GW \times EF \times ED)/(BW \times AT)$$

$$\text{Dermal Intake} = (SA \times EV \times EF \times ED)/(BW \times AT)$$

$$\text{Cancer Ingestion Intake} = 8.06E-07$$

$$\text{Cancer Dermal Intake} = 8.06E+00$$

$$\text{Noncancer Ingestion Intake} = 2.82E-05$$

$$\text{Noncancer Dermal Intake} = 2.82E+02$$

Cancer risk from ingestion = Groundwater concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor

Cancer risk from dermal contact = Groundwater concentration x Cancer Dermal Intake x DAevent x Dermal Cancer Slope Factor

Hazard Index from ingestion = Groundwater concentration x Noncancer Ingestion Intake / Oral Reference Dose

Hazard Index from dermal contact = Groundwater concentration x Noncancer Dermal Intake x DAevent / Dermal Reference Dose

Unit Intake Calculations

Incidental Ingestion Intake = $(IR-S \times CF3 \times FI \times EF \times ED) / (BW \times AT)$

Dermal Intake = $(CF3 \times SA \times SSAF \times EF \times ED) / (BW \times AT)$

Non-Mutagenic Chemicals

Cancer Ingestion Intake (Age 6 - 30) = 4.70E-07 Cancer Dermal Intake (Age 6 - 30) = 1.87E-06

Mutagenic Chemicals

Cancer Ingestion Intake (Age 6 - 16) = 1.96E-07 Cancer Dermal Intake (Age 6 - 16) = 7.81E-07
Cancer Ingestion Intake (Age 16 - 30) = 2.74E-07 Cancer Dermal Intake (Age 16 - 30) = 1.09E-06

Noncarcinogenic Chemicals

Noncancer Ingestion Intake = 1.37E-06 Noncancer Dermal Intake = 5.47E-06

Cancer risk from ingestion = Soil concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor

Cancer risk from dermal contact = Soil concentration x Cancer Dermal Intake x Absorption Factor x Dermal Cancer Slope Factor

Hazard Index from Ingestion = Soil concentration x Noncancer Ingestion Intake / Oral Reference Dose

Hazard Index from dermal contact = Soil concentration x Noncancer Dermal Intake x Absorption Factor / Dermal Reference Dose

Notes:

- Professional judgement.
- USEPA Region 4: Supplemental Guidance To RAGS: Region 4 Bulletins, Human Health Risk Assessment Bulletins, May 2000; see text.
- Adults were evaluated as one age group (7 - 30 years) for non-mutagenic chemicals. For chemicals that act via the mutagenic mode of action, residential adults were evaluated as two age groups, 7 - 16 years and 16 - 30 years in accordance with USEPA's Supplemental Guidance of Assessing Susceptibility from Early-Life Exposure to Carcinogens (USEPA, 2005).
- Assumes a total 30 year exposure, 11 years for an adolescent (6 to 16 years old) and the remaining 19 years for an adult.

USEPA, 2002a: Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites. OSWER 9285.6-10, December.
USEPA, 2002b: Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24.
USEPA, 2004: Risk Assessment Guidance for Superfund (Part E, Supplemental Guidance for Dermal Risk Assessment) Final. EPA/540/R/99/005.

Unit Intake Calculations

Ingestion Intake = (CR x CF x ET x EF x ED)/(BW x AT)
Dermal Intake = (SA x EV x EF x ED)/(BW x AT)

Cancer Ingestion Intake = 5.87E-10 Cancer Dermal Intake = 3.35E-01
Noncancer Ingestion Intake = 5.87E-09 Noncancer Dermal Intake = 3.35E+00

Cancer risk from ingestion = Surface Water concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor
Cancer risk from dermal contact = Surface Water concentration x Cancer Dermal Intake x Dermal Cancer Slope Factor
Hazard Index from ingestion = Surface Water concentration x Noncancer Ingestion Intake / Oral Reference Dose
Hazard Index from dermal contact = Surface Water concentration x Noncancer Dermal Intake x Dermal Reference Dose

USEPA, 2004: Risk Assessment Guidance for Superfund (Part E, Supplemental Guidance for Dermal Risk Assessment) Final. EPA/540/R/99/005.

Unit Intake Calculations

Incidental Ingestion Intake = (IR-S x CF3 x FI x EF x ED)/(BW x AT)

Dermal Intake = (CF3 x SA x SSAFE x EF x ED)/(BW x AT)

Non-Mutagenic Chemicals

Cancer Ingestion Intake (Age 6 - 30) = 4.03E-08 Cancer Dermal Intake (Age 6 - 30) = 1.61E-07

Mutagenic Chemicals

Cancer Ingestion Intake (Age 6 - 16) = 1.68E-08 Cancer Dermal Intake (Age 6 - 16) = 6.69E-08

Cancer Ingestion Intake Age 16 - 30) = 2.35E-08 Cancer Dermal Intake Age 16 - 30) = 9.37E-08

Noncarcinogenic Chemicals

Noncancer Ingestion Intake = 1.17E-07 Noncancer Dermal Intake = 4.68E-07

Cancer risk from ingestion = Sediment concentration x Cancer Ingestion Intake x Oral Cancer Slope Factor

Cancer risk from dermal contact = Sediment concentration x Cancer Dermal Intake x Absorption Factor x Dermal Cancer Slope Factor

Hazard Index from ingestion = Sediment concentration x Noncancer Ingestion Intake / Oral Reference Dose

Hazard Index from dermal contact = Sediment concentration x Noncancer Dermal Intake x Absorption Factor / Dermal Reference Dose

Thallium	Groundwater	NA	NA	1.0E-03	cm/hr	NA						

Notes:

All values from EPA's Risk Assessment Guidance for Superfund Volume 1: Human Health Evaluation Manual (Part E, Supplemental Guidance for Dermal Risk Assessment) Final, July 2004.

1 - T(event) for exposures to groundwater by construction worker is 4 hours for RME and 2 hours for CTE and residents is 0.33 hour for RME and 0.25 hour for CTE.

All receptors are assumed to be exposed to surface water 1 hour a day for RME and CTE.

2 - RAGS Part E recommends not attempting to quantify risk because contaminants are outside the effective predictive domain of the model.

FA = Fraction Absorbed Water

T* = Time to Reach Steady-State

Kp = Dermal Permeability Coefficient of Compound in Water

B = Dimensionless Ratio of the Permeability Coefficient of a Compound Through the Stratum Corneum Relative to its Permeability Coefficient Across the Viable Epidermis

T(event) = Event Duration

NA = Not applicable.

Tau = Lag Time

Notes:

1 - Inhalation CSF = Unit Risk * 70 kg / 20m³/day.

2 - The carcinogenic PAHs are considered to act via the mutagenic mode of action. These chemicals are evaluated in accordance with USEPA's Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens (2005).

3 - Values are for chlordane.

4 - Values are for alpha-BHC.

Definitions:

IRIS = Integrated Risk Information System.

NA = Not Available.

ORNL = Oak Ridge National Laboratory, Regional Screening Levels for Chemical Contaminants at Superfund Sites, April 2009.

USEPA(2) = USEPA, PCBs: Cancer Dose-Response Assessment and Applications to Environmental Mixtures, September 1996, EPA/600/P-96/001F.

CALCULATION WORKSHEET

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: CALCULATION OF INTAKE/RISK FROM INCIDENTAL INGESTION OF SOIL CONSTRUCTION WORKERS		
BASED ON: USEPA, DECEMBER 1989		
BY: L. CIOFANI	CHECKED BY: <i>L. Dansen</i>	DATE: 06/19/09

PURPOSE: To estimate intake, carcinogenic and noncarcinogenic risks from incidental ingestion of surface soil at the Northwest Undeveloped Area.

EQUATION:
$$IEX = \frac{CS \times IR \times EF \times ED \times FI \times CF}{BW \times AT}$$

Where:

- IEX = estimated exposure intake (mg/kg/day)
- Cs = exposure point concentration in soil (mg/kg)
- IR = incidental ingestion rate (mg/day)
- EF = exposure frequency (days/year)
- ED = exposure duration (years)
- FI = fraction ingested from contaminated source (unitless)
- CF = conversion factor (1.0E-6 kg/mg)
- BW = body weight (kg)
- AT = averaging time (days)
- CSFo = oral carcinogenic slope factor ((mg/kg/day)⁻¹)
- RfDo = oral noncarcinogenic reference dose (mg/kg/day)

RISKS:

- ILCR (Carcinogens) = Intake (mg/kg/day) x CSFo (mg/kg/day)⁻¹
- HQ (Noncarcinogens) = Intake (mg/kg/day) / RfDo (mg/kg/day)

ASSUMPTIONS:

- Cs = 2.2 mg/kg Chemical: Arsenic
- IR = 330 mg/day
- EF = 250 days/year
- ED = 1 years
- FI = 1
- CF = 1.0E-06 kg/mg
- BW = 70 kg
- ATc = 25550 days
- ATnc = 365 days
- CSFo = 1.5E+00 (mg/kg/day)⁻¹
- RfDo = 3.0E-04 (mg/kg/day)

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM INCIDENTAL INGESTION OF SOIL CONSTRUCTION WORKERS			
BASED ON: USEPA, DECEMBER 1989			
BY: L. CIOFANI		CHECKED BY: <i>A. Sanson</i>	DATE: 06/19/09

EXAMPLE CARCINOGENIC CALCULATION

$$IEXc = \frac{2.2 \text{ mg/kg} \times 330 \text{ mg/day} \times 250 \text{ days/year} \times 1 \text{ years} \times 1 \times 1.0E-06 \text{ kg/mg}}{70 \text{ kg} \times 25550 \text{ days}}$$

$$IEXc = 1.01E-07 \text{ mg/kg/day}$$

$$ILCR = 1.01E-07 \text{ mg/kg/day} \times 1.50E+00 \text{ (mg/kg/day)}^{-1} = \text{Incremental Lifetime Cancer Risk}$$

$$ILCR = 1.5E-07$$

EXAMPLE NONCARCINOGENIC CALCULATION

$$IEXnc = \frac{2.2 \text{ mg/kg} \times 330 \text{ mg/day} \times 250 \text{ days/year} \times 1 \text{ years} \times 1 \times 1.0E-06 \text{ kg/mg}}{70 \text{ kg} \times 365 \text{ days}}$$

$$IEXnc = 7.10E-06 \text{ mg/kg/day}$$

$$HQ = 7.10E-06 \text{ mg/kg/day} / 3.00E-04 \text{ (mg/kg/day)} = \text{Hazard Quotient}$$

$$HQ = 2.4E-02$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH SOIL CONSTRUCTION WORKERS		
BASED ON: USEPA, JULY 2004		
BY: L. CIOFANI	CHECKED BY: <i>L. Ciofani</i>	DATE: 06/19/09

PURPOSE: To estimate intake, carcinogenic and noncarcinogenic risks from dermal contact with surface soil at the Northwest Undeveloped Area.

