Re: Free Product Removal Treatability Study Report for The Trumbo Point Bachelor Officer Quarters, Building C-2076, Navy, Naval Air Station Key West, Florida

Dear Ms. Washington:

The Florida Department of Environmental Protection (The Department) has completed the technical review of the above referenced document dated September, 2010 (received October 26, 2010). The Department concurs with the recommendation to continue with implementing the PIG Monitoring Well Skimming Sock for the selective free product extraction at the recovery well until the free product is no longer present at this site. It is not clear from this or the previous report what the total initial volume of product was, given that there were at least two spill events, but the consistent asymptotic drop in recoverable product over time suggests that introducing a new technology at this point may not be productive. If I can be of any further assistance with this matter, please contact me at (850) 245-8998.

Sincerely

Tracie Lynn Bolanos
Remedial Project Manager
Federal Programs Section
Bureau of Waste Cleanup
