Tim Curtin/NAX Jacksonville

PREPARED BY: AGVIQ, LLC

DATE: June 12, 2015

## 1 Introduction

This technical memorandum (TM) documents the field activities, results, and conclusions of the Phase 3 Vapor Intrusion (VI) investigation of Operable Unit 3 (OU3), located at Naval Air Station (NAS) Jacksonville, Florida (Figure 1). The Phase 3 investigation included a subset of the buildings previously investigated during Phase 2. The primary objective of the Phase 3 investigation was to evaluate the short-term (i.e., sample duration comparison) and long-term (i.e., seasonal) temporal variability of indoor air and subslab soil gas volatile organic compound (VOC) concentrations, as recommended in the Phase 2 VI Investigation Report (AGVIQ-CH2M HILL, 2013).

Phase 3 field sampling was conducted from January 20 through February 5, 2014, in accordance with the Uniform Federal Policy Sampling and Analysis Plan (UFP-SAP) provided with the 2013 Combined Site Work Plan (AGVIQ, 2014). The data collected during Phase 3 was evaluated using a multiple-lines-of-evidence approach consistent with the Department of Defense (DoD) Vapor Intrusion Handbook (2009), Interstate Technology & Regulatory Council (ITRC) (2007), and U.S. Environmental Protection Agency (EPA) (2013) VI guidance documents.

## 2 Previous Investigations

The Phase 1 VI investigation, performed in 2010, identified 37 buildings for further investigation of the VI exposure pathway. Structures were retained for further evaluation based on their 1) location relative to site-specific VI groundwater screening level exceedances and potential vadose zone and groundwater sources of VOCs; 2) demolition status; 3) occupancy; and 4) the extent to which the building is enclosed (AGVIQ-CH2M HILL, 2010).

The Phase 2 VI investigation was conducted in 2012 and 2013 to determine if complete or significant VI exposure pathways exist for VI within 12 of the highest priority buildings of the 37 identified during Phase 1. During the 2012 sampling event, none of the 12 buildings investigated exhibited indoor air VOC concentrations that were both (1) attributable to VI

and (2) above indoor air screening levels. When VOCs were detected above indoor air screening levels, these VOC detections were attributable to background sources unrelated to VI. An indoor air sample collected during March 2013 (location AI09 in Building 103) had a concentration of trichloroethene (TCE) slightly above the cancer-based screening level but below the non-cancer screening level. The Phase 2 VI investigation determined that uncertainties existed with respect to temporal variability and the ability to predict future VI impacts in select buildings. Evaluation of the data indicated that any further assessment of uncertainties related to temporal variability would be best served by focusing on a subset of chlorinated VOCs in Buildings 101, 101C, and 103 (AGVIQ-CH2M HILL, 2013).

### 3 Vapor Intrusion Monitoring Investigation Methods

Three industrial buildings (Building 101, 101C, and 103) were selected as buildings of interest for the Phase 3 VI Investigation based on the conclusions and recommendations of the Phase 2 VI Report (AGVIQ-CH2M HILL, 2013). VOCs detected above subslab soil gas screening levels during the Phase 2 VI Investigation were selected as the chemicals of potential concern (COPCs) for Phase 3. The target analytes included TCE, tetrachloroethene (PCE), vinyl chloride, cis-1,2-dichloroethene (cis-1,2-DCE), and trans-1,2-DCE.

VI investigation field activities were conducted January 20 through January 23, 2014 and February 5, 2014, and included indoor air and subslab soil gas sampling within the three buildings. The VI evaluation methods used during the VI investigation are consistent with DoD (2009), ITRC (2007), and EPA (2013) VI guidance documents. The weeks during which the Phase 3 investigation field activities were conducted at NAS Jacksonville were colder than normal, with high and low daily temperatures 10 to 20 degrees below normal ([www.wunderground.com](http://www.wunderground.com)). This provided an ideal sampling time for assessing temporal variability as winter heating season conditions may increase VI-related indoor air VOC concentrations (1) a tighter building envelope due to closed windows and doors and (2) the building "stack effect" resulting from higher air temperatures indoors versus outdoors (EPA, 2013). Phase 3 sample locations are shown on Figures 2 through 4. The field notes and the field quality control (QC) documentation associated with the samples collected are provided in Attachment A. The chain-of-custody (COC) records are provided in Attachment B. Specific sampling locations are discussed in Section 5.

#### 3.1 Sample Collection Procedures

During the field event in January 2014, subslab soil gas was collected for VOC analysis using EPA Method TO-15 from subslab probes installed during Phase 2. In general, indoor and outdoor air samples were collected in axial tube passive samplers (henceforth abbreviated to passive sampler or samplers) for VOC analysis using EPA Method TO-17, but a subset of samples at Building 103 were also collected for select VOC analysis using EPA Method TO-15. Table 1 provides a summary of the samples collected at each building.

Prior to sampling the subslab probes in Buildings 101C and 103, the field team performed a water leak check to confirm that the probes had not been damaged since they were sampled during Phase 2. Two liters of subslab soil gas were purged from each probe into Tedlar<sup>®</sup> bags at a rate of 200 milliliters per minute (mL/min) using a sampling manifold (consisting of stainless steel Swagelok gas-tight valves and fittings and Teflon tubing) and a vacuum pump. Subslab soil gas samples were collected in SUMMA canisters equipped with flow controllers. The flow controllers regulated the sample collection rate to 200 mL/min,

resulting in a sample collection period of approximately 5 minutes. The subslab soil gas samples were submitted to ALS - Simi Valley, California, for VOC analysis by EPA Method TO-15.

Indoor air samples were collected using passive samplers in Buildings 101, 101C, and 103 from the same locations where samples were collected during Phase 2. The passive samplers were temporarily affixed to interior walls using carefully selected adhesive hooks (3M Command™ brand), rather than hanging them with string or wire as was done during Phase 2, which resulted in building occupants tampering with some of them. A review of product information (see Attachment C) indicated that no target analytes were present in the adhesive.

Indoor air samples were collected using SUMMA canisters at sampling locations BLDG103-AI03 and BLDG103-AI09 in Building 103. Indoor air samples were collected over a 24-hour period in SUMMA canisters equipped with flow controllers. The SUMMA canisters were placed at approximately the same sampling location as the passive samplers, and once activated they were left undisturbed for 24 hours.

Outdoor air samples were collected immediately upwind of Buildings 101, 101C, and 103 using passive samplers to assess ambient conditions and determine if VOC concentrations detected in indoor air may be due to outdoor background sources. The passive samplers were placed in secure locations and affixed to a fence or other easily accessible structure using zip-ties. In addition, a collocated 24-hour SUMMA sample was collected at BLDG103-AO01, upwind of Building 103.

- Field duplicates for subslab soil gas, indoor and outdoor air were collected at a minimum frequency of 1 field duplicate per 10 parent samples for each medium. The duplicate samples were analyzed to verify the reproducibility of the laboratory results and the degree of variability of reported concentrations. Field duplicate samples consisted of one unique sample, split into two aliquots, which were analyzed independently. T-connectors were used to attach two SUMMA canisters together for simultaneous duplicate sample collection. Duplicate passive samplers were hung adjacent to the parent passive sampler. Duplicate sample results are provided in Table 1.
- The data package also includes results from a VOC headspace sample test developed to assess the potential for background interference from the passive sampler adhesive hooks. Although some target analytes, notably PCE at a concentration of 430 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ), were detected in the headspace sample, examination of the EPA Method TO-17 test results suggests that the adhesive did not interfere with the passive sampler (TO-17) results because:
  - With the exception of Building 103, the TO-17 indoor air results for PCE were non-detect or “J” flagged low concentrations (i.e., between the detection limit and reporting limit); and
  - The locations where PCE was detected in Building 103 indoor air above the reporting limit correspond to subslab locations with elevated PCE.

Although the adhesive did not noticeably impact indoor air results, for future use of passive samplers at NAS Jacksonville (or elsewhere) it would be preferable to identify a means of deploying the samplers that avoids the potential for interference with indoor air results.

### 3.2 Field Quality Control Procedures and Data Management

The Phase 3 investigation was successfully conducted in accordance with the Work Plan (AGVIQ, 2014). All procedures during the field activities followed the requirements for technical, construction, and health and safety procedures detailed in the Work Plan.