EQUATION:
$$DEX = \frac{Cs \times CF \times SA \times AF \times ABS \times EF \times ED}{BW \times AT}$$

Where:

- DEX = estimated exposure intake (mg/kg/day)
- Cs = exposure point concentration in soil (mg/kg)
- CF = conversion factor (1.0E-6 kg/mg)
- SA = skin surface available for contact (cm²/day)
- ABS = absorption factor (unitless)
- AF = adherence factor (mg/cm²)
- EF = exposure frequency (days/year)
- ED = exposure duration (years)
- BW = body weight (kg)
- AT = averaging time (days)
- CSFd = dermal carcinogenic slope factor ((mg/kg/day)⁻¹)
- RfDd = dermal noncarcinogenic reference dose (mg/kg/day)

RISKS:

- ILCR (Carcinogens) = Intake (mg/kg/day) x CSFd (mg/kg/day)⁻¹
- HQ (Noncarcinogens) = Intake (mg/kg/day) / RfDd (mg/kg/day)

ASSUMPTIONS:

- Cs = 2.2 mg/kg Chemical: Arsenic
- CF = 1.0E-06 kg/mg
- SA = 3300 cm²/day
- AF = 0.3 mg/cm²
- ABS = 0.03
- EF = 250 days/year
- ED = 1 years
- BW = 70 kg
- ATc = 25550 days
- ATnc = 365 days
- CSFd = 1.5E+00 (mg/kg/day)⁻¹
- RfDd = 3.0E-04 (mg/kg/day)

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH SOIL CONSTRUCTION WORKERS		
BASED ON: USEPA, JULY 2004		
BY: L. CIOFANI	CHECKED BY: <i>L. Danner</i>	DATE: 06/19/09

EXAMPLE CARCINOGENIC CALCULATION

$$\text{DEXc} = \frac{2.2 \text{ mg/kg} \times 1.0\text{E-}06 \text{ kg/mg} \times 3300 \text{ cm}^2/\text{day} \times 0.3 \text{ mg/cm}^2 \times 0.03 \times 250 \text{ days/year} \times 1 \text{ years}}{70 \text{ kg} \times 25550 \text{ days}}$$

$$\text{DEXc} = 9.13\text{E-}09 \text{ mg/kg/day}$$

$$\text{ILCR} = 9.13\text{E-}09 \text{ mg/kg/day} \times 1.50\text{E+}00 \text{ (mg/kg/day)}^{-1} = \text{Incremental Lifetime Cancer Risk}$$

$$\text{ILCR} = 1.4\text{E-}08$$

EXAMPLE NONCARCINOGENIC CALCULATION

$$\text{DEXnc} = \frac{2.2 \text{ mg/kg} \times 1.0\text{E-}06 \text{ kg/mg} \times 3300 \text{ cm}^2/\text{day} \times 0.3 \text{ mg/cm}^2 \times 0.03 \times 250 \text{ days/year} \times 1 \text{ years}}{70 \text{ kg} \times 365 \text{ days}}$$

$$\text{DEXnc} = 6.39\text{E-}07 \text{ mg/kg/day}$$

$$\text{HQ} = 6.39\text{E-}07 \text{ mg/kg/day} / 3.00\text{E-}04 \text{ (mg/kg/day)} = \text{Hazard Quotient}$$

$$\text{HQ} = 2.1\text{E-}03$$

CALCULATION WORKSHEET

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH GROUNDWATER CONSTRUCTION WORKERS			
BASED ON: USEPA, DECEMBER 1989, JULY 2004			
BY: L. CIOFANI		CHECKED BY: <i>G. Danson</i>	DATE: 06/19/09

PURPOSE: To estimate intake, carcinogenic and noncarcinogenic risks from dermal contact with groundwater from the undeveloped area.

EQUATION:
$$DAD = \frac{DA_{event} \times EV \times ED \times EF \times A}{BW \times AT}$$

Where:

- DAD = dermally absorbed dose (mg/kg/day)
- DA_{event} = absorbed dose per event (mg/cm²/event)
- EV = event frequency (events/day)
- EF = exposure frequency (days/year)
- ED = exposure duration (years)
- A = skin surface available for contact (cm²)
- BW = body weight (kg)
- AT = averaging time (days)
- CSF_d = dermal carcinogenic slope factor ((mg/kg/day)⁻¹)
- RfD_d = dermal noncarcinogenic reference dose (mg/kg/day)

RISKS:

- ILCR (Carcinogens) = DAD (mg/kg/day) x CSF_d (mg/kg/day)⁻¹
- HQ (Noncarcinogens) = DAD (mg/kg/day) / RfD_d (mg/kg/day)

EQUATIONS for DA_{event}:

For Inorganics:

DA_{event} = K_p x C_w x CF x t_{event}

For Organics:

If t_{event} ≤ t', then:
$$DA_{event} = 2 \times FA \times K_p \times C_w \times CF \times \sqrt{\frac{6 \times \tau \times t_{event}}{\pi}}$$

If t_{event} > t', then:
$$DA_{event} = FA \times K_p \times C_w \times CF \times \left[\frac{t_{event}}{1+B} + 2 \times \tau \times \left(\frac{1+3B+3B^2}{(1+B)^2} \right) \right]$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH GROUNDWATER CONSTRUCTION WORKERS			
BASED ON: USEPA, DECEMBER 1989, JULY 2004			
BY: L. CIOFANI		CHECKED BY: <i>L. Danger</i>	DATE: 06/19/09

Where:

- Kp = permeability coefficient from water (cm/hr)
- Cgw = concentration of chemical in groundwater (mg/L)
- tevent = duration of event (hr/event)
- CF = conversion factor (0.001 L/cm³)
- t* = time it takes to reach steady-state (hr/event)
- τ = lag time (hr/event)
- B = Bunge Model Constant (dimensionless)

EXAMPLE CALCULATION OF DAevent

ASSUMPTIONS:

- Cgw = 0.00054 mg/L Chemical: Tetrachloroethene
- Kp = 3.34E-02 cm/hr
- FA = 1 unitless
- tevent = 4 hr/event
- CF = 0.001 L/cm³
- t* = 2.18 hr/event
- τ = 0.91 hr/event
- B = 0.166

tevent > t*, therefore,

$$DA_{event} = (0.0334 \text{ cm/hr}) (0.00054 \text{ mg/L}) (0.001 \text{ L/cm}^3) \times \left[\frac{4 \text{ hr/event}}{1 + 0.166} + 2 \times 0.91 \text{ hr/event} \times \frac{(1 + 3 \times 0.166 + 3 \times 0.166 \times 0.166)}{(1 + 0.166)^2} \right]$$

$$DA_{event} = 1.00E-07 \text{ mg/cm}^2/\text{event}$$

RISK CALCULATIONS

ASSUMPTIONS:

- A = 3300 cm²/day
- EV = 1 event/day
- ED = 1 years
- EF = 30 days/year
- BW = 70 kg
- ATc = 25550 days
- ATnc = 365 days
- CSFd = 5.4E-01 (mg/kg/day)⁻¹
- RfDd = 1.0E-02 (mg/kg/day)

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH GROUNDWATER CONSTRUCTION WORKERS			
BASED ON: USEPA, DECEMBER 1989, JULY 2004			
BY: L. CIOFANI		CHECKED BY: <i>L. Daner</i>	DATE: 06/19/09

EXAMPLE CARCINOGENIC CALCULATION

$$DADc = \frac{1.00E-07 \text{ mg/cm}^2/\text{event} \times 1 \text{ event/day} \times 1 \text{ years} \times 30 \text{ days/year} \times 3300 \text{ cm}^2/\text{day}}{70 \text{ kg} \times 25550 \text{ days}}$$

$$DADc = 5.54E-09 \text{ mg/kg/day}$$

$$DADc = 5.54E-09 \text{ mg/kg/day} \times 5.40E-01 \text{ (mg/kg/day)}^{-1} = \text{Incremental Lifetime Cancer Risk}$$

$$ILCR = 3.0E-09$$

EXAMPLE NONCARCINOGENIC CALCULATION

$$DADnc = \frac{1.00E-07 \text{ mg/cm}^2/\text{event} \times 1 \text{ event/day} \times 1 \text{ years} \times 30 \text{ days/year} \times 3300 \text{ cm}^2/\text{day}}{70 \text{ kg} \times 365 \text{ days}}$$

$$DADnc = 3.88E-07 \text{ mg/kg/day}$$

$$HQ = 3.88E-07 \text{ mg/kg/day} / 1.00E-02 \text{ (mg/kg/day)} = \text{Hazard Quotient}$$

$$HQ = 3.9E-05$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: ESTIMATION OF AMBIENT AIR CONCENTRATIONS IN A TRENCH RESULTING FROM VOLATILE EMISSIONS FROM GROUNDWATER.		
BASED ON: VDEQ, 2004		
BY: L. CIOFANI	CHECKED BY: <i>E. Hansen</i>	DATE: 06/19/09

PURPOSE: To calculate ambient air concentrations resulting from volatilization of tetrachloroethene (PCE) from groundwater in the developed area.

C_{trench} = CGW x VF

Where:

C_{trench} = concentration of contaminant in the trench µg/m³

CGW = concentration of contaminant in groundwater µg/L

VF = volatilization factor L/m³

1. Calculate kiG (gas-phase mass transfer coefficient of component i)

$$kiG = (MW_{H2O}/MW_i)^{0.335} \times (T/298)^{1.005} \times kG, H2O$$

Where:

kiG = gas-phase mass transfer coefficient of component i cm/s

MW_{H2O} = molecular weight of water = 18 g/mol

MW_{PCE} = molecular weight of Tetrachloroethene = 165.83 g/mol

kG, H₂O = gas-phase mass transfer coefficient of water vapor at 25°C cm/s = 0.833 cm/s

T = average system absolute temperature = 298

The value of kG, H₂O is 0.833 cm/s (Superfund Exposure Assessment Manual, U. S. EPA, April 1988)

$$kiG = (18/165.83)^{0.335} \times (298/298)^{1.005} \times 0.833 \text{ cm/s} = 3.96E-01 \text{ cm/s}$$

2. Calculate kiL (liquid-phase mass transfer coefficient of component i)

$$kiL = (MW_{O2}/MW_i)^{0.5} \times (T/298) \times kL, O2$$

Where:

kiL = liquid-phase mass transfer coefficient of component i cm/s

MW_{O2} = molecular weight of O₂ = 32 g/mol

MW_{PCE} = molecular weight of Tetrachloroethene = 165.83 g/mol

T = average system absolute temperature = 298

kL, O₂ = liquid-phase mass transfer coefficient of oxygen at 25°C cm/s = 0.002 cm/s

$$kiL = (32/165.83)^{0.5} \times (298/298) \times 0.002 \text{ cm/s} = 8.79E-04 \text{ cm/s}$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: ESTIMATION OF AMBIENT AIR CONCENTRATIONS IN A TRENCH RESULTING FROM VOLATILE EMISSIONS FROM GROUNDWATER.		
BASED ON: VDEQ, 2004		
BY: L. CIOFANI	CHECKED BY: <i>J. Danz</i>	DATE: 06/19/09

3. Calculate Ki (overall mass transfer coefficient of contaminant)

$$K_i = 1 / \{ (1/k_{iL}) + [(RT) / (H_i \times k_{iG})] \}$$

Where:

K_i = overall mass transfer coefficient of contaminant cm/s
 k_{iL} = liquid-phase mass transfer coefficient of i cm/s = 8.79E-04
 R = ideal gas constant atm-m³/mole-°K = 8.20E-05
 T = average system absolute temperature = 298
 H_i = Henry's Law constant of PCE (atm-m³/mol) = 1.84E-02
 k_{iG} = gas-phase mass transfer coefficient of i cm/s = 3.96E-01

$$K_i = 1 / \{ (1/8.79E-4) + [(298 \times 8.2E-5) / (1.8E-2 \times 0.396)] \} = 8.76E-04 \text{ cm/s}$$

4. Calculation of VF (Volatilization Factor)

$$VF = (K_i \times A \times F \times 10^{-3} \times 10^4 \times 3,600) / (ACH \times V)$$

Where:

VF = volatilization factor (L/m³)
 K_i = overall mass transfer coefficient of contaminant = 8.76E-04 cm/s
 A = area of the trench = 8.18 m²
 F = fraction of floor through which contaminant can enter (unitless) = 1
 ACH = air changes per hour = 360 h⁻¹
 V = volume of trench = 24.92 m³
 10^{-3} = conversion factor L/cm³ 0.001
 10^4 = conversion factor cm²/m² 10000
 $3,600$ = conversion factor seconds/hr 3600

$$VF = (8.76E-04 \times 8.18 \times 1 \times 10^{-3} \times 10^4 \times 3,600) / (360 \times 24.92) = 2.87E-02 \text{ L/m}^3$$

5. Calculation of C_{trench} (concentration of contaminant in the trench)

$$C_{trench} = C_{GW} \times VF$$

Where:

C_{trench} = concentration of contaminant in the trench (µg/m³)
 C_{GW} = concentration of Tetrachloroethene in groundwater = 0.54 µg/L
 VF = volatilization factor = 2.87E-02 L/m³

$$C_{trench} = 0.54 \text{ µg/L} \times 2.87E-02 \text{ L/m}^3 = 1.55E-02 \text{ µg/m}^3$$

$$1.55E-05 \text{ mg/m}^3$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700

EXAMPLE CARCINOGENIC CALCULATION

$$IEX_c = \frac{3.4 \text{ ug/L} \times 1.0E-03 \text{ mg/ug} \times 0.01 \text{ L/hr} \times 1 \text{ hours/day} \times 30 \text{ days/year} \times 19 \text{ years}}{70 \text{ kg} \times 25550 \text{ days}}$$

$$IEX_c = 1.08E-08 \text{ mg/kg/day}$$

$$ILCR = 1.08E-08 \text{ mg/kg/day} \times 1.50E+00 \text{ (mg/kg/day)}^{-1} = \text{Incremental Lifetime Cancer Risk}$$

$$ILCR = 1.6E-08$$

EXAMPLE NONCARCINOGENIC CALCULATION

$$IEX_{nc} = \frac{3.4 \text{ ug/L} \times 1.0E-03 \text{ mg/ug} \times 0.01 \text{ L/hr} \times 1 \text{ hours/day} \times 30 \text{ days/year} \times 19 \text{ years}}{70 \text{ kg} \times 6935 \text{ days}}$$

$$IEX_{nc} = 3.99E-08 \text{ mg/kg/day}$$

$$HQ = \frac{3.99E-08 \text{ mg/kg/day}}{3.00E-04 \text{ (mg/kg/day)}} = \text{Hazard Quotient}$$

$$HQ = 1.3E-04$$

CALCULATION WORKSHEET

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH SURFACE WATER ADULT RESIDENTS		
BASED ON: U.S. EPA, DECEMBER 1989, JULY 2004		
BY: L. CIOFANI	CHECKED BY: <i>L. Ganser</i>	DATE: 06/22/09

PURPOSE: To estimate intake, carcinogenic and noncarcinogenic risks from dermal contact with surface water.

EQUATION:
$$DAD = \frac{DA_{event} \times EV \times ED \times EF \times A}{BW \times AT}$$

Where:

- DAD = dermally absorbed dose (mg/kg/day)
- DA_{event} = absorbed dose per event (mg/cm²/event)
- EV = event frequency (events/day)
- EF = exposure frequency (days/year)
- ED = exposure duration (years)
- A = skin surface available for contact (cm²)
- BW = body weight (kg)
- AT = averaging time (days)
- CSF_o = oral carcinogenic slope factor ((mg/kg/day)⁻¹)
- RfD_o = oral noncarcinogenic reference dose (mg/kg/day)

RISKS:

- ILCR (Carcinogens) = DAD (mg/kg/day) x CSF_d (mg/kg/day)⁻¹
- HQ (Noncarcinogens) = DAD (mg/kg/day) / RfD_d (mg/kg/day)

EQUATIONS for DA_{event}:

For Inorganics:

DA_{event} = K_p x C_w x CF x t_{event}

For Organics:

If t_{event} ≤ t', then:
$$DA_{event} = 2 \times FA \times K_p \times C_w \times CF \times \sqrt{\frac{6 \times \tau \times t_{event}}{\pi}}$$

If t_{event} > t', then:
$$DA_{event} = FA \times K_p \times C_w \times CF \times \left[\frac{t_{event}}{1+B} + 2 \times \tau \times \left(\frac{1+3B+3B^2}{(1+B)^2} \right) \right]$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH SURFACE WATER ADULT RESIDENTS			
BASED ON: U.S. EPA, DECEMBER 1989, JULY 2004			
BY: L. CIOFANI		CHECKED BY: <i>L. Danson</i>	DATE: 06/22/09

Where:

- Kp = permeability coefficient from water (cm/hr)
- Cgw = concentration of chemical in surface water (mg/L)
- tevent = duration of event (hr/event)
- CF = conversion factor (0.001 L/cm³)
- t* = time it takes to reach steady-state (hr/event)
- τ = lag time (hr/event)
- B = Bunge Model Constant (dimensionless)

EXAMPLE CALCULATION OF DAevent

ASSUMPTIONS:

- Cgw = 3.4 ug/L Chemical: Arsenic
- Kp = 1.00E-03 cm/hr
- tevent = 1 hr/event
- CF = 0.001 L/cm³

DAevent = 0.001 cm/hr x 3.4 ug/L x 0.001 L/cm³ x 1 hr/event x 0.001 mg/ug

DAevent = 3.40E-09 mg/cm²/event

RISK CALCULATIONS

ASSUMPTIONS:

- A = 5700 cm²/day
- EV = 1 event/day
- ED = 24 years
- EF = 30 days/year
- BW = 70 kg
- ATc = 25550 days
- ATnc = 8760 days
- CSFd = 1.5E+00 (mg/kg/day)⁻¹
- RfDd = 3.0E-04 (mg/kg/day)

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM DERMAL CONTACT WITH SURFACE WATER ADULT RESIDENTS			
BASED ON: U.S. EPA, DECEMBER 1989, JULY 2004			
BY: L. CIOFANI		CHECKED BY: <i>J. Danner</i>	DATE: 06/22/09

EXAMPLE CARCINOGENIC CALCULATION

$$DADc = \frac{3.40E-09 \text{ mg/cm}^2/\text{event} \times 1 \text{ event/day} \times 24 \text{ years} \times 30 \text{ days/year} \times 5700 \text{ cm}^2/\text{day}}{70 \text{ kg} \times 25550 \text{ days}}$$

$$DADc = 7.80E-09 \text{ mg/kg/day}$$

$$DADc = 7.80E-09 \text{ mg/kg/day} \times 1.50E+00 \text{ (mg/kg/day)}^{-1} = \text{Incremental Lifetime Cancer Risk}$$

$$ILCR = 1.2E-08$$

EXAMPLE NONCARCINOGENIC CALCULATION

$$DADnc = \frac{3.40E-09 \text{ mg/cm}^2/\text{event} \times 1 \text{ event/day} \times 24 \text{ years} \times 30 \text{ days/year} \times 5700 \text{ cm}^2/\text{day}}{70 \text{ kg} \times 8760 \text{ days}}$$

$$DADnc = 2.28E-08 \text{ mg/kg/day}$$

$$HQ = 2.28E-08 \text{ mg/kg/day} / 3.00E-04 \text{ (mg/kg/day)} = \text{Hazard Quotient}$$

$$HQ = 7.6E-05$$

CLIENT: NCBC GULFPORT		JOB NUMBER: 00700	
SUBJECT: CALCULATION OF INTAKE/RISK FROM INCIDENTAL INGESTION OF SEDIMENT ADULT TRESPASSER			
BASED ON: USEPA, DECEMBER 1989			
BY: L. CIOFANI		CHECKED BY: <i>L. Danson</i>	DATE: 06/19/09

PURPOSE: To estimate intake, carcinogenic and noncarcinogenic risks from incidental ingestion of sediment.

EQUATION:
$$IEX = \frac{CS \times IR \times EF \times ED \times FI \times CF}{BW \times AT}$$

Where:

- IEX = estimated exposure intake (mg/kg/day)

APPENDIX F

**SCREENING LEVEL ECOLOGICAL RISK ASSESSMENT
FOOD – CHAIN MODELING**

APPENDIX F
FOOD CHAIN MODELING AT SITE 1

The objective of the food chain modeling was to evaluate potential risks to representative receptors from screening-level COPCs in Site 1 sediment and surface water that are known to bioaccumulate or biomagnify. USEPA Region 4 considers chemicals in this category to consist of those so designated in *Bioaccumulation Testing and Interpretation for the Purpose of Sediment Quality Assessment, Status and Needs* (USEPA, 2000), with the exception of PAHs. USEPA Region 4 does not consider PAHs to bioaccumulate unless they are present at percent levels in soil or sediment. Screening-level COPCs in Site 1 sediment and surface water are shown in Tables 7-2 and 7-3 of the ecological risk assessment; those that are known to bioaccumulate or biomagnify consist of aldrin, alpha-BHC, delta-BHC, alpha-chlordane, gamma-chlordane, heptachlor epoxide, arsenic, lead, and zinc. The remaining COPCs are not known to bioaccumulate or biomagnify and were not included in the food chain model.

Risk via the food chain was evaluated using two scenarios. The first scenario used maximum detected COPC concentrations in sediment and surface water and conservative assumptions for body weight, food consumption, and sediment ingestion. The second scenario used average COPC concentrations, and less conservative values for body weight, food consumption, and sediment ingestion, except where noted. For brevity, the first scenario will hereafter be referred to as the conservative scenario, and the second scenario will be referred to as the average scenario. For each scenario, ingested doses for birds and mammals were calculated using the equation shown below.

$$PD = [(C_{\text{food}} \times I_f) + (C_{\text{water}} \times I_w) + (C_{\text{sed}} \times I_{\text{sed}})] \times AUF / BW \quad (\text{Equation 1})$$

where: PD = predicted dose from the ingestion of food and water and the incidental ingestion of sediment (mg/kg/day)

C_{food} = contaminant concentration in food (mg/kg)

I_f = food ingestion rate (kg/day)

C_{water} = contaminant concentration in water (mg/L)

I_w = water ingestion rate (L/day)

C_{sed} = contaminant concentration in sediment (mg/kg)

I_{sed} = sediment ingestion rate (kg/day)

AUF = area use factor (portion of home range that overlaps Site 1)

BW = weight of receptor (kg)

REPRESENTATIVE RECEPTORS AND EXPOSURE FACTORS

The mink (*Mustela vison*) was used to represent mammals that prey upon fish and invertebrates in water bodies along the edge of Site 1. Birds that prey on fish and invertebrates were represented by the green heron (*Butorides virescens*). These two species have a high probability of exposure to surface water and sediment contaminants based on their diet and habitat preferences. The selected species are assumed to be representative of other species within the same trophic group or guild and represent the groups of organisms specified in the assessment endpoints. Information regarding these representative receptors is presented below and in Table F-1. Values for body weight, food consumption, and water consumption were taken preferentially from the *Wildlife Exposure Factors Handbook* (USEPA, 1993). Table E2 presents the values for body weight, food and water consumption, and incidental sediment ingestion that were used in the food chain model (Equation 1), and was derived from Table E1.

Mink

The mink is the most abundant and widespread carnivorous mammal in North America. Mink are found in freshwater and brackish coastal marshes, wetlands, swamps, and along the edges of rivers, streams, lakes, lakes, and ditches (USEPA, 1993). They are never found far from water (Lowery, 1974). Mink tend to use brushy or wooded cover adjacent to water where prey is abundant. Mink den in cavities in tree roots, brush piles, rock piles, logjams, or bank burrows of other animals, particularly muskrats. Mink are largely nocturnal but may move or feed during crepuscular (twilight) periods or during cloudy daylight conditions (USEPA, 1993).

Mink are carnivorous opportunistic predators, taking whatever prey is abundant. They feed on fish, crustaceans, and amphibians in aquatic habitats. Mammals are the most important prey in nearby terrestrial habitats where mink prey especially on mice, rats, and rabbits, and also birds, reptiles, and insects (Lowery, 1974; USEPA, 1993).