Field notes documenting the subslab soil gas probe installation and subslab soil gas, indoor air, and outdoor air sampling activities are presented in Attachment A.

In addition, the following records and documents were maintained:

- Daily Production and QC Reports (including during construction activities (Attachment A))
- Safety meeting minutes, pre-task safety planning records, safe behavior observations, and daily health and safety reports (recorded and submitted to the AGVIQ Health and Safety Manager on a routine basis) (Attachment A)

Laboratory electronic data deliverables (EDDs) were submitted to the project chemist for validation. Validated EDDs were submitted to Navy for long-term storage and accessing through the Naval Installation Restoration Information Solution (NIRIS) system.

### 3.3 Waste Management

Waste generated during the Phase 3 field investigation was managed in accordance with the Waste Management Plan in the Combined Site Work Plan (AGIVQ, 2014). The following uncontaminated wastes were generated during the Phase 3 field activities:

- Personal protective equipment (PPE) and used sample equipment (e.g., plastic tubing and Tedlar® bags)
- General refuse (e.g., marking tape, paper towels, plastic zip-ties)

All waste was disposed of in opaque trash bags and placed in trash receptacles onsite.

## 4 Screening Levels

Results from the Phase 3 sampling event were compared to risk-based VI Screening Levels (VISLs) to evaluate the vapor intrusion pathway (see Attachment D). The VISLs used in the Phase 3 VI evaluation are based on the November 2013 EPA Regional Screening Levels. The VISLs are based on a target cancer risk (TCR) range of  $1 \times 10^{-6}$  to  $1 \times 10^{-4}$  or a target hazard quotient (THQ) of 1.0. Evaluation presented in the Phase 2 VI Report (AGVIQ-CH2M HILL, 2013) determined the screening of subslab soil gas and indoor air results against the  $THQ = 0.1$  screening levels unnecessary based on the overestimation of cumulative risks.

For both the carcinogenic and non-carcinogenic VOCs observed in subslab soil gas, the site-specific attenuation factor (AF) of 0.001 was used to develop the soil gas screening levels (SGSLs). AFs are used to estimate how vapors attenuate across the slab and are used to calculate SGSLs. The conservative nature of the site-specific AF of 0.001 is supported by

previous work at OU3 and other sites; see Combined Work Plan, Appendix F, Worksheet 11 (AGVIQ, 2014) as well as the analysis presented in Appendix F of the Phase 2 VI Report (AGVIQ-CH2M HILL, 2013).

For the carcinogenic VOCs observed in indoor air, the EPA (1991) risk management range of  $1 \times 10^{-6}$  to  $1 \times 10^{-4}$  was used for this evaluation. Concentrations above this range (i.e., greater than  $1 \times 10^{-4}$  TCR) generally require further action (remediation and/or mitigation of the VI pathway). Concentrations within the risk management range may require further action (further evaluation, additional sampling, etc.) based on site conditions. Concentrations above the EPA (1991) non-cancer THQ of 1.0 may also require further action.

SGSLs for an industrial (non-residential) scenario are provided in Attachment D. Screening levels were not provided for cis-1,2-DCE because of a lack of inhalation toxicity values within the hierarchy of sources recommended by EPA.

## 5 Results, Quality Assurance, and Data Evaluation

### 5.1 Results

The Phase 3 EPA Methods TO-15 and TO-17 analytical results for subslab soil gas and indoor air are presented in Attachment E. Both TO-15 and TO-17 data were compared to the screening levels described in Section 4. Analytical results for the outdoor air are provided in Attachment E. Outdoor air data were not subject to screening since outdoor air is not the medium of concern for VI; rather, these data were used to evaluate outdoor background sources of VOCs that could impact indoor air. The sample locations and sample types are presented on Figures 2 through 4 along with both the Phase 2 and Phase 3 analytical results.

A discussion of short-term temporal variability observed in the data between EPA Methods TO-15 (24 hour) and TO-17 (14 day) and long-term temporal variability between Phase 2 (summer 2012) and Phase 3 (winter 2014) is also presented in this section. Figures 5 through 7 present the data used for temporal variability comparisons at each building.

### 5.2 Quality Assurance

The data quality evaluation assesses the effect of the overall analytical process on the usability of the analytical data. "Usability" in this context refers to whether results can be used by the project team based on their analytical soundness. Evaluation of laboratory performance is a check for compliance with the method requirements. Additionally, the Project Chemist conducted a review of the laboratory data to assess whether the analytical methods were within required control limits at the time of analysis. Evaluation of potential matrix interferences involves the review of several areas of results, including surrogate spike recoveries, matrix spike recoveries, and duplicate sample results. All data collected at OU3 during the Phase 3 VI investigation were found to be of acceptable quality. Details of the data quality evaluation are presented in Attachment F. The complete laboratory reports are presented in Attachment G.

### 5.3 Data Evaluation

The following observations were drawn from the indoor air and subslab soil gas data presented on Figures 2 through 4.

### 5.3.1 Subslab Soil Gas

- There were no VOCs detected in subslab soil gas at concentrations exceeding the  $10^{-4}$  TCR screening levels.
- TCE and PCE were detected in subslab soil gas at concentrations above the industrial cancer risk ( $10^{-6}$ ) based screening level at some locations in Buildings 101C and 103. These results indicate the presence of a potential subsurface source of vapor intrusion at these buildings but do not address the actual occurrence or significance of vapor intrusion. Indoor air results were used for that purpose, as described below.
- Evaluation of the long-term (seasonal) variability between Phase 2 (summer 2012) and Phase 3 (winter 2014) VOCs shows an overall decrease in subslab soil gas concentrations. The concentrations decreased in each of the four locations in Building 103 where the Phase 2 concentrations exceeded SGSLS. Of the 12 subslab locations within Buildings 103 and 101C, 9 showed decreasing VOC concentrations, by up to one order of magnitude. One location in Building 103 (BLDG103-GS02) showed a slight (approximately 10 percent) increase in TCE concentration. Two locations in the eastern portion of Building 101C (BLDG101C-GS04 and BLDG101C-GS05) exhibited up to a six-fold increase in TCE concentrations, with BLDG101C-GS04 having a concentration in 2014 above the SSGSL

### 5.3.2 Indoor Air

- Location BLDG103-AI09 exhibited a slight exceedance ( $3.25 \mu\text{g}/\text{m}^3$ ) of the indoor air screening level (IASL) of  $3 \mu\text{g}/\text{m}^3$ . Consistent with Risk Assessment Guidance for Superfund Part A (EPA, 1989), cancer risks are reported to one significant digit. Thus, this analytical result equates to a  $1 \times 10^{-6}$  cancer risk and does not require further action. No other indoor air locations had concentrations exceeding an IASL in samples analyzed using either EPA Methods TO-15 or TO-17.
- Short-term (sample duration) variability was evaluated by comparing 24-hour (EPA Method TO-15) and 14-day (EPA Method TO-17) samples at two Building 103 locations (BLDG103-AI03 and BLDG103-AI09). For a given analyte and location, there was less than a two-fold difference between the sample of different durations. This is consistent with observations presented the Phase 2 Report (AGVIQ-CH2M HILL, 2013) and supports the conclusion that short-term variability within a 2-week window is minimal.
- Long-term (seasonal) variability was assessed by comparing the Phase 2 (summer 2012 and winter 2013) and Phase 3 (winter 2014) data. Since assessing variability in TCE concentrations was the primary goal of the Phase 3 sampling, Figures 5 through 7 were prepared to show the TCE results for each of the three buildings. These figures support the tabulated results shown on Figures 2 through 4.

Excluding the Phase 2 result that was determined to be a result of background sources, the overall Building 103 dataset looks similar between the summer and winter events, with up to a three-fold increase in the maximum concentration in the winter samples. Building 101 sample results are similar. The winter samples from Building 101C showed an overall (up to four-fold) decrease compared to the summer samples.

The overall short-term and seasonal variability in TCE concentrations described above is within the range of what has been generally seen at other VI evaluation sites (e.g., Marine Corps Installation East – Marine Corps Base Camp Lejeune in Jacksonville, North Carolina [CH2M HILL, 2011]) and in other studies (Folkes et al., 2009; McHugh, 2007).