Mean body weight values for adult wild mink (non-farm raised) were 1.040 kg (male, summer), 1.233 kg (male, fall), 0.550 kg (female, summer), and 0.586 kg (female, fall) in studies summarized in USEPA's *Wildlife Exposure Factors Handbook* (1993). Because female mink are especially sensitive to COPCs such as Aroclor, mink body weight and food ingestion values in the Site 1 ecological risk assessment were based on female data. Therefore, the BW term in Equation 1 was 0.550 kg in the conservative scenario and 0.568 kg (average female summer and fall) in the average scenario (Tables F-1 and F-2).

Food ingestion rates for mink ranged from 0.12 to 0.22 g/g body weight/day (USEPA, 1993). Food ingestion in the conservative scenario (0.0678 kg/day; Table F-2) was derived by multiplying the maximum food ingestion rate (0.22 g/g body weight/day) by the maximum body weight (1.233 kg), then multiplying by 0.25 to convert the ingestion rate from a wet-weight value to a dry-weight value, based on a 75-percent moisture content in fish (Sample, et al., 1997). Food ingestion in the average scenario (0.0227 kg/day; Table F-2) was derived by multiplying the female food ingestion rate (0.16 g/g body weight/day) by the average female body weight (0.568 kg; Table F-2), then multiplying by 0.25 to convert the ingestion rate from a wet-weight value to a dry-weight value.

Water ingestion rates for mink ranged from 0.028 to 0.11 g/g body weight/day (USEPA, 1993). Water ingestion in the conservative scenario (0.1356 L/day; Table F-2) was derived by multiplying the maximum water ingestion rate (0.11 g/g body weight/day) by the maximum body weight (1.233 kg). Water ingestion rate in the less conservative scenario (0.0392 L/day; Table F-2) was derived by multiplying the average female water ingestion rate (0.069 g/g body weight/day) by the average female body weight (0.568 kg).

The two incidental sediment ingestion rates in Table F-2 (0.0064 kg/day and 0.0021 kg/day) were calculated by multiplying the two food ingestion rates (0.0678 kg/day and 0.0227 kg/day) by incidentally ingested sediment (9.4 percent of diet). The 9.4 percent value is based on the incidental soil/sediment ingestion rate of the raccoon (Beyer, et al., 1994), which also forages on aquatic organisms, because sediment ingestion data were not available for the mink.

Green Heron

The green heron is a common bird in wetland thickets throughout the eastern United States. It is typically a bird of swampy thickets where it forages in both fresh and salt water, especially along forested margins of ponds, lakes, rivers, streams, marshes, and swamps. It prefers thick vegetation but will feed in the open when food is available. Small fish are the primary prey, but green herons also consume insects and a variety of aquatic invertebrates. Breeding populations in Mississippi are non-migratory (Davis and Kushlan, 1994). The green heron would undoubtedly forage in water bodies near Site 1, and its small size relative to other wading birds makes it a good representative of other bird species that prey on aquatic and benthic organisms (a low body weight is usually associated with high food intake per unit body weight).

Data for the green heron were not included in USEPA's *Wildlife Exposure Factors Handbook* (USEPA, 1993), so data were obtained elsewhere. The mean adult body weight of 34 green herons in Florida was 212 g (Dunning, 1993). Minimum and maximum body weights were not

provided, but the standard deviation was 5.92 g (Dunning, 1993). A value of 0.200 kg was used as the BW term in Equation 1 for the conservative scenario (Table F-2). This value is the mean minus two standard deviations from Dunning's data. The BW term in Equation 1 for the average scenario was the mean (0.212 kg) from Dunning's data.

Food ingestion rates for the green heron were not available. Nagy (2001) provided allometric equations for several orders of birds but not for Ciconiiformes (herons). Dry weight food ingestion in the conservative scenario (0.031 kg/day; Table F-2) was derived using the Nagy (2001) equation for "marine birds" based on a 0.224 kg bird. The 0.224 kg body weight value is the mean plus 2 standard deviations from Dunning's (1993) green heron data (see paragraph immediately above); this value would approximate the 98th percentile, and thus, represents a conservative approach. Dry weight food ingestion in the average scenario (0.030 kg/day; Table F-2) was derived using the Nagy (2001) equation for marine birds based on a 0.212 kg bird, which is the mean body weight value from Dunning's (1993) green heron data.

Water ingestion rates for the green heron were not available. Water ingestion in the conservative scenario (0.022 L/day; Table F-2) was derived using equation 3-15 from the *Wildlife Exposure Factors Handbook* (USEPA, 1993) for a 0.224 kg bird. Water ingestion in the average scenario (0.021 L/day; Table F-2) was derived using equation 3-15 from the *Wildlife Exposure Factors Handbook* (USEPA, 1993) for a 0.212 kg bird.

Sediment ingestion data for piscivorous birds were not available in the literature. A sediment ingestion rate of 5 percent for piscivorous birds was used in Equation 1. Unlike shorebirds, herons do not probe the sediment. Green herons and other wading birds typically capture prey with a darting stroke, grasping or spearing with the bill (Davis and Kushlan, 1994). Similarly, piscivorous birds such as the belted kingfisher and osprey capture prey primarily from the water column rather than by probing on or near the sediment substrate. Therefore, an assumed value of 5 percent for incidental sediment ingestion is probably a very conservative estimate for the green heron as well as for other piscivorous birds. The two sediment ingestion rates in Table F-2 (0.0016 kg/day and 0.0015 kg/day) were calculated by multiplying the two food ingestion rates (0.031 kg/day and 0.030 kg/day) by 0.05, assuming that incidentally ingested sediment is 5 percent of the diet.

CHEMICAL CONCENTRATIONS IN FOOD ITEMS

Chemical concentrations in food items (the “ C_{food} ” term in Equation 1) were calculated using biota sediment accumulation factors (BSAFs), which are shown in Table F-3.

Chemical concentrations of organic compounds in food items of piscivorous birds and mammals were estimated using the following equation (USEPA, 2004):

$$C_f = \text{BSAF}(C_s/f_{\text{oc}})f_l \quad (\text{Equation 2})$$

where:

- C_f = chemical concentration in food (mg/kg)
- C_s = chemical concentration in sediment (mg/kg)
- BSAF = biota-sediment accumulation factor (ratio of the concentration of a chemical in tissue, normalized to lipid, to the concentration of the chemical in surface sediment, normalized to organic carbon)
- f_{oc} = total organic carbon (TOC) content of sediment expressed as a decimal fraction
- f_l = organism lipid content expressed as a decimal fraction

BSAFs for organic compounds were obtained from *The Incidence and Severity of Sediment Contamination in Surface Waters of the United States, National Sediment Quality Survey: Second Edition* (USEPA, 2004).

The average sediment TOC for use in the fcm is 16472 mg/kg.

The average total organic carbon (TOC) value in Site 1 samples was used to calculate the dose for piscivorous birds and mammals because these receptors obtain their food over a large area. TOC was measured in five sediment samples at Site 1; the average TOC was 16,472 mg/kg, which equates to 1.6472 percent. Thus, a value of 0.016472 was used to represent the f_{oc} term in Equation 2 for organic compounds.

A lipid content of 3 percent (0.03) is often used for assessing human health effects from the consumption of contaminated fish (USEPA, 2004); this value was divided by 0.25 to convert the lipid content from a wet-weight value to a dry-weight value (0.12), based on a 75 percent moisture content in fish (Sample et al., 1997). Thus, 0.12 was used to represent f_l in Equation 2 for organic compounds.

Sediment-to-fish BSAFs are not available for metals, so sediment-to-aquatic invertebrate BSAFs from ORNL (1998) were used to estimate tissue concentrations of metals (arsenic, lead, and zinc) in food items of piscivorous birds and mammals. The BSAFs for metals are not normalized to lipids or TOC, so concentrations of metals in aquatic and benthic invertebrates were estimated by multiplying each COPC's sediment concentration by its associated BSAF.

AREA USE FACTORS

In ecological risk assessments, the home range size of a representative receptor can be used to determine the proportion of time that an individual animal is expected to contact contaminated environmental media. Home range is defined as the geographic area encompassed by an animal's activities (except migration) over a specified time. The home range of each representative receptor was assumed to be equal in size to Site 1 in both the conservative and average initial estimates of ingested doses (i.e., AUF in Equation 1 = 1.0). Due to the size of Site 1, this assumption is probably overly conservative for piscivorous receptors such as the green heron and mink.

ECOLOGICAL EFFECTS EVALUATION

Potential effects to representative piscivorous birds and mammals were evaluated by comparing the modeled ingested doses to threshold oral toxicity reference values (TRVs), which are doses associated with adverse effects on growth, survival, or reproduction. Because TRVs for the specific representative receptors used herein (mink and green heron) were usually not available, toxicity data from laboratory species were extrapolated to the representative receptor species. No-observed-adverse-effects levels (NOAELs) and lowest-observed-adverse-effects levels (LOAELs) were used to provide a range of risks. TRVs used in this ecological risk assessment and their sources are presented in Table F-4 of this appendix.

TRVs were preferentially obtained from USEPA's Eco-SSL documents, in which numerous toxicity studies were evaluated. The TRVs for arsenic, lead, and zinc shown in Table F-4 represent the geometric means of NOAEL and LOAEL data for growth and reproduction from Eco-SSL documents (USEPA, 2005a; b; 2007). TRVs for aldrin, BHC, and chlordane were not included in Eco-SSL documents, so TRVs for these COPCs were obtained from an Oak Ridge National Laboratory report (Sample et al., 1996) that compiled toxicity data from several sources.

The ratio of the modeled dose to the TRV is called the hazard quotient (HQ). An HQ less than 1.0 in the food-chain modeling (in the conservative scenario and using the NOAEL as the TRV)

indicates that risk to the representative piscivorous receptor is unlikely. A food chain HQ of greater than 1.0 indicates that potential risks to ecological receptors is possible, and the chemical is further evaluated.

Calculation spreadsheets for the representative receptors are presented in Tables F-5, F-6, F-7, and F-8 of this appendix.

	Values	Units	Values	Units
<i>Mink</i>				
Body Weight	0.550	kg	0.568	kg
Food Ingestion Rate ⁽²⁾	0.0678	kg/day	0.0227	kg/day
Water Ingestion Rate	0.1356	L/day	0.0392	L/day
Sediment Ingestion Rate ⁽³⁾	0.0064	kg/day	0.0021	kg/day
<i>Green Heron</i>				
Body Weight	0.200	kg	0.212	kg
Food Ingestion Rate ⁽²⁾	0.031	kg/day	0.030	kg/day
Water Ingestion Rate	0.022	L/day	0.021	L/day
Sediment Ingestion Rate ⁽³⁾	0.0016	kg/day	0.0015	kg/day

(1) The derivation of values in this table is presented in Table E-1.

(2) Food ingestion rates are dry-weight values.

(3) Sediment ingestion rates were calculated by multiplying the food ingestion (kg/day) by the proportion of the diet comprised of incidentally ingested sediment (9.4% for mink, 5% for green heron).

**TABLE F-3
BIOTA SEDIMENT ACCUMULATION FACTORS (BSAFs)
SITE 1 DISASTER RECOVERY DISPOSAL AREA
NCBC GULFPORT
GULFPORT, MISSISSIPPI**

Chemicals	BSAF		Source
	Conservative ⁽¹⁾	Average ⁽¹⁾	
Pesticides/ PCBs			
Aldrin	1.80E+00	1.80E+00	USEPA, 2004
alpha-Chlordane	4.77E+00	4.77E+00	USEPA, 2004
gamma-Chlordane	2.22E+00	2.22E+00	USEPA, 2004
Heptachlor Epoxide	1.80E+00	1.80E+00	USEPA, 2004
alpha-BHC	1.80E+00	1.80E+00	USEPA, 2004
delta-BHC	1.80E+00	1.80E+00	USEPA, 2004
Inorganics			
Arsenic	6.90E-01	1.43E-01	ORNL, 1988
Lead	6.07E-01	7.10E-02	ORNL, 1988
Zinc	7.53E+00	1.94E+00	ORNL, 1988

Notes:

1 Conservative and average refer to the exposure scenarios for which the BSAFs were used. For inorganics, conservative value is 90th percentile from ORNL (1998) and average value is median value from ORNL (1988). Only a single BSAF was available for Aroclor-1260 in USEPA (2004); thus, the same BSAF value was used for conservative and average scenarios.

Footnotes:

- (1) See Sample *et al.* (1996) for full citations of primary references cited in the Sample *et al.* (1996) document.
- (2) BHC mixed isomers used as a surrogate for alpha-BHC and delta-BHC. A NOAEL was not derived in the Bleavins et al (1984) mink study for BHC mixed isomers, so the NOAEL used in the Site 1 food chain evaluation was estimated by dividing the LOAEL by 10.
- (3) Chlordane used as a surrogate for alpha-Chlordane and gamma-Chlordane
- (4) Heptachlor used as a surrogate for heptachlor epoxide. A NOAEL was not derived in the Crum et al. (1993) mink study for heptachlor, so the NOAEL used in the Site 1 food chain evaluation was estimated by dividing the LOAEL by 10.
- (5) Bird and mammal TRVs from USEPA' s Eco-SSL documents represent the geometric means of numerous studies of various durations and species.

EXECUTIVE SUMMARY

This sampling and analysis report summarizes the results of a field verification action undertaken at Site 1 - Training Area, and Site 5 - Heavy Equipment Training Area of Construction Battalion Center (CBC), Gulfport, Mississippi. The main purpose of field verification action was to determine if dioxin is present in subsurface soils.

Soil boring and sampling was performed at Sites 1 and 5 from 04 December 1996 to 16 December 1996. Soil sampling was performed using a Geoprobe™ sampling system mounted on a four wheel drive all terrain vehicle. Soil samples were analyzed for volatile organics, semi-volatile organics, pesticides, herbicides, metals, dioxins and furans. Analytical results indicate that the only target analyte present above the established screening levels is arsenic. The main contaminant of concern at the sites, 2,3,7,8 - Tetrachlorodibenzo-p-dioxin (TCDD), was not detected in the samples collected. Therefore, it is recommended that the work proceed at Sites 1 and 5 with test trenching, which is the next project activity in the *Work Plan* [MK 1996].

1.0 INTRODUCTION

1.1 BACKGROUND AND OBJECTIVES

This sampling and analysis report summarizes the results of a field verification action undertaken at Site 1 - Training Area, and Site 5 - Heavy Equipment Training Area of Construction Battalion Center (CBC), Gulfport, Mississippi. The sampling and analysis report was prepared by Morrison Knudsen Corporation (MK) for Southern Division Naval Facilities Engineering Command (SOUTHNAVFACENGCOM), pursuant to the scope of work defined in Delivery Order #0002, Statement of Work #09, under Contract #N62467-93-D-1106.

The purpose of field verification action was to determine whether hazardous constituents and, in particular, dioxins and dibenzofurans were present in subsurface soils at Sites 1 and 5. The scope of work included soil boring, sampling and laboratory analysis.

Mobilization of personnel and equipment began on 02 December 1996. Field work was performed from 04 December 1996 to 16 December 1996.

MK provided project management, construction management, as well as environmental, health and safety and quality control oversight. MK's primary subcontractor was Bhate Environmental Associates Inc., a Small Disadvantaged Business Enterprise (SDBE), which provided drilling services. Southwest Laboratory of Oklahoma, Inc. provided analytical laboratory services under contract to MK. ABB Environmental Services provided on-site technical consultation during soil boring and sampling.

The Naval Technical Representative (NTR) and the Resident Officer-in-Charge of Construction (ROICC) provided oversight during field activities and acted as liaison between MK and base officials. The ROICC was provided with the Daily Contractor Production Report and Quality Control Report.

1.2 PLANNING DOCUMENTS

The following documents were used to plan the field verification action.

Work Plan, Revision 0, [MK 1996], including:

- Appendix A, *Site Safety and Health Plan*
- Appendix B, *Quality Control Plan*
- Appendix C, *Chemical Data Acquisition Plan*
- Appendix D, *Waste Management Plan*
- Appendix E, *Environmental Protection Plan*
- Appendix F, *Technical Specifications*

The *Work Plan* describes the definable features of work to be performed for the verification action. The current work included soil boring, soil sampling and laboratory analysis only. The results from the current work will determine if the remaining definable features of work, such as test trenching and drum removal, will be performed.

2.0 SITE BACKGROUND

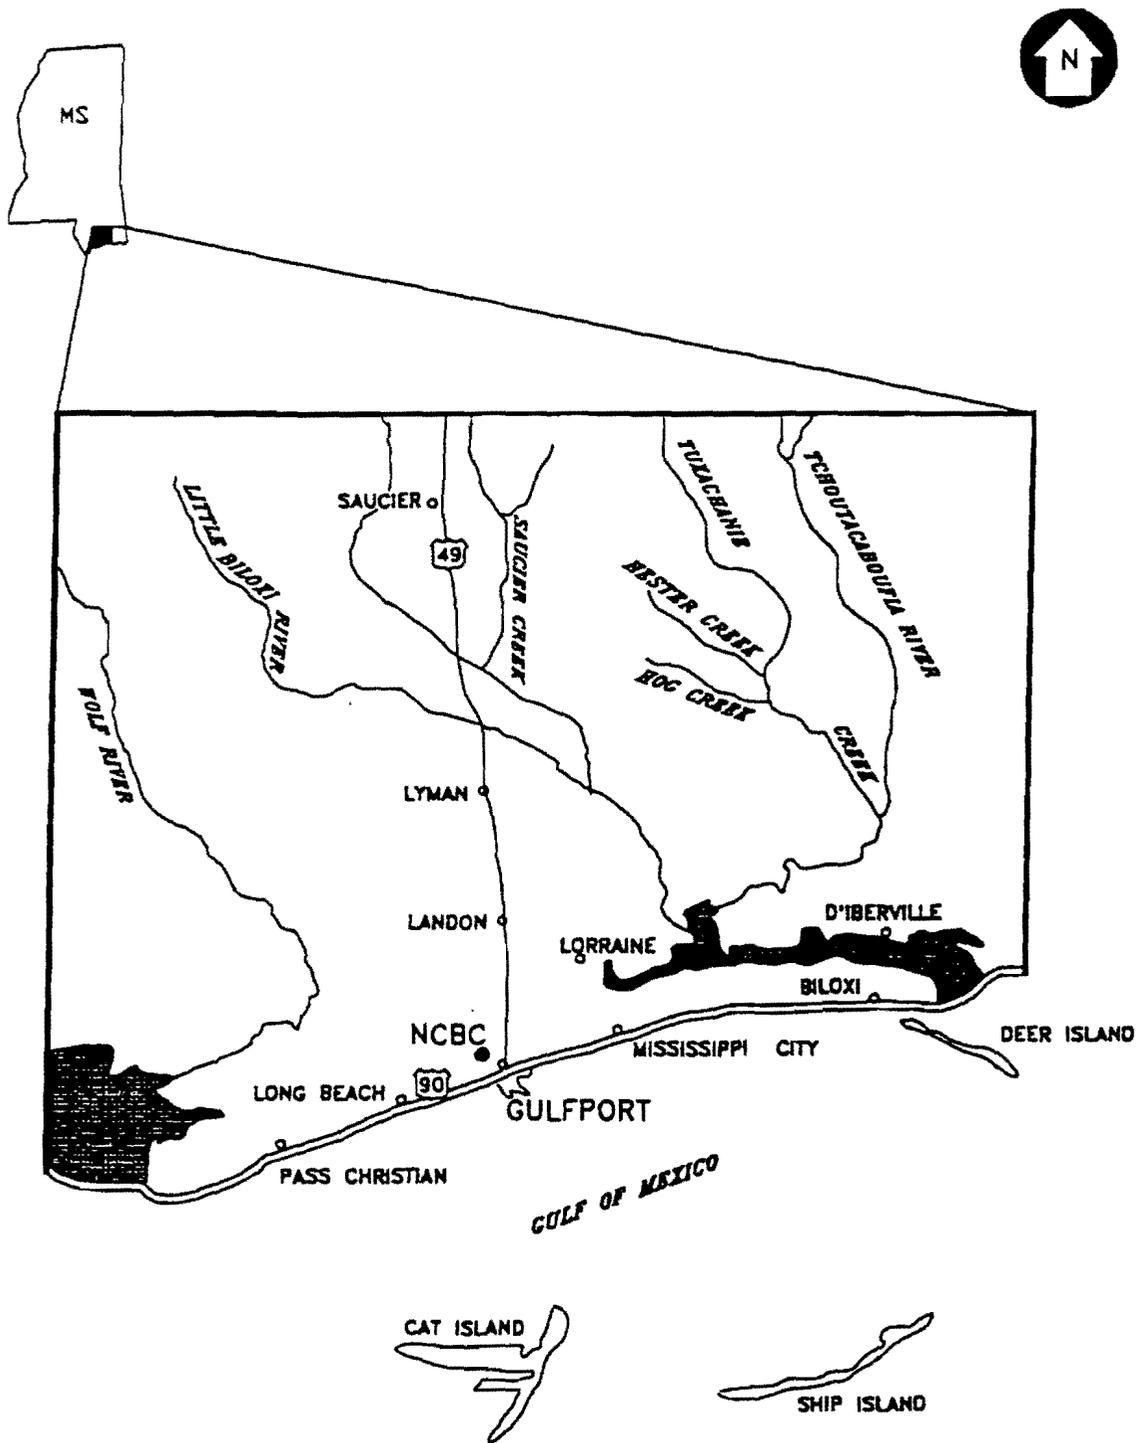

CBC Gulfport is located in the city of Gulfport, in Harrison County, in the southeastern corner of the State of Mississippi, as shown on Figure 2-1. CBC Gulfport supports four Naval Mobile Construction Battalions and serves as the focal point for deployment of Naval Construction Force (NCF) personnel for the Atlantic Fleet battalions. The locations of the two sites are shown on Figure 2-2.

2.1 SITE 1, TRAINING AREA

Site 1, currently used as a Training Area, is shown on Figure 2-3. The site is an inactive landfill, where an unknown quantity of chemical wastes containerized in 55-gallon drums was disposed by trench-and-fill operation between 1942 and 1948. The site was subsequently backfilled with soil and is now covered with planted trees, grass areas and buildings associated with the training mission of the base.