## 6 Conclusions and Recommendations

The Phase 3 VI investigation fulfilled the objective of evaluating short-term (i.e., sample duration comparison) and long-term (i.e., seasonal) temporal variability of indoor air and subslab soil gas VOC concentrations in OU3, which was identified as a data gap and recommended in the Phase 2 VI Investigation Report (AGVIQ-CH2M HILL, 2013). The following conclusions are based on the data and evaluations provided above:

- Vapor intrusion is not currently a significant exposure pathway based on comparison of the winter 2014 data to IASLs.
- Variability in indoor air concentrations was within the range observed at other Navy industrial sites and in the literature. The indoor-air TCE concentration observed at BLDG103-AI09 in winter 2013 corresponded to a cancer risk of approximately  $2 \times 10^{-6}$ , which slightly exceeded lower end of the target cancer risk range. This same location did not significantly exceed  $1 \times 10^{-6}$  cancer risk in winter 2014.
- Subslab source strength decreased overall. Two locations in the eastern portion of Building 101C showed increasing TCE concentrations, with one showing an exceedance of a SGSL where it had not exceeded previously.

Based on these findings, VI mitigation is not needed at this time. However, a subslab VOC source with concentrations exceeding VI-specific screening levels exists at Buildings 101C and 103. Since the findings were based on the subsurface environment and buildings in their current state, it may be prudent to consider measures to assess changes to site conditions that could affect the potential for significant vapor intrusion. Factors of interest might include:

- Building renovations resulting in new slab penetrations
- Major changes to building heating, ventilation and air conditioning (HVAC) systems
- Construction of new buildings
- Major, i.e., order of magnitude, changes in groundwater VOC concentrations
- Identification of new subsurface VOC sources

In addition, given the elevated subslab source strength in the center of Building 103 and the proximity of indoor-air TCE concentrations to the screening level, some degree of periodic VI monitoring in that portion of the building may be warranted after the completion of the Feasibility Study Addendum.

## Pre-Task Safety Plan (PTSP) and Safety Meeting Sign-in Sheet

Project: OU3 Phase 3 Location: NAS JAX Date: 1/20/14  
Supervisor: Eric Davis /ATL Job Activity: vapor intrusion sampling

Attendees:	Print Name	Sign Name
	<u>Kimberly Stokes</u>	<u>[Signature]</u>
	<u>Juan Acaron</u>	

List Tasks and verify that applicable AHAs have been reviewed:

- Subslab soil gas sample collection
- indoor / outdoor air sample collection

Tools/Equipment Required for Tasks (ladders, scaffolds, fall protection, cranes/rigging, heavy equipment, power tools):

- vacuum pump , extension cord
- PID
- GEM 5000 landfill gas meter

Potential H&S Hazards, including chemical, physical, safety, biological and environmental (check all that apply):

<input type="checkbox"/> Chemical burns/contact	<input type="checkbox"/> Trench, excavations, cave-ins	<input checked="" type="checkbox"/> Ergonomics
<input type="checkbox"/> Pressurized lines/equipment	<input type="checkbox"/> Overexertion	<input type="checkbox"/> Chemical splash
<input type="checkbox"/> Thermal burns	<input checked="" type="checkbox"/> Pinch points	<input type="checkbox"/> Poisonous plants/insects
<input checked="" type="checkbox"/> Electrical	<input checked="" type="checkbox"/> Cuts/abrasions	<input type="checkbox"/> Eye hazards/flying projectile
<input type="checkbox"/> Weather conditions	<input type="checkbox"/> Spills	<input checked="" type="checkbox"/> Inhalation hazard
<input type="checkbox"/> Heights/fall > 6 feet	<input type="checkbox"/> Overhead Electrical hazards	<input type="checkbox"/> Heat/cold stress
<input type="checkbox"/> Noise	<input type="checkbox"/> Elevated loads	<input type="checkbox"/> Water/drowning hazard
<input type="checkbox"/> Explosion/fire	<input checked="" type="checkbox"/> Slips, trip and falls	<input type="checkbox"/> Heavy equipment
<input type="checkbox"/> Radiation	<input checked="" type="checkbox"/> Manual lifting	<input type="checkbox"/> Aerial lifts/platforms
<input type="checkbox"/> Confined space entry	<input type="checkbox"/> Welding/cutting	<input type="checkbox"/> Demolition
<input type="checkbox"/> Underground Utilities	<input type="checkbox"/> Security	<input checked="" type="checkbox"/> Poor communications

Other Potential Hazards (Describe):

- Mobilize to site
- Site walk

Hazard Control Measures (Check All That Apply):

# Command™ Clear Decorating Clips

## Clear Hooks

- Damage-Free Hanging
- Clear clips, clear strips
- Color: Clear
- Package Contents: 20 clips, 24 strips
- Holds strongly and removes cleanly
- Easy to apply and remove
- Works on a variety of surfaces

Customer Rating: ★★★★★

Forget about nails, screws and tacks, Command™ Clear Hooks are fast and easy to hang! The revolutionary Command™ Clear Adhesive Strip, holds strongly on a variety of surfaces, including paint, wood, tile and more. Yet, removes cleanly - no holes, marks, sticky residue. Command™ Clear Hooks and Strips blend in seamlessly allowing you to show what matters most, your decor, not how it's hung up. Rehanging them is as easy as applying a replacement Mounting Strip, so you can take down, move and reuse them again and again!

## FAQs

Have questions? You're not the only one. Read the Command™ FAQ (and the answers) to learn more about using Command™ Products.

### Surfaces

**Q: To what surfaces will Command™ Products stick?**

A: Painted, stained or varnished wood, glass, tile, painted cinder block, plaster, metal, and painted wallboard.

[Command™ Outdoor Products](#) can also be used on smooth, sealed and finished surfaces including vinyl siding and fences, doors, windows, decks, gutters and trim. The Outdoor Product line is not recommended for use on rough surfaces, such as cement board, brick or rough-sawn wood.

**Q: Will Command™ Products stick to brick?**

A: No. Command™ Products are intended for mostly smooth surfaces such as those listed above. However, our products will stick to painted, smooth cinder block (the type found inside many school and office buildings).

**Q: Can I use Command™ Products on fresh paint?**

A: Paint should be fully cured (check paint can for manufacturer's cure time) before using Command Products. We recommend waiting a week before use on fresh paint. Also, alcohol may remove or dull the surface of fresh paint.

**Q: Can I use Command™ Products on wallpaper?**

A: No. Most wallpapers are too delicate and can tear when adhesives are applied.

**Q: Can I use Command™ Products on glass windows?**

A: It is okay to use Command™ Products if the glass is not exposed to direct sunlight and not flooded with water. For example: Do not use inside or outside on south or west windows. For glass shower doors use our special Water-Resistant line of products (blue strip) which are clearly marked on our packaging.

However, all [Command™ Outdoor Products](#) can be used on windows that have direct exposure to sunlight. These products are UV-resistant.

**Q: Can I use Command™ Products on my car windows?**

A: Due to weather temperature extremes, only [Command™ Outdoor Products](#) can be used on automobiles windows.

### Climate and Temperature

**Q: Can I use Command™ Products outside in cold climates?**

A: Yes you can with [Command™ Outdoor Products](#). The adhesive should be applied to a clean, smooth, dry surface when the temperature is above 15°F (-9°C). The products hold strongly down to -20°F (-29°C).

**Q: Can I use Command™ Products outside in hot climates?**

A: Yes you can with [Command™ Outdoor Products](#). The products hold strongly up to 125°F (51°C).

**Q: Can I use Command™ Products in my car?**

A: Because the adhesive could soften and lose adhesion above 125°F (51°C), we don't recommend using it in your car. In addition, vinyl dashboards and door panels contain high amounts of plasticizers to maintain flexibility, and this makes adhesion to these surfaces difficult.

### Product Information and Use

**Q: What are some possible uses for Command™ Products?**

A: Hooks are perfect for closets, lockers, offices, kitchens, laundry rooms, mud rooms, kids' rooms, dorm rooms, baths, boats and campers. Each package of hooks comes with

extra strips so the hooks can be reused or repositioned.

Picture Hanging Strips are great for hanging frames on the wall and creating collages without wall damage.

Spring clips are an efficient way to organize receipts in your office, photos on your computer or children's artwork on your refrigerator.