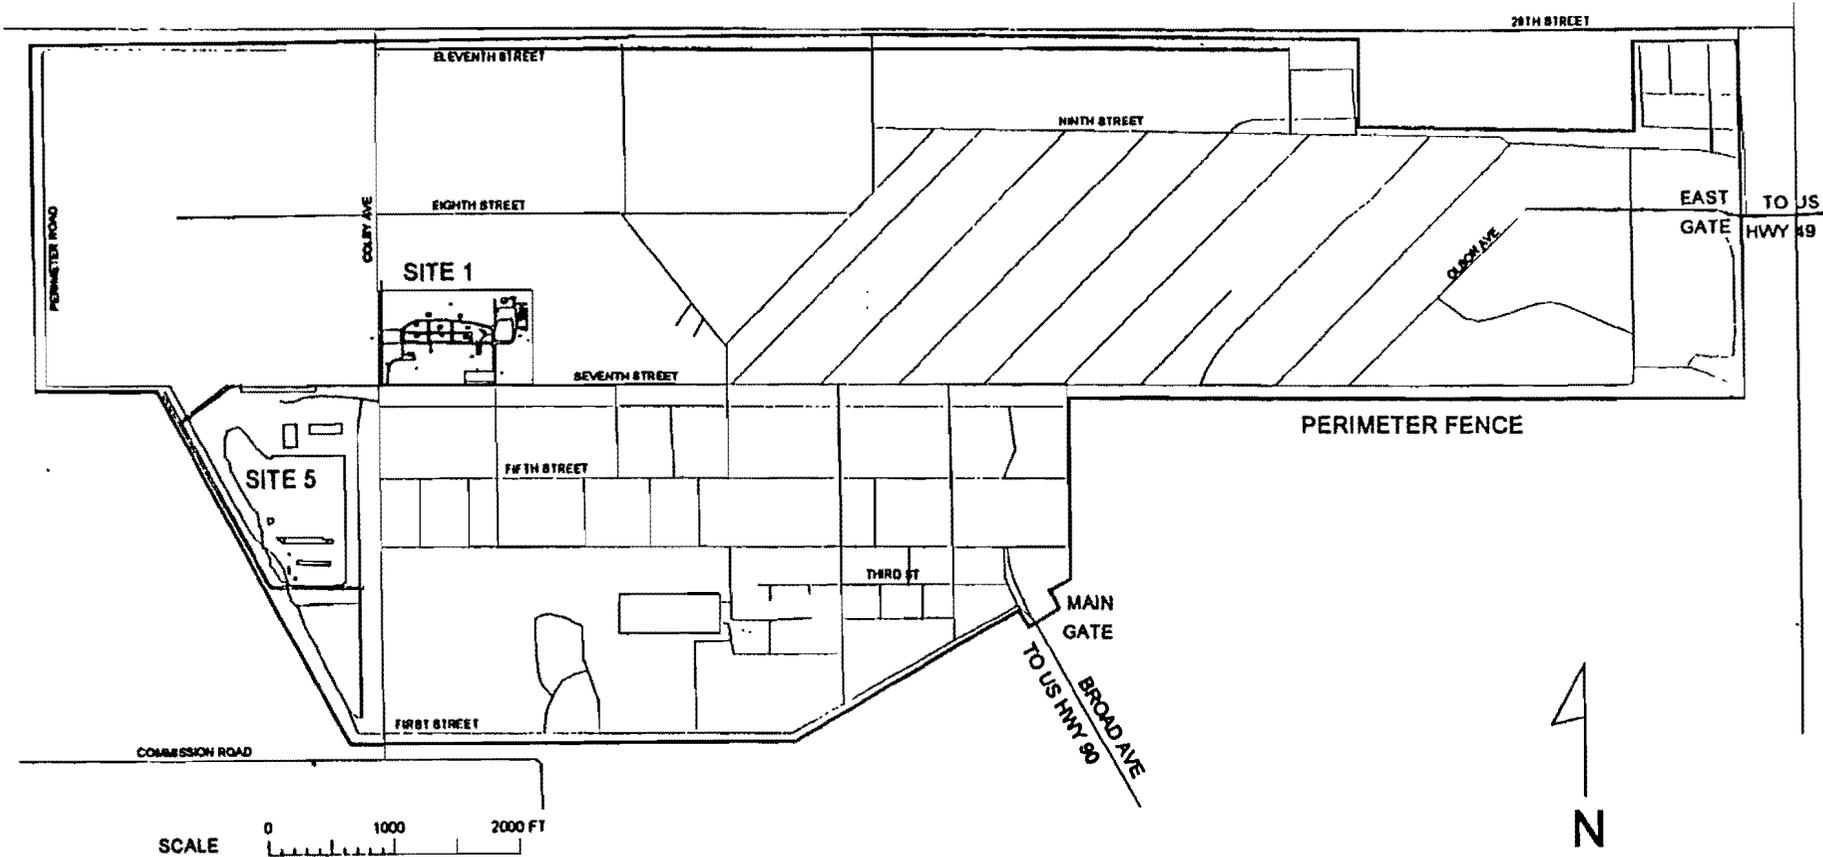

2.2 SITE 5, HEAVY EQUIPMENT TRAINING AREA

Site 5 consists of an area located between Fourth Street and Colby Avenue, as shown on Figure 2-4. An estimated 6,000 cubic yards of solid waste, an unknown quantity of liquid waste (not containerized), 50 to 100 drums of liquid dichlorodiphenyltrichloroethane (DDT) and boxes of powdered DDT were disposed by trench-and-fill method from 1972 to 1976. An unknown quantity of damaged drums containing herbicide orange was also reported to have been disposed at the site. The site was eventually covered with four to six feet of fill. Therefore, the potential for the presence of agent orange provided the need to perform sampling for the presence of dioxin.

3.0 FIELD ACTIVITIES

Field activities were scheduled around the ongoing training activities at the base. At Site 1, some areas are occupied by the base for training activities. Field activities were performed on the week ends in these areas.

3.1 SOIL BORING

Soil boring and sampling were performed at Sites 1 and 5 from 04 December 1996 to 16 December 1996. Prior to soil boring and sampling excavation permits (Appendix B) were obtained from the base. Soil sampling was performed using a Geoprobe™ sampling system mounted on a four wheel drive all terrain vehicle. At the end of each day, the Geoprobe™ sampling equipment and the vehicle were taken off the base. The photographs of soil boring and sampling activities are provided in Appendix A.

3.1.1 Boring Locations

As discussed in the *Work Plan*, the location of the borings were selected based on the results of previous geophysical investigations [MK, 1995]. Thus, soil borings were located in the following anomaly areas:

- Site 1: Training Area - anomaly areas A1, A2, A3, A4, A5, and B1.
- Site 5: Heavy Equipment Training Area - anomaly areas A1, A2, A3, A5, A6, A9 and A10.

Prior to start of the field work, the boring locations were marked with stakes and flags and excavation permits obtained from the base. The boring locations are shown on Figures 3-1 and 3-2.

3.1.2 Soil Sampling

Generally, two soil samples were collected from each borehole. The first sample was collected just above the water table and the second sample was collected at five feet below the top of the water table. Only one sample was collected when the soil boring encountered groundwater prior to the collection of the first sample. Samples were collected using the Geoprobe™ sampler as follows:

- Stainless steel tubes (1.5 inch outside diameter) were advanced hydraulically to two feet above the groundwater level
- The stop-pin at the end of the stainless steel tube was removed
- A 24-inch long brass liner (segmented to four 6-inch sections) that had been placed inside the tube was advanced to collect the first soil sample
- The brass liner with the soil sample was retrieved from the hole
- The ends of three brass liners were covered with teflon tape, capped and labeled
- A reading of organic vapor concentration was taken from the soil sample of the fourth brass liner and this sample was used as a field duplicate, when required
- The stainless tubes were advanced an additional 5 feet and the second sample was collected

The samples were labeled and placed in a cooler with ice. The chain-of-custody (COC) forms (Appendix C) were completed and the cooler was shipped to the off-site laboratory by a courier service for overnight delivery. The completed boring was backfilled the same day with cement bentonite grout.

3.1.3 Boring Logs

A soil boring log was prepared for each boring, as shown in Appendix D. The boring logs provide information on the sample depth, sample identification number and a brief description of the materials encountered. A review of the boring logs indicated that the sites are underlain by fill material consisting of fine to medium grained sand. Groundwater was encountered below ground surface (bgs) as follows:

- Site 1 - three feet to 12 feet
- Site 5 - 7.5 feet to 10 feet

3.2 DECONTAMINATION

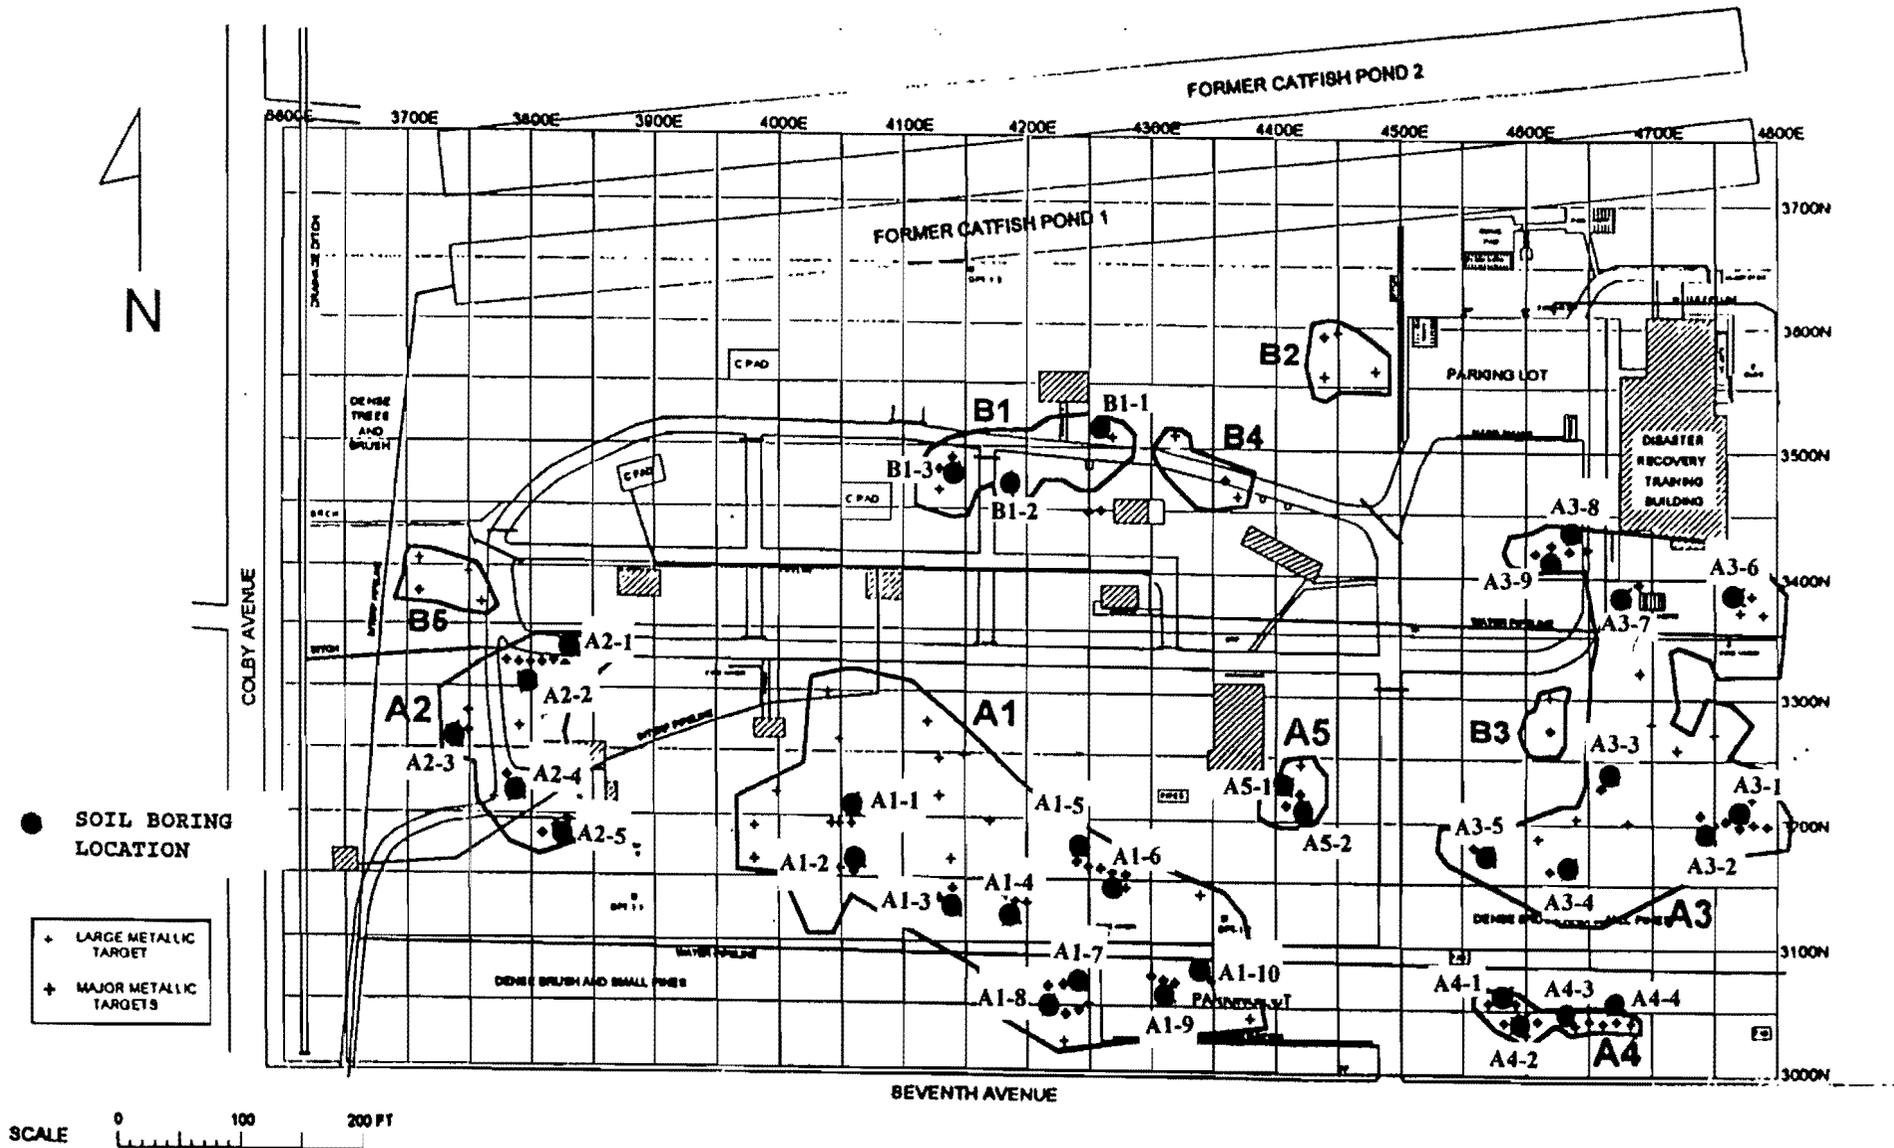

A central decontamination facility was constructed at each site using sand bags and a 60-mil high-density polyethylene (HDPE) liner. Decontamination of boring equipment was performed using a high-pressure/low-volume washer. The equipment was decontaminated prior to start of work and at the end of each day.

Non-disposable sampling equipment were washed with Alconox™ and tap water and rinsed with analyte free water. Sampling tools were decontaminated prior to start of work and after each time they were used. The rinsate collected in the decontamination facility was pumped into 55-gallon drums.

3.3 INVESTIGATION DERIVED WASTE

The investigation derived waste (IDW) associated with soil boring and sampling activities included liquid and soil generated during decontamination, the HDPE liner and the disposable personnel protective equipment (PPE). The liquid, soil and PPE were stored in 55-gallon drums with labels. Samples were collected for disposal characterization from decontamination liquid and soil.¹

¹Note: At the time this report was written, the disposal of IDW was not complete. This information will be updated on the next revision of this report.

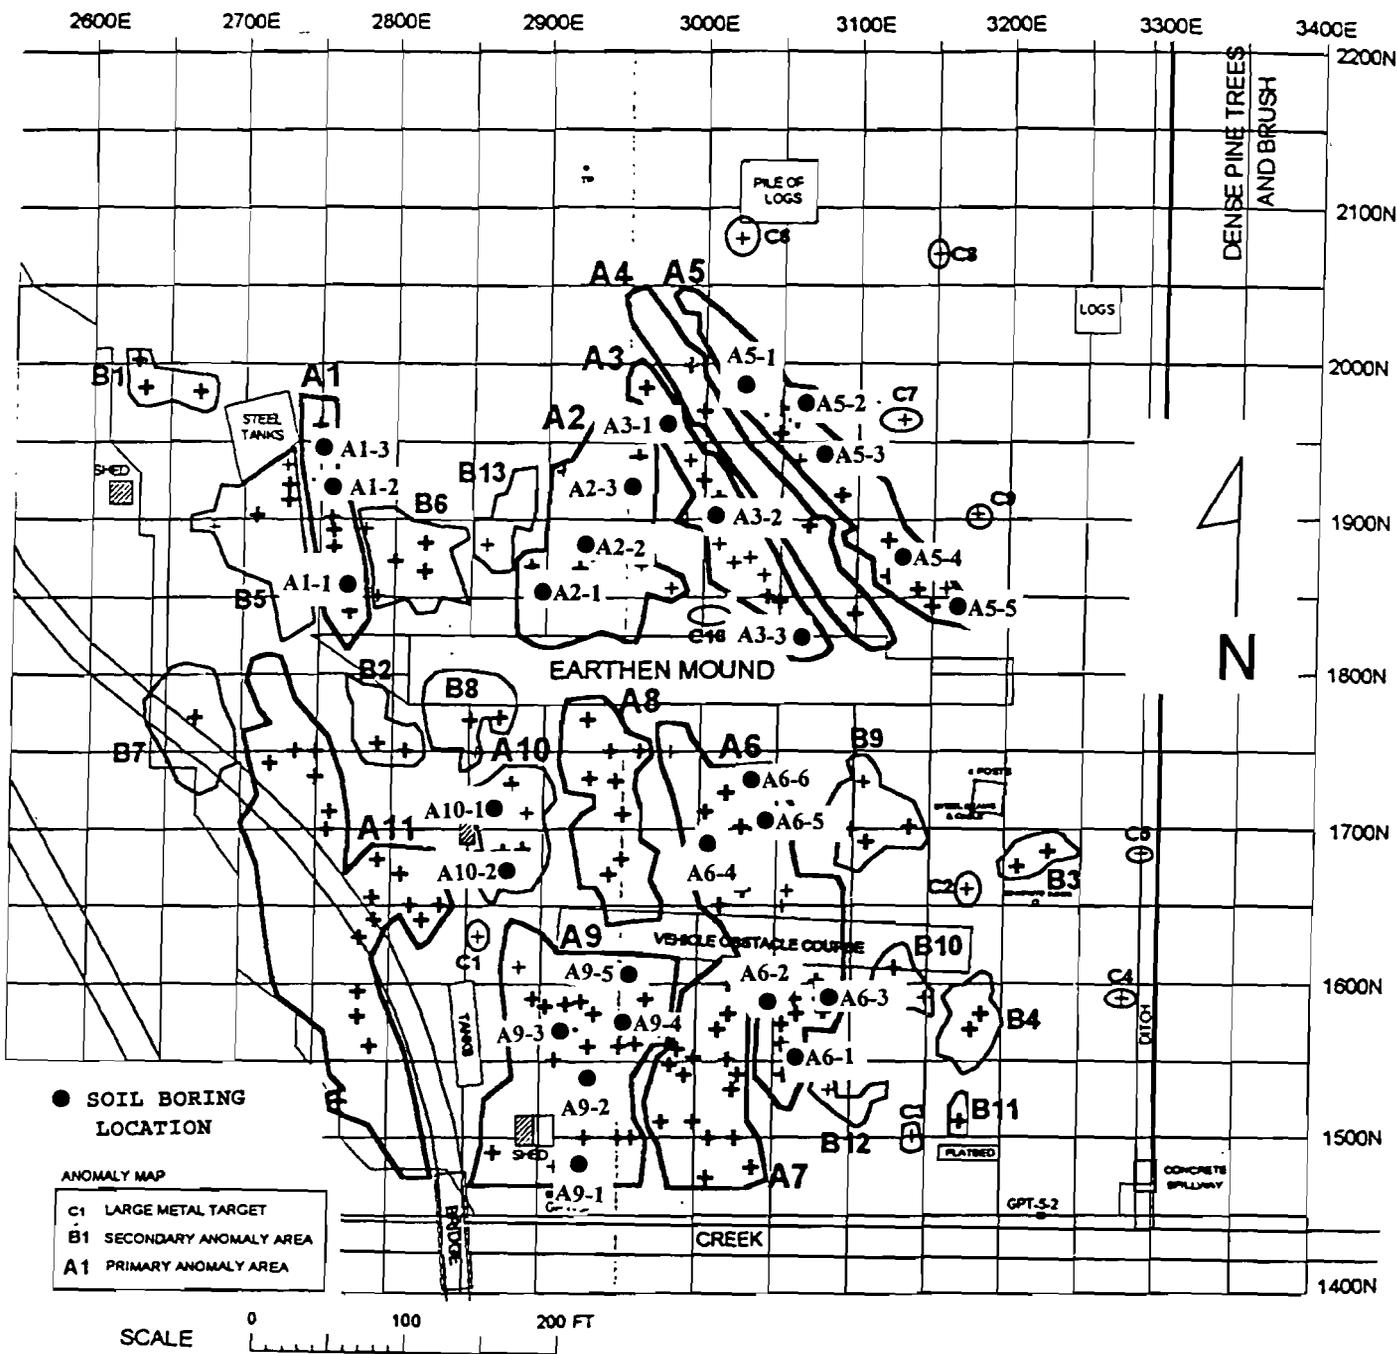

FIGURE 3-2
SOIL BORING LOCATIONS AT SITE # 5

4.0 ANALYTICAL RESULTS

Soil samples were analyzed for volatile organics, semi-volatile organics, pesticides, herbicides, metals, dioxins and furans. The analytical results are summarized in Appendix E. A discussion of the analytical results for each site and data quality control is provided below.

4.1 SITE 1

Analytical results from Site 1 soil borings indicate that, except for arsenic, concentrations of all other compounds were below the screening levels established in Appendix C, *Chemical Data Acquisition Plan (CDAP)*, of the *Work Plan* [MK 1996]. The screening level for arsenic was listed as 0.4 mg/kg, and concentrations reported for the soil borings ranged from 0.40 mg/kg, estimated below the reporting limit, to 4.3 mg/kg. The dioxin 2,3,7,8-TCDD, a main contaminant of concern, was not detected in any samples from this area.

4.2 SITE 5

Analytical results from Site 5 soil borings indicate that, except for arsenic, concentrations of all other compounds were below the screening levels established in Appendix C, *CDAP*, of the *Work Plan* [MK 1996]. The screening level for arsenic was listed as 0.4 mg/kg, and concentrations reported for the soil borings ranged from 0.45 mg/kg, estimated below the reporting limit, to 455 mg/kg. The dioxin 2,3,7,8-TCDD, a main contaminant of concern, was not detected in any samples from this area.

4.3 DATA QUALITY CONTROL

Analytical results were verified and compared with field and laboratory quality control (QC) sample data. The results of this verification are presented in this section.

4.3.1 Field Quality Control

Field quality control samples, including trip blanks, rinsate blanks, field duplicates, and a field blank, were collected during the work at CBC Gulfport to identify potential sources of error or cross contamination that occurred during collection, storage, or shipment of samples to the laboratory and to assist in evaluating precision and representativeness.

Trip blank sample results were evaluated to identify any cross-contamination that may have occurred during storage and shipping of the samples to the analytical laboratory. Trip blank samples were received in sealed containers from the laboratory and were not opened at the site. No target analytes were present in the trip blanks.

Equipment rinsate blanks were evaluated to assess the effectiveness of sampling equipment decontamination. Equipment rinse blanks showed no analytes present above the reporting limits. Several analytes were estimated below the reporting limits for each of the rinse blanks. Dioxin/furans were flagged as being due to laboratory contamination. Toluene, bis(2ethylhexyl)phthalate, barium, chromium, selenium and/or lead were estimated at low levels in the rinse blanks; only barium was detected in a corresponding laboratory blank. However, the levels of these analytes are such that corresponding soil boring sample results are likely not affected.