Command™ Outdoor Adhesive Strips are water- and UV-resistant, and specially formulated to withstand most weather conditions including rain, snow, and extreme temperatures. The hooks and clips hold strongly to a variety of smooth outdoor surfaces that were previously difficult to decorate - such as doors, windows, siding, decks, gutters and trim. Specifically designed for outdoor use, [Command™ Outdoor Products](#) make hanging wreaths, signs, thermometers, lights, or other seasonal decorations outside the home easy.

**Q: What happens if I pull too hard and the strip breaks?**

A: Simply heat up the base plate with a hair dryer to soften the adhesive. Then use dental floss to gently cut through the foam to remove the hook or hanger from the surface. Stretch or peel off the remaining adhesive. See [How to Use](#) page.

**Q: Why do I have to wait an hour before using the product?**

A: The one-hour wait ensures that the adhesive has had enough time to build strong adhesion to the wall or surface.

**Q: Why can't I clean the surface with a household cleaner?**

A: Many household and window cleaners leave behind a very thin layer of residue that affects how strongly the adhesive will bond to the surface.

**Q: Can I use more than one hook if I want to hang an item that's heavier than the weight listed on the package?**

A: No. We don't recommend it.

**Q: Is there latex in Command™ Strips?**

A: No. Command™ Strips contain an adhesive that is a synthetic rubber resin and does not contain natural rubber latex.

**Q: Where can I buy Command™ Products?**

A: Command™ Products are available at many retail stores and online. [Find a store near you.](#)

## Material Safety Data Sheet

Copyright, 2007, 3M Company. All rights reserved. Copying and/or downloading of this information for the purpose of properly utilizing 3M products is allowed provided that: (1) the information is copied in full with no changes unless prior written agreement is obtained from 3M, and (2) neither the copy nor the original is resold or otherwise distributed with the intention of earning a profit thereon.

This material safety data sheet (MSDS) is provided as a courtesy in response to a customer request. This product is not regulated under, and a MSDS is not required for this product by the OSHA Hazard Communication Standard (29 CFR 1910.1200) because, when used as recommended or under ordinary conditions, it should not present a health and safety hazard. However, use or processing of the product not in accordance with the product's recommendations or not under ordinary conditions may affect the performance of the product and may present potential health and safety hazards.

### SECTION 1: PRODUCT AND COMPANY IDENTIFICATION

**PRODUCT NAME:** Command (TM) Strips  
**MANUFACTURER:** 3M  
**DIVISION:** Construction And Home Improvement Prods  
  
**ADDRESS:** 3M Center  
 St. Paul, MN 55144-1000

**EMERGENCY PHONE:** 1-800-364-3577 or (651) 737-6501 (24 hours)

**Issue Date:** 08/01/2007  
**Supersedes Date:** 09/12/2006

**Document Group:** 21-8761-5

#### Product Use:

Intended Use: To be used in conjunction with Command (TM) hooks for hanging pictures, utensils, calendars, and other miscellaneous items.

### SECTION 2: INGREDIENTS

<u>Ingredient</u>	<u>C.A.S. No.</u>	<u>% by Wt</u>
POLYETHYLENE-EVA FOAM	None	50 - 60
Paper liner	None	25 - 35
Cured Adhesive	None	20 - 30

### SECTION 3: HAZARDS IDENTIFICATION

#### 3.1 EMERGENCY OVERVIEW

**Odor, Color, Grade:** No odor, white foam adhesive strip

**General Physical Form:** Solid

**Immediate health, physical, and environmental hazards:** This product, when used under reasonable conditions and in accordance with the 3M directions for use, should not present a health hazard. However, use or processing of the product in a

manner not in accordance with the product's directions for use may affect the performance of the product and may present potential health and safety hazards.

### 3.2 POTENTIAL HEALTH EFFECTS

**Eye Contact:**

Mechanical eye irritation: Signs/symptoms may include pain, redness, tearing and corneal abrasion.

**Skin Contact:**

Mechanical Skin irritation: Signs/symptoms may include abrasion, redness, pain, and itching.

**Inhalation:**

No health effects are expected.

**Ingestion:**

No health effects are expected.

## SECTION 4: FIRST AID MEASURES

### 4.1 FIRST AID PROCEDURES

The following first aid recommendations are based on an assumption that appropriate personal and industrial hygiene practices are followed.

**Eye Contact:** Flush eyes with large amounts of water. If signs/symptoms persist, get medical attention. No need for first aid is anticipated.

**Skin Contact:** Wash affected area with soap and water. If signs/symptoms develop, get medical attention. No need for first aid is anticipated.

**Inhalation:** Remove person to fresh air. If signs/symptoms develop, get medical attention. No need for first aid is anticipated.

**If Swallowed:** No need for first aid is anticipated.

## SECTION 5: FIRE FIGHTING MEASURES

### 5.1 FLAMMABLE PROPERTIES

<b>Autoignition temperature</b>	<i>No Data Available</i>
<b>Flash Point</b>	<i>No Data Available</i>
<b>Flammable Limits - LEL</b>	<i>No Data Available</i>
<b>Flammable Limits - UEL</b>	<i>No Data Available</i>

### 5.2 EXTINGUISHING MEDIA

Use fire extinguishers with class B extinguishing agents (e.g., dry chemical, carbon dioxide).

### 5.3 PROTECTION OF FIRE FIGHTERS

**Special Fire Fighting Procedures:** Wear full protective equipment (Bunker Gear) and a self-contained breathing apparatus (SCBA).

**Unusual Fire and Explosion Hazards:** No unusual fire or explosion hazards are anticipated.

**Note:** See STABILITY AND REACTIVITY (SECTION 10) for hazardous combustion and thermal decomposition information.

## SECTION 6: ACCIDENTAL RELEASE MEASURES

**Accidental Release Measures:** Not applicable.

## SECTION 7: HANDLING AND STORAGE

### 7.1 HANDLING

This product is considered to be an article which does not release or otherwise result in exposure to a hazardous chemical under normal use conditions.

### 7.2 STORAGE

Not applicable.

## SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

### 8.1 ENGINEERING CONTROLS

Not applicable.

### 8.2 PERSONAL PROTECTIVE EQUIPMENT (PPE)

#### 8.2.1 Eye/Face Protection

Not applicable.

#### 8.2.2 Skin Protection

Not applicable.

#### 8.2.3 Respiratory Protection

Under normal use conditions, airborne exposures are not expected to be significant enough to require respiratory protection.

#### 8.2.4 Prevention of Swallowing

Not applicable.

### 8.3 EXPOSURE GUIDELINES

None Established

**SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES**

<b>Odor, Color, Grade:</b>	No odor, white foam adhesive strip
<b>General Physical Form:</b>	Solid
<b>Autoignition temperature</b>	<i>No Data Available</i>
<b>Flash Point</b>	<i>No Data Available</i>
<b>Flammable Limits - LEL</b>	<i>No Data Available</i>
<b>Flammable Limits - UEL</b>	<i>No Data Available</i>
<b>Boiling point</b>	<i>Not Applicable</i>
<b>Density</b>	<i>Not Applicable</i>
<b>Vapor Density</b>	<i>Not Applicable</i>
<b>Vapor Pressure</b>	<i>Not Applicable</i>
<b>Specific Gravity</b>	<i>No Data Available</i>
<b>pH</b>	<i>Not Applicable</i>
<b>Melting point</b>	<i>Not Applicable</i>
<b>Solubility in Water</b>	Nil
<b>Softening point</b>	40 °C

**SECTION 10: STABILITY AND REACTIVITY**

**Stability:** Stable.

**Materials and Conditions to Avoid:** High shear and high temperature conditions

**Hazardous Polymerization:** Hazardous polymerization will not occur.

**Hazardous Decomposition or By-Products**

<u>Substance</u>	<u>Condition</u>
Carbon monoxide	Not Specified
Carbon dioxide	Not Specified

**Hazardous Decomposition:** Under recommended usage conditions, hazardous decomposition products are not expected. Hazardous decomposition products may occur as a result of oxidation, heating, or reaction with another material.

**SECTION 11: TOXICOLOGICAL INFORMATION**

Please contact the address listed on the first page of the MSDS for Toxicological Information on this material and/or its components.

**SECTION 12: ECOLOGICAL INFORMATION****ECOTOXICOLOGICAL INFORMATION**

Not applicable.

## CHEMICAL FATE INFORMATION

Not applicable.

## SECTION 13: DISPOSAL CONSIDERATIONS

**Waste Disposal Method:** Dispose of waste product in a sanitary landfill. As a disposal alternative, incinerate in an industrial or commercial facility.

Since regulations vary, consult applicable regulations or authorities before disposal.

## SECTION 14: TRANSPORT INFORMATION

**ID Number(s):**

44-0025-9729-0, 44-0025-9730-8, 44-0025-9731-6, 44-0025-9837-1, 44-0025-9838-9, 44-0025-9839-7, 44-0025-9998-1, 44-0025-9999-9, 70-0707-1818-7, 70-0707-2921-8, 70-0712-0425-2, 70-0712-0427-8, 70-0712-0464-1, 70-0713-0442-5, 70-0713-0444-1

Please contact the emergency numbers listed on the first page of the MSDS for Transportation Information for this material.

## SECTION 15: REGULATORY INFORMATION

### US FEDERAL REGULATIONS

Contact 3M for more information.

### STATE REGULATIONS

Contact 3M for more information.

### CHEMICAL INVENTORIES

This product is an article as defined by TSCA regulations, and is exempt from TSCA Inventory listing requirements.

Contact 3M for more information.

## INTERNATIONAL REGULATIONS

Contact 3M for more information.

This MSDS has been prepared to meet the U.S. OSHA Hazard Communication Standard, 29 CFR 1910.1200.

## SECTION 16: OTHER INFORMATION

### NFPA Hazard Classification

Health: 0 Flammability: 1 Reactivity: 0 Special Hazards: None

National Fire Protection Association (NFPA) hazard ratings are designed for use by emergency response personnel to address the hazards that are presented by short-term, acute exposure to a material under conditions of fire, spill, or similar emergencies. Hazard ratings are primarily based on the inherent physical and toxic properties of the material but also include the toxic properties of combustion or decomposition products that are known to be generated in significant quantities.

**Reason for Reissue:** The MSDS has been revised because 3M has adopted the 16-section ANSI/ISO format. The potential hazards of the product have not changed. We encourage you to reread the MSDS and review the information.

### Revision Changes:

Section 1: Product use information was modified.

Copyright was modified.

Section 3: Potential effects from eye contact was modified.

Section 3: Potential effects from skin contact information was modified.

Section 2: Ingredient table was modified.

Section 1: Initial issue message was modified.

Section 4: First aid for eye contact - decontamination - was added.

Section 4: First aid for eye contact - medical assistance - was added.

Section 4: First aid for skin contact - decontamination - was added.

Section 4: First aid for skin contact - medical assistance - was added.

Section 4: First aid for inhalation - termination of exposure - was added.

Section 4: First aid for inhalation - medical assistance - was added.

Section 16: Reason for reissue heading was added.

Section 16: Reason for reissue phrase was added.

**DISCLAIMER:** The information in this Material Safety Data Sheet (MSDS) is believed to be correct as of the date issued. 3M MAKES NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR COURSE OF PERFORMANCE OR USAGE OF TRADE. User is responsible for determining whether the 3M product is fit for a particular purpose and suitable for user's method of use or application. Given the variety of factors that can affect the use and application of a 3M product, some of which are uniquely within the user's knowledge and control, it is essential that the user evaluate the 3M product to determine whether it is fit for a particular purpose and suitable for user's method of use or application.

3M provides information in electronic form as a service to its customers. Due to the remote possibility that electronic transfer may have resulted in errors, omissions or alterations in this information, 3M makes no representations as to its completeness or accuracy. In addition, information obtained from a database may not be as current as the information in the MSDS available directly from 3M.

3M MSDSs are available at [www.3M.com](http://www.3M.com)

Industrial Screening Levels

Phase 3 OU3 Vapor Intrusion Investigation Report

NAS Jacksonville, Florida

Analyte	CAS	Units	Subslab Soil Gas Screening Levels <sup>2</sup> (SGSLs)			Indoor Air Screening Levels (IASLs)		
			Industrial Cancer Risk = 10 <sup>-6</sup>	Industrial Cancer Risk = 10 <sup>-4</sup>	Industrial Noncancer Hazard Quotient <sup>3</sup> = 1.0	Industrial Cancer Risk = 10 <sup>-6</sup>	Industrial Cancer Risk = 10 <sup>-4</sup>	Industrial Noncancer Hazard Quotient <sup>3</sup> = 1.0
cis-1,2-Dichloroethene <sup>1</sup>	156-59-2	µg/m <sup>3</sup>	NA	NA	NA	NA	NA	NA
Tetrachloroethene	127-18-4	µg/m <sup>3</sup>	47,000	4,700,000	180,000	47	4,700	180
trans-1,2-Dichloroethene	156-60-5	µg/m <sup>3</sup>	NA	NA	260,000	NA	NA	260
Trichloroethene	79-01-6	µg/m <sup>3</sup>	3,000	300,000	8,800	3.0	300	8.8
Vinyl Chloride	75-01-4	µg/m <sup>3</sup>	2,800	280,000	440,000	2.8	280	440

Notes:

<sup>1</sup>A SL for cis-1,2-DCE was not calculated due to the lack of inhalation toxicity data in the RSL tables

<sup>2</sup> These SGSLs were developed with a base-specific attenuation factor of 0.001; developed with EPA RSLs (November 2013)

<sup>3</sup> Screening levels based on a noncancer hazard quotient (HQ) of 0.1 were included in the Work Plan (CH2M HILL, 2012) as a basis for evaluating analytical quantitation and reporting limits. This is based on the possibility that multiple analytes are detected and the results cumulative noncancer hazard could exceed an HQ of 1 even if the HQ associated with individual analytes are below a HQ of 1. The potential for cumulative, indoor-air, noncancer hazards is addressed directly in Section 5.0 based on actual detections; thus, it is not necessary to screen subslab and indoor air results against the HQ = 0.1 screening levels and they are not considered further in this report.

**Notes:**

NA Not analyzed

J The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

**Bold indicates the analyte was detected**

Shading indicates the analyte exceeded screening criteria

MEMORANDUM

CH2MHILL

## Data Validation Summary - NAS Jacksonville / OU3 Phase III Vapor Intrusion Investigation 2014

**PREPARED FOR:** NAS Jacksonville / OU3 Phase III Vapor Intrusion Investigation 2014

**FROM:** Camden Robinson/CH2M HILL/ATL

**COPIES:** Eric Davis /Project Manager/CH2M HILL

**DATE:** April 8<sup>th</sup>, 2014

**SUBJECT:** Quality Assessment for Samples Collected January 21<sup>st</sup>, 2014 thru  
January 23<sup>rd</sup>, 2014

The purpose of this memorandum is to present the results of the data validation process for the samples collected at the Naval Air Station in Jacksonville, Florida. The samples were collected on January 21<sup>st</sup>, 2014 thru January 23<sup>rd</sup>, 2014. These samples were collected as a part of the OU3 Phase III Vapor Intrusion Investigation 2014 sampling event conducted at the site. The specific samples and analytical fractions reviewed are summarized below in Table 1.

The Quality Control areas that were reviewed and the resulting findings are documented within each subsection that follows. This data was validated for compliance with the analytical method requirements, the validation criteria outlined in the UFP-QAPP (CH2M HILL, April 2012), and the general guidance provided in the Department of Defense (DOD) Quality Systems Manual - Version 4.2 Final October 2010 (based on NELAC Voted Version - 5 June 2003). This process also included a review of the data to assess the accuracy, precision, and completeness based upon procedures described in the guidance documents such as the Environmental Protection Agency (EPA *National Functional Guidelines for Organic Data Review* (EPA 2008). Quality assurance/quality control (QA/QC) summary forms and data reports were reviewed.

Samples were submitted to Empirical Laboratory of Nashville, Tennessee, who subcontracted the samples to ALS Environmental in Simi Valley, California for the following analysis: EPA method TO-15 or TO-15 SIM Select List or Full List Volatile Organic Compounds (VOC) in Air.

Samples were also submitted to Beacon Environmental Services, Inc in Forest Hill Maryland, for the following analysis: EPA method TO-17 Select Volatile Organic Compounds (VOC) in Air.