The field blank sample was evaluated to identify potential sources of error or cross contamination that occurred during collection, storage, or shipment of samples to the laboratory. Although several analytes

were estimated below the reporting limits, the field blank showed no analytes present above the reporting limits. Dioxin/furans were flagged as being due to laboratory contamination. Toluene, chromium and selenium were estimated at low levels in the field blank; none of these analytes were detected in corresponding laboratory blanks. However, the levels of these analytes are such that corresponding soil boring sample results are likely not affected.

Samples GPTS5BA5406D, GPTS5BA9413D, GPTS5BA9314D, GPTS5BA5109D (corrected site-id should read GPTS1BA5109D), and GPTS5BA10206D were identified as field duplicates collected during sampling. Precision objectives for field duplicate samples are established in the CDAP [MK 1996] and data are evaluated to determine potential variability introduced by soil heterogeneity and sampling technique. Field duplicate samples were taken from the fourth sleeve of soil collected for a given soil boring, when there was adequate sample volume available. Precision is evaluated using relative percent difference (RPD) between reported concentrations for analytes which were detected above the reporting limit.

Field duplicate precision for volatiles and herbicides met the precision objective of 30% RPD. Precision was acceptable for the majority of semi-volatile analytes, with the exception of two analytes. RPD for phenol ranged from 29% between samples GPTS5BA9314D and GPTS5BA9314, to 94% between samples GPTS5BA5406D and GPTS5BA5406. Bis(2-ethylhexyl)phthalate precision was acceptable for all field duplicate pairs except GPTS5BA9314D and GPTS5BA9314, which exhibited 81.5% RPD. Pesticide analytes all showed acceptable precision, except heptachlor, which was reported at 1.9 ug/kg in sample GPTS5BA9314, but was not detected in GPTS5BA9314D. Several dioxins / furans were detected in only one sample of a field duplicate pair. Metals were not analyzed for any of the field duplicate samples due to lack of sample volume, and therefore, no precision data is available for metals. Imprecision for the analytes noted may be due in part to the collection method for field duplicates, which resulted in soil from different depths being analyzed. Because no analytes other than arsenic were detected at concentrations above screening levels, results are deemed to be acceptable for intended data quality objectives.

4.3.2 Laboratory Quality Control

Laboratory analytical data was evaluated by the assessment of precision, accuracy, representativeness, comparability and completeness.

Precision is a measure of the reproducibility of measurements under a given set of conditions. Laboratory duplicates, matrix spikes and matrix spike duplicates were used to determine the precision of the analytical process.

Accuracy is a measure of the bias in a measurement system, and defined as the closeness of the reported value to the true value. The accuracy of a measurement system was assessed by evaluating the results of quality control samples such as matrix spikes, analytical surrogates and the use of field/trip blanks, and equipment rinsate blanks.

Representativeness in the laboratory is ensured by using the proper analytical procedures, meeting sample holding times and analyzing and assessing field duplicated samples. Comparability is a qualitative parameter expressing the confidence with which one data set can be compared with another. Analytical data are considered to be comparable when similar sampling and analytical methods are used and documented per the CDAP [MK 1996]. Laboratory completeness is a measure of the amount of valid measurements obtained from all measurements taken in the project.

The laboratory performed method blank, sample matrix spike and matrix spike duplicate, surrogate, and standard matrix spike analyses in order to evaluate laboratory accuracy and precision. MK reviewed the laboratory data received to determine whether data quality objectives were met for the sampling and

analytical programs through the assessment of precision, accuracy, representativeness, comparability and completeness.

With each volatile and dioxin/furan analysis performed, one or more corresponding method blanks contained low levels of at least one target analyte. In each case, the corresponding sample results have been flagged appropriately. Method blanks analyzed by all other methods were clean. Most sample surrogate recoveries fell within acceptable ranges to meet the project data quality objectives. In cases where surrogate recoveries fell outside of criteria and the samples were rerun, the surrogates recovered similarly in both analyses, indicating the possibility of a matrix interference. In several cases, a spiked sample contained surrogate recoveries that did not meet criteria. However, these spiked samples showed acceptable recoveries for target analytes, indicating that surrogate recoveries in these instances may not predict target analyte performance. The water samples sampled for disposal exhibited low surrogate standards for the pesticide, herbicide, semi-volatile and dioxin/furan analyses.

The sample matrix spikes and matrix spike duplicates (MS/MSD) had acceptable accuracy and precision, with the following exceptions: dinoseb, MCPA, and dalapon recovered outside of established criteria in several herbicides analyses, but the corresponding samples did not contain any hits for these analytes. One analytical batch of pesticides showed recoveries for PPDDT and PPDDD slightly below the criteria. Phenol exhibited low recoveries in one analysis, which may have been in part due to the concentration of phenol in the unspiked sample relative to the spike amount in the MS and MSD; phenol recoveries were acceptable in the corresponding laboratory standard spikes.

Laboratory standard spikes had high recoveries for several herbicides and volatile analytes, for which no corresponding samples showed hits. One analytical batch of pesticides showed recoveries for PPDDE, PPDDT and PPDDD slightly below the criteria. However, all other laboratory spikes performed exhibited acceptable accuracy and precision.

Data quality objectives for accuracy, precision, comparability and completeness were outlined in the CDAP [MK 1996]. Overall, the data quality objectives for this project have been met and data is felt to be acceptable as flagged.

5.0

CONCLUSIONS AND RECOMMENDATIONS

A field verification action was performed at Sites 1 and 5 of CBC Gulfport, Mississippi. Soil boring and sampling was performed at 60 locations. Soil samples were analyzed for volatile organics, semi-volatile organics, pesticides, herbicides, metals, dioxins and furans. Analytical results indicate that the only target analyte present above the established screening levels is arsenic. The main contaminant of concern at the sites, 2,3,7,8 - TCDD, was not detected in the samples collected. Therefore, it is recommended that the work proceed at Sites 1 and 5 with test trenching, which is the next project activity in the *Work Plan* [MK 1996].

HOLE DIAMETER: 1.5
in

LOGGED BY: Matt Thomas

DEPTH TO WATER (ft bgs): 5

Depth below surface (ft)	SAMPLE				Description: Name, grain size distribution, color, moisture content, density, unusual observation (staining, odor, etc.)
	Sample Interval	Recovery (Inches)	PID Result (ppm)	Sample I.D. (Offsite analysis)	
refusal 2.5' offset 5' South					
refusal 3.0' offset 2.5' back					
refusal 3'4" offset 7.5' forward					
refusal 3.0' offset 6'W 3'N					
3-5.0	10"		RAE 40.5	GPT S5 BA4103	Sand: medium to coarse, grey, saturated @ tip, tan mottling
9-11.0'	18"		RAE 8.4	GPT S5 BA4109	Sand: medium, light to dark brown, saturated

GENERAL NOTES:

At 3' depth it appeared the probe penetrated something. The sample cone also had a small piece of metal wedged into the shoe. Additionally, after 3 gallons of grout the hole wasn't fully grouted so the grout was forced to bridge and plug the hole.

ORGANICS QUALIFIER FLAGS

D	Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture. For example, 10 U for phenol in water if the sample final volume is the protocol-specified final volume. If a 1 to 10 dilution of extract is necessary, the reported limit is 100 U. For a soil sample, the value must also be adjusted for percent moisture. For example, if the sample had 24% moisture and a 1 to 10 dilution factor, the sample quantitation limit for phenol (330 U) would be corrected to: $\frac{330 \text{ U}}{D} \times df \text{ where } D = \frac{100 - \% \text{ moisture}}{100}$ and $df = \text{dilution factor}$ at 24% moisture, $D = \frac{100-24}{100} = 0.76$ $\frac{330 \text{ U}}{76} \times 10 = 4300$ U rounded to the appropriate number of significant figures
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identify compounds where a 1:1 response is assumed, or when the mass spectral data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero. For example, if the sample quantitation limit is 10 µg/L, but a concentration of 3 µg/L is calculated, report it as 3J. The sample quantitation limit must be adjusted for both dilution and percent moisture as discussed for the U flag, so that if a sample with 24% moisture and a 1 to 10 dilution factor has a calculated concentration of 300 µg/Kg and a sample quantitation limit of 430 µg/Kg, report the concentration as 300J on Form I.
N	Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the N code is not used.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns (see Form X). The lower of the two values is reported on Form I and flagged with a "P".
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS. Single component pesticides > 10 µg/l in the final extract shall be confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action. This flag must be used for a TIC as well as for a positively identified TIC compound.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis. If one or more compounds have a response greater than full scale, the sample or extract must be diluted and reanalyzed according to the specifications in Exhibit D. All such compounds with a response greater than full scale should have the concentration flagged with an "E" on the Form I for the original analysis. If the dilution of the extract causes any compounds identified in the first analysis to be below the calibration range in the second analysis, then the results of both analyses shall be reported on separate Form I. The Form I for the diluted sample shall have the "DL" suffix appended to the sample number.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is reanalyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and all concentration values reported on that Form I are flagged with the "D" flag.
A	This flag indicates that a TIC is a suspected alcohol-contamination product.
X	Other specific flags and footnotes may be required to properly define the results. If used, they must be fully described and such descriptions attached to the Sample Data Summary Package and the Case Narrative. If more than one is required, use "Y" and "Z", as needed. If more than five qualifiers are required for a sample result, use the "X" flag to combine several flags, as needed. For instance, the "YX" flag might combine the "A", "E", "P", and "D" flags for some sample.

INORGANICS CLP QUALIFIER FLAGS

B	The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL), if the analyte was analyzed for but not detected, a "U" must be entered.
E	The reported value is estimated because of the presence of interference. An explanatory note must be included under Comments on the Cover Page (if the problem applies to all samples) or on the specific FORM I - IN (if it is an isolated problem).
M	Duplicate injection precision not met.
N	Spike sample recovery not within control limits.
S	The reported value was determined by the Method of Standard Additions (MSA).
W	Post-digestion spike for Furnace AA analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance. (See Exhibit E.)
*	Duplicate analysis not within control limits.
+ -	Correlation coefficient for the MSA is less than 0.995.

SOUTHWEST LABORATORY OF OKLAHOMA, INC.

1700 W. Albany • Suite "C" • Broken Arrow, Oklahoma 74012 • 918-251-2858 • FAX: 918-251-2599

METHODOLOGY

SM = Standard Methods, 17th Edition, 1989
EPA = #EPA600/4-79-020, March 1983
SW = EPA Methodology, "#SW846", 3rd Edition,
July, 1992

GENERAL QUALIFIER FLAGS

B - Analyte is detected in blank as well as sample.
J - Estimated value: concentration is below limit of
quantitation
T - Trace Amount
U - Not detected above quantitation limit
> - Concentration greater than value reported
E - Compound exceeds calibration range
D - Sample dilution run or surrogates diluted out
sample run at secondary dilution
I - Not quantifiable due to matrix interference
* - Surrogate outside of QC limits on both original
and re-analysis

TEST SPECIFIC FOOTNOTES

TPH 8015

- 1 - Analysis shows miscellaneous peaks which cannot be identified as any specific pattern. Response factor for nearest eluting hydrocarbon standard was used to calculate concentration. Numbers indicate the approximate carbon chain length.
- 2 - Pattern is similar to, but not identical to standard.
- 3 - May be a weathered gasoline.

APPENDIX IX SEMIVOLATILES

- 1 - Detected as Diphenylamine
- 2 - Coelute on GC Column

TCLP SEMIVOLATILES

- 1 - 2-Methyl Phenol
- 2 - Compounds Co-elute (3&4-Methylphenol)
- 3 - Combination of O, M, & P Cresols