[2] – VOC – Select List Volatile Organic Compounds in Air by EPA Method TO-17

## Organic Parameters

### Quality Control Review

The following list represents the QA/QC measures that were reviewed during the data quality evaluation procedure for organic data.

- **Holding Times** – The holding times are evaluated to verify that samples were extracted and analyzed within holding times.
- **Blank samples** – Method blanks were provided for this project. Blank samples enable the reviewer to determine if an analyte may be attributed to sampling or laboratory procedures, rather than environmental contamination from site activities.
- **Surrogate Recoveries** – Surrogate Compounds are added to each sample and the recoveries are used to monitor lab performance and possible matrix interference.
- **Lab Control Sample (LCS)** – This sample is a “controlled matrix”, either laboratory reagent water or Ottawa sand, in which target compounds have been added prior to extraction/analysis. The recoveries serve as a monitor of the overall performance of each step during the analysis, including sample preparation.
- **Field Duplicate Samples** – These samples are collected to determine precision between a native and it’s duplicate. This information can only be determined when target compounds are detected.
- **Laboratory Duplicate Samples** – The results from laboratory duplicate samples are used to evaluate that the laboratory is maintaining analytical or measurement precision.
- **GC/MS Tuning** – The mass spectrum of the tuning compound is evaluated for method compliance. The criteria are established to verify the proper mass assignment and mass resolution.
- **Initial Calibration** – The initial calibration ensures that the instrument is capable of producing acceptable qualitative and quantitative data for the compounds of interest.
- **Continuing Calibration** – The continuing calibration checks satisfactory performance of the instrument and its predicted response to the target compounds.
- **Internal Standards** – The internal standards (retention time and response) are evaluated for method compliance. The internal standards are used in quantitation of the target parameters and monitor the instrument sensitivity and response for stability during each analysis.

## Summary of Sample Analyses

### Hardcopy Data Packages

No major issues were identified as a result of data validation. Minor issues are described below. Project data qualifiers are added to the laboratory reports. A list of project data qualifiers is shown in Table 2. A list of qualifier codes and a brief description is shown in Table 3.

Field samples are qualified for the introduction of contaminants resulting from laboratory and field activities as measured in the method blank, equipment rinse blank, field blank, and trip blank audit samples. When present, equipment rinse blank, field blank, and trip blank audit samples are not qualified.

**TABLE 2**  
Project Qualifiers

QUALIFIER	
U	Undetected. Not detected or not detected at significantly greater than that in an associated blank. The analyte was analyzed for, but was not detected or is qualified as nondetect because of blank contamination.
UJ	Not detected, quantitation limit is estimated. Sample was analyzed for this parameter, but it was not detected above the reported quantitation limit. The quantitation limit for this parameter is estimated due to a quality control exceedance.
J	Estimated. The analyte was positively identified; the quantitation is an estimation because of discrepancies in meeting certain analyte-specific quality control criteria.
UR/R	Rejected. The data are rejected because of deficiencies in meeting QC criteria and may not be used for decision making.

**TABLE 3**  
Project Qualifier Codes

Code	Definition
FD	Field Duplicate
LD	Laboratory Duplicate

## Major Technical Issues

No major technical issues were identified.

## Minor Technical Issues for Select Volatile Organic Compounds (VOCs) Analyses by EPA Method TO-17

### Sample Login, Preservation, and Holding Time

All samples were received in good condition, properly preserved, and correctly labeled

### GC/MS Instrument Performance

All GC/MS Instrument Performance criteria were met.

### Calibration

All Initial, 2<sup>nd</sup> Source, and Continuing Calibration criteria were met.

### Blanks

There were no detects noted in the method blank samples.

### Laboratory Control Sample and Laboratory Control Sample Duplicate Recoveries

Laboratory control samples (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed with each sample preparation batch and analytical run. Laboratory accuracy objectives were met for all LCS/LCSD samples.

### Surrogate Recoveries

All surrogate recoveries were within acceptable quality control limits.

### Internal Standard Recoveries

All internal standard recoveries were within acceptable quality control limits.

### Field Duplicates

Field samples OU3-BLDG101-AI02-0114 and OU3-BLDG103-AI03-0114 were collected and analyzed in duplicate. Field duplicate precision objectives were met for all the samples.

## Sample Dilutions

The dilutions performed on the samples noted below were required due to the presence of high target analyte concentrations which resulted in elevated reporting limits:

OU3-BLDG101-AI02-0114

OU3-BLDG101P-AI02-0114

OU3-BLDG101-AI03-0114

The laboratory noted that an equipment failure caused the Unicarb tube desorption of the original sample analysis for sample OU3-BLDG101-AI03-0114 to fail, which resulted in the original analysis falling outside the 12 hour tune window. The recollected portion of this sample was subsequently analyzed along with the Chromosorb 106 tube and reported as one analysis. The recollected portion of this sample results in a dilution factor of six for those compounds targeted with Unicarb (vinyl chloride, trans-1,2-dichloroethene, and cis-1,2-dichloroethene).

## Data Rejected during the Data Validation Process

Some samples may be analyzed multiple times by the laboratory because of dilution requirements or because spike recoveries are outside the method target acceptance limits. The laboratory reports all analyses; therefore, it is possible that several sample results may exist for a specific sample and analysis. During the data validation, all the sample results are evaluated and the "best answer" for each sample and analysis is chosen, and the other results are rejected.

The initial results for trans-1,2-dichloroethene for samples OU3-BLDG101-AI02-0114 and OU3-BLDG101P-AI02-0144 were rejected because the samples required a dilution in order to obtain a result within the method target acceptance limits.

## Minor Technical Issues for Select List or Full List Volatile Organic Compounds (VOCs) Analyses by EPA Method TO-15

### Sample Login, Preservation, and Holding Time

All samples were received in good condition, properly preserved, and correctly labeled. Due to LIMs limitations, the laboratory reported all straight run analysis and additional diluted analyses as one analysis.

### GC/MS Instrument Performance

All GC/MS Instrument Performance criteria were met.

### Calibration

All Initial, 2<sup>nd</sup> Source, and Continuing Calibration criteria were met.

### Blanks

There were no detects noted in the method blank samples.

## Laboratory Control Sample and Laboratory Control Sample Duplicate Recoveries

Laboratory control samples (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed with each sample preparation batch and analytical run. Laboratory accuracy objectives were met for all LCS/LCSD samples.

## Surrogate Recoveries

All surrogate recoveries were within acceptable quality control limits.

## Internal Standard Recoveries

All internal standard recoveries were within acceptable quality control limits.

## Field Duplicates

Field samples OU3-BLDG103-AI03-0114, OU3-BLDG103-GS01-0114, and OU3-BLDG103-GS15-0114 were collected and analyzed in duplicate. Field duplicate precision objectives were not met for the samples listed in table 4 below:

**TABLE 4**  
Field Duplicate RPD Out of QC Limits: VOCs in Air  
*OU3 Phase III Vapor Intrusion Investigation 2014*

Compound	Affected Samples	%RPD
Tetrachloroethene	OU3-BLDG103-GS15-0114 / OU3-BLDG103-GS15P-0114	175%

Field duplicate precision could not be calculated for the samples listed below; therefore no qualifiers were applied.

Compound	Affected Samples
Trans-1,2-Dichloroethene	OU3-BLDG103-GS15-0114 / OU3-BLDG103-GS15P-0114
Cis-1,2-Dichloroethene	OU3-BLDG103-GS15-0114 / OU3-BLDG103-GS15P-0114
Trichloroethene	OU3-BLDG103-GS15-0114 / OU3-BLDG103-GS15P-0114

## Laboratory Duplicates

Laboratory duplicate precision objectives were not met for the sample listed in table 5 below, and the sample result was qualified as estimated "J":

**TABLE 5**  
Laboratory Duplicate RPD Out of QC Limits: VOCs in Air  
*OU3 Phase III Vapor Intrusion Investigation 2014*

Compound	Affected Samples	%RPD
Cis-1,2-Dichloroethene	OU3-BLDG103-AO01-0114	50%

### Sample Dilutions

The dilutions noted on the form ones for all samples were due to a canister pressurization step performed by the laboratory at the time of receipt which dilutes the sample, and results in an increase in the base reporting limits.

The dilutions performed on the samples noted below were required due to the presence of high target and/or non-target analyte concentrations which resulted in elevated reporting limits:

OU3-BLDG101C-GS03-0114

OU3-BLDG103-GS03-0114

OU3-BLDG101C-GS01-0114

OU3-BLDG101C-GS02-0114

OU3-BLDG101C-GS04-0114

OU3-BLDG101C-GS05-0114

OU3-BLDG103-GS02-0114

OU3-BLDG103-GS01-0114

OU3-BLDG103-GS01P-0114

OU3-BLDG103-GS10-0114

OU3-BLDG103-GS11-0114

OU3-BLDG103-GS12-0114

OU3-BLDG103-GS15-0114

OU3-BLDG103-GS15P-0114

ADHESIVE

### Rejected Data

No data were rejected based upon the validation process for this sampling event.

**Indoor Air Industrial Cancer Risk 10-4**

All samples collected and analyzed for VOCs in air analyses were less than the industrial cancer risk = 10-4 criteria.

**Indoor Air Detects Above Industrial Cancer Risk = 10-6**

All samples collected and analyzed for VOCs in air analyses were less than the industrial cancer risk = 10-6 criteria except as noted below:

Analyte (VOC List)	Affected Sample	Sample Results (ug/m3)	Industrial Cancer Risk = 10-6 (ug/m3)
Trichloroethene	OU3-BLDG103-A109-0114	3.25	3.0

**Indoor Air Industrial Non Cancer Hazard Quotient = 1.0**

All samples collected and analyzed for VOCs in air analyses were less than industrial non-cancer hazard quotient = 1.0 criteria.

**Soil Gas Industrial Cancer Risk = 10-4**

All samples collected and analyzed for VOCs in air analyses were less than industrial cancer risk = 10-4

**Soil Gas Detects Above Industrial Cancer Risk = 10-6**

All samples collected and analyzed for VOCs in air analyses were less than industrial cancer risk = 10-6 criteria except as noted below:

Analyte (VOC List)	Affected Sample	Sample Results (ug/m3)	Industrial Cancer Risk = 10-6 (ug/m3)
Trichloroethene	OU3-BLDG101C-G504-0114	6700	3000
Trichloroethene	OU3-BLDG103-G510-0114	3400	3000
Trichloroethene	OU3-BLDG103-G511-0114	5300	3000
Trichloroethene	OU3-BLDG103-G512-0114	17000	3000
Tetrachloroethene	OU3-BLDG103-G512-0114	75000	47000

### Soil Gas Detects Above Industrial Non Cancer Hazard Quotient = 1.0

All samples collected and analyzed for VOCs in air analyses were less than industrial non-cancer hazard quotient = 1.0 criteria except as noted below:

Analyte (VOC List)	Affected Sample	Sample Results (ug/m3)	Industrial NonCancer Hazard Quotient = 1.0 (ug/m3)
Trichloroethene	OU3-BLDG103-GS12-0114	17000	8800

### Data Usability

A review of the analytical data submitted regarding the investigation of NAS Jacksonville OU3 Phase III Vapor Intrusion Investigation 2014 by CH2M HILL has been completed. An overall evaluation of the data indicates that the sample handling, shipment, and analytical procedures have been adequately completed, and that the analytical results should be considered usable as qualified.

The data user can use the data recognizing the potential data biases indicated by the data qualifiers assigned to some results. Data was qualified for a subset of results based on field and/or laboratory duplicate imprecision biases.

541-73-1	1,3-Dichlorobenzene	1.7	2.0	1.7	0.60	U
106-46-7	1,4-Dichlorobenzene	1.7	2.0	1.7	0.56	U
95-50-1	1,2-Dichlorobenzene	1.7	2.0	1.7	0.60	U
5989-27-5	d-Limonene	2.8	2.0	1.7	0.56	U
96-12-8	1,2-Dibromo-3-chloropropane	1.7	2.0	1.7	0.39	U
120-82-1	1,2,4-Trichlorobenzene	1.7	2.0	1.7	0.64	U
91-20-3	Naphthalene	1.6	2.0	1.6	0.72	U
87-68-3	Hexachlorobutadiene	1.7	2.0	1.7	0.56	U

U = Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.  
 LOQ = Limit of Quantitation - The minimum quantity of a target analyte that can be confidently determined by the referenced method.  
 D = The reported result is from a dilution.

C - X

**Sample Collection**

Beacon Environmental provided CH2M Hill with thermally conditioned stainless steel tubes packed with Chromosorb-106 and Unicarb (a Sphero carb equivalent adsorbent) to target a custom compound list, with analyses following U.S. EPA Method TO-17. Both types of packed tubes were deployed at each location to collect a single sample. These passive diffusion samples (PDS) were exposed to air for 14 days (i.e., from 21,265 to 21,480 minutes) and the resulting mass of target analytes captured on each sampler was reported as a concentration following procedures detailed in ISO 16017-2, *Indoor, ambient and workplace air-Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography-Part 2: Diffusive sampling*. Note that there are no published uptakes rates for cis-1,2-DCE or trans-1,2-DCE; however, an adsorbent type with demonstrated efficiency for similar chlorinated compounds was used for this project along with an uptake rate that is published for similar compounds.

**U. S. EPA Method TO-17**

All samples were analyzed for a custom target compound list following U.S. EPA Method TO-17. The Chromosorb 106 and Unicarb tubes are desorbed sequentially onto the cold trap and injected into the GC, with results from both tubes combined to provide a single analytical result for each sample location.

The analytical results are reported in **Table 1**, which provides analytical results reported in  $\mu\text{g}/\text{m}^3$  based on the measured mass, dilution factor, the sampling time, and the uptake rates (Vinyl chloride=0.78 mL/min; trans-1,2-Dichloroethene=0.63 mL/min; cis-1,2-Dichloroethene=0.63 mL/min; Trichloroethene=0.47 mL/min; Tetrachloroethene=0.46 mL/min), using the following equation:

$$C = \frac{1000 \times M \times d}{U \times t}$$

where:

C	=	concentration ( $\mu\text{g}/\text{m}^3$ )
M	=	mass (ng)
d	=	dilution factor
U	=	uptake rate (ml/min)
t	=	time (min)

**Practical Quantification Levels (PQL) for EPA Method TO-17**

The lowest point in the calibration curve and the limit of quantitation (LOQ) is 10 nanograms (ng); however, when reporting concentration data in **Table 1**, the values are provided in micrograms per meter cubed ( $\mu\text{g}/\text{m}^3$ ) and the LOQs are additionally based on the sample collection times, the uptake rates, and the dilution factors. A summary of the LOQ, limit of detection (LOD), and method detection limit (MDL) for each compound is provided below:

Compound	LOQ (nanograms)	LOD (nanograms)	MDL (nanograms)
Vinyl chloride	10	5	0.7
trans-1,2-Dichloroethene	10	5	0.7
cis-1,2-Dichloroethene	10	5	0.9
Trichloroethene	10	5	1.0
Tetrachloroethene	10	5	1.4

**Calibration Verification**

The continuing calibration verification (CCV) values for the analytes were all within  $\pm 20\%$  of the true values as defined by the initial five-point calibration and met the requirements specified in Beacon Environmental's Quality Manual.

**Internal Standards and Surrogates**

Internal standards and surrogates are spiked at 100 ng and 50 ng, respectively, and percentage of recovery is calculated. Acceptance criteria for internal standards are 60 to 140 percent and surrogate recoveries are 70 to 130 percent; all internal standards and surrogates were within the acceptance criteria.

**Blank Contamination**

No targeted compounds above the method detection limit (MDL) for each compound were observed in the Laboratory Method Blanks (mb140207c1, mb140210c1, and mb140211c1). For comparison to field sample results, the longest sampling time (21,480 minutes) was used to calculate the LOQs for the blanks.

### **Laboratory Control Samples**

Laboratory control samples are spiked at 50 ng and percentage of recovery is calculated and reported. Acceptance criteria for surrogate and analytes recoveries are 70 to 130 percent; all surrogates and analytes were within the acceptance criteria.

### **Discussion**

Nineteen (19) passive indoor/ambient air samples were received by Beacon Environmental on February 6, 2014. Individual deployment and retrieval times will be found in the Chain of Custody (**Attachment 1**). Analyses of these samples were completed on February 11, 2014.

Dilutions were required for two (2) samples (OU3-BLDG101-A102-0114 and OU3-BLDG101-A102P-0114), which had measurements that exceeded the calibration range for trans-1,2-dichloroethene. Dilutions were performed for these samples to bring the detected concentrations of these analytes into the calibration range of the GC/MSD instrument. Both samples were diluted once with a dilution factor of six (6). The LOQs of these diluted samples are higher, which are noted in **Table 1**. The Chromosorb 106 tubes were not analyzed in the dilution runs, as trichloroethene and tetrachloroethene results in the initial analyses did not exceed the calibration range. Results for these two analytes in the diluted sample analyses are shown as NT (not targeted) in **Table 1**. Results for both the initial and the dilution runs are provided in **Table 1**, with the original analyses performed on February 7, 2014, and the dilution analyses on February 11, 2014.

During the analysis of sample OU3-BLDG101-AI03-0114, an equipment failure caused the Unicarb tube desorption of the original sample analysis to fail, which resulted in the original analysis falling outside the twelve (12) hour tune window. The recollected portion of this sample was subsequently analyzed along with the Chromosorb 106 tube and reported as one analysis. The recollected portion of this sample results in a dilution factor of six (6) for those compounds targeted with Unicarb (*i.e.*, vinyl chloride; trans-1,2-dichloroethene; and cis-1,2-dichloroethene).

### **Demonstrated Linear Range of the GC-MS Instrumentation (EPA Method TO-17)**

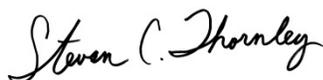

An initial five-point calibration is performed on the instrumentation from 10 to 200 ng per analyte.

### **Attachments:**

**Title:** Laboratory Director

Results in micrograms per meter cubed ( $\mu\text{g}/\text{m}^3$ ).

B=Detected in method blank and any associated samples.

DL =Used for all compounds identified in an analysis at a secondary dilution factor. DL is used only for the samples reported at more than one dilution factor.

E=The value reported for an analyte exceeds the linear calibration range for that analyte.

J=Values below limit of quantitation (LOQ) but above method detection limit (MDL).

NT=Not targeted.

U=Analysis included an analyte, but it was not detected, or detected below it's MDL.

CH2M Hill Project No.: 470875

Note: Equipment failure caused Unicarb portion of original sample analysis to fail, falling outside the 12 hour tune window. Recollected portion is re-analyzed here. No vinyl chloride or cis-1,2-Dichloroethene were seen on the original sample.

Sample ID: **OU3-BLDG101-AI03-0114**  
Project Number: 2796  
Lab File ID: C14021005  
Received Date: 2/6/14  
Analysis Date: 2/10/14  
Analysis Time: 11:25 AM  
Matrix: Air

COMPOUNDS	Results	Units	Completed	LOQ

**Subject:** RE: Sample Receipt for NAS, Jacksonville

Hi Patti,

I wanted to point out that the TAT on the COC is incorrect for SDG – 2796. It should be a 28 day TAT and not 14 day TAT. Please let me know if it's too late to change this now.

Also, can you please add a "-A" to the end of the following sample IDs:

--OU3-BLDG103-AI03-0114-A  
--OU3-BLDG103-AI03P-0114-A  
--OU3-BLDG103-AI09-0114-A  
--OU3-BLDG103-AO01-0114-A

Sorry for the trouble.

Thanks,  
Bethany

**Subject:** Sample Receipt for NAS, Jacksonville

Bethany,

Beacon received the samples for the Phase II Vapor Intrusion Investigation, Operable Unit 3 Naval Air Station (NAS), Jacksonville today, February 6, 2014. The samples arrived in good condition, will be analyzed by USEPA Method TO-17, and the results and report will be issued to CH2M Hill on or before February 20, 2014 (14 calendar days as noted on the chain of custody). A pdf of the chain of custody is attached, as is the sample acceptance letter and ELD.

**Subject:** RE: bottle order for JM-10 / NAS-JAX Vapor Intrusion air sampling

Hi Harry,

The contract was set up for a 28 day TAT and unfortunately I didn't double check this when I submitted the bottle order and Kimberly didn't realize this when she submitted the COC. All the other work under this project is for 14 days and it looks like we didn't remember that you guys were for 28 days. If we are too late to change the TAT, then we really can't do much about it. I just wanted to see. Based on your email, it looks like we are too late to make the TAT per the contract.

Thanks,  
Bethany

Bethany,

In response to your email today concerning TAT, we have been working to deliver the results in 14 days as noted in your request below from Jan. 10 and as was noted on the chain of custodies received with the samples. What changed and when?

Please double check the deliverable requirement.

Thank you,  
Harry

Hi Harry,

We will be collecting air samples for JM-10 / SBRAC 2 NAS-JAX the week of January 20<sup>th</sup>, 2014. Please send the below bottle order for delivery on **Friday, 1/17/14**. The bottle order is as follows:

**17 samples (+ 2 duplicates) for:**

Select VOCs – TO-17

\*Select VOCs = cis-1,2-DCE; trans-1,2-DCE; PCE, TCE; and VC  
(level C package / 14-day TAT final package)

Please send labels, custody seals, and shipping instructions for direct shipment to Beacon to the below address.

## Sample Delivery Group Case Narrative

### Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. Samples were subcontracted to ALS Environmental for Volatile Organic Compounds by EPA TO-15.

### Changes to the Revision

This is an original submittal of the final report package.

### Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, Ms. Marcia K. McGinnity or an approved technical designee is authorized to sign this Statement of Data Authenticity.

## LABORATORY REPORT

February 12, 2014

Sonya Gordon  
Empirical Labs  
621 Mainstream Drive Suite 270  
Nashville, TN 37228

**RE: OU3 - NAS Jacksonville / 470875.04.04.02.06**

Dear Sonya:

Enclosed are the results of the samples submitted to our laboratory on January 29, 2014. For your reference, these analyses have been assigned our service request number P1400358.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Respectfully submitted,

**ALS | Environmental**

Service Request No: P1400358

---

## CASE NARRATIVE

The samples were received intact under chain of custody on January 29, 2014 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the samples at the time of sample receipt.

### Volatile Organic Compound Analysis

Fifteen of the samples were analyzed in Scan mode and four in SIM mode for selected volatile organic compounds in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. This procedure is described in laboratory SOP VOA-TO15. The analytical system was comprised of a gas chromatograph / mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator. This method is not included on the laboratory's AIHA-LAP scope of accreditation. Any analytes flagged with an X are not included on the laboratory's NELAP or DoD-ELAP scope of accreditation.

The Relative Percent Difference (RPD) for cis-1,2-Dichloroethene in sample OU3-BLDG103-AO01-0114 (P1400358-004 DUP) was outside control criteria. However, precision for these compounds was exhibited by the analysis of a Laboratory Control Sample (LCS) and Duplicate Laboratory Control Sample (DLCS). No further corrective action was required.

The Summa canisters were cleaned, prior to sampling, down to the method reporting limit (MRL) reported for this project. Please note, projects which require reporting below the MRL could have results between the MRL and method detection limit (MDL) that are biased high.

---

*The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.*

*Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.*

**ALS Environmental  
Sample Acceptance Check Form**

Client: Empirical Labs

Work order: P1400358

Project: OU3 - NAS Jacksonville / 470875.04.04.02.06

Sample(s) received on: 1/29/14

Date opened: 1/29/14

by: RMARTENIES

**Note:** This form is used for all samples received by ALS. The use of this form for custody seals is strictly meant to indicate presence/absence and not as an indication of compliance or nonconformity. Thermal preservation and pH will only be evaluated either at the request of the client and/or as required by the method/SOP.

- |  | <b>Yes</b>                          | <b>No</b>                           | <b>N/A</b>                          |
|--|-------------------------------------|-------------------------------------|-------------------------------------|
| 1 Were <b>sample containers</b> properly marked with client sample ID?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| 2 Container(s) <b>supplied by ALS</b> ?  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| 3 Did <b>sample containers</b> arrive in good condition?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| 4 Were <b>chain-of-custody</b> papers used and filled out?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| 5 Did <b>sample container labels</b> and/or tags agree with custody papers?                                      | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
