CTO: 0045

DATE: December 18, 2006

Introduction

Purpose and Objectives of the Technical Memorandum

CH2M HILL Constructors, Inc. (CH2M HILL) has been contracted by the U.S. Naval Facilities Engineering Command, Southeast (NAVFAC SE), to characterize and eliminate potential exposures to two contaminants of concern (COCs), polychlorinated biphenyls (PCBs) and lead, in soil at the former Defense Reutilization and Marketing Office (DRMO) site, Truman Annex, located at the Naval Air Station (NAS) Key West in Key West, Florida. This work is being performed under Response Action Contract No. N62467-01-D-0331, Contract Task Order (CTO) No. 0045.

The purpose of this Technical Memorandum (TM) is to report the results of the investigation completed in the fall of 2006 per the approved Sampling and Analysis Plan (SAP) (CH2M HILL, 2006). This TM also includes recommendations for the removal actions based on the results of the investigation. The areas identified for removal action are presented in the figures attached to this TM.

This TM accomplishes the following objectives, based on the sampling and analysis completed at the former DRMO facility:

- Identify the extent of PCBs and lead distribution in soil over the entire area of the DRMO per the approved SAP.
- Identify areas that could potentially represent unacceptable exposures to human receptors from PCBs and lead in site soil at concentrations above health-based protective target levels. The target levels are defined in the approved SAP as the Florida Department of Environmental Protection (FDEP) Soil Cleanup Target Levels (SCTLs), Residential Exposure, per Chapter 62-777, Florida Administrative Code (FAC), Table 2. The exposure unit used for this investigation is a ¼-acre contiguous area (measuring 100 feet by 100 feet) identified as a “grid”. The statistical upper-bound estimate on average

was used for comparison against the target levels to determine areas for corrective action for PCBs. The average concentration for lead was compared against the target levels for corrective action recommendations for lead.

- Identify areas needing corrective actions to eliminate potential human exposure related risks. Because the site is located within a developed area, no quantitative target levels have been developed for the ecological end-points for PCBs and lead.
- Provide information to prevent the potential for residual soil contamination to leach to groundwater under current and potential future land use conditions. The target levels for leachability protection are also selected from FDEP SCTLs per Chapter 62-777, FAC, Table 2 (see Table 4.1 in Section 4.0). The Synthetic Precipitation Leaching Procedure (SPLP) results are compared against Groundwater Cleanup Target Levels (GCTLs) from Chapter 62-777, FAC, Table 1 (the values selected are those listed for low yield aquifers).
- Provide information to eliminate potential “hot spot” areas that are greater than three times the residential SCTL value.

The contaminated soil requires removal since the City of Key West plans to develop the site as a *mixed use* site where the public could access the site for recreational use. The sampling conducted per the approved SAP defined the extent of contamination in site soil for PCBs and lead, as these two chemicals were identified as the COCs at the site.

The proposed contamination removal areas were based on the most protective target levels assuming residential land use, thus allowing maximum flexibility in future land use for the site. The most likely future land use for this site will be “Natural and Recreation Corridor” or residential area. Therefore, the entire DRMO area will be remediated to meet residential land use-based target levels defined above.

Contents of This TM

This TM includes sections on site history, field work conducted and any deviation from the approved SAP, analytical data and validation, and data evaluation and identification of areas exceeding the target levels. The target levels are protective against direct human exposure using FDEP SCTL values and indirect exposure through evaluating leachability to groundwater.

This TM also includes a discussion of the proposed removal areas based on CH2M HILL’s sampling effort, existing site utilities for consideration during removal actions, and a summary of recommendations section. Several figures and tables are provided to graphically present and summarize the results of the sampling effort.

Summary of Site History and Current Conditions

History of Contamination

The former DRMO site is located on Truman Annex in Key West, Florida (see Figure 1). The former DRMO site is approximately 6.25 acres in area and was formerly used as a storage facility for new and used military equipment. Over time, contaminants were released to site soils. An elevated water storage tank was formerly located at the site and was removed

within the past two years. This elevated tank was historically painted with lead-based paints. When the tank was demolished, lead from chipped paint was released to the surrounding soil. During a subsequent lead soil assessment and remediation project, lead soil disposal characterization identified PCBs as an additional COC for remediation in soil at the site. Further delineation of the extent of PCB and lead-contaminated soil at the site was conducted per the approved SAP (CH2M HILL, 2006).

Past Investigations and Decisions

The DRMO area had been previously investigated by TetraTech NUS, Inc. (TTNUS). The TTNUS investigation proposed numerous areas for a removal action. This technical memorandum does not evaluate those historical data nor the decisions previously made.

There are five areas identified in the Truman Annex Quitclaim Deed, termed engineering controls (ECs), which may require soil removal action. If determined by the Navy, these selected areas will be excavated to two feet below ground surface (bgs) to remove the continued requirement to maintain the ECs and to meet residential land use standards.

In addition, there are three surface soil "hot spots" around the former water storage tank area that will require removal based on a previous agreement by the Navy, City, and FDEP. These three "hot spot" areas will be excavated to two feet bgs as part of the proposed removal action to meet the residential land use standards.

Currently, the DRMO is vacant with no military or public activity. There is a fence around most of the DRMO facility boundary, which is shown on the figures.

Field Activities Sampling Efforts

On August 26, 2006, CH2M HILL and TBE Group, Fort Lauderdale, Florida were on site to survey the site boundary perimeters and corners of the proposed 26 ¼-acre grids as specified in the SAP (CH2M HILL, 2006). On September 5, 2006, Zebra Environmental Services, Tampa, Florida (the direct push subcontractor) and CH2M HILL sampling personnel mobilized to the DRMO site. The initial round of soil sampling commenced on September 6, 2006 and continued through September 21, 2006. The proposed 26 grids were assigned alphabetical identifiers ranging from A through Z. Each of the grids was divided into sub-grids. The sub-grids were assigned a two character identifier consisting of the grid identifier and a numeral (i.e., A1, A2, etc.). A sample location was positioned at the center of each sub-grid. The sub-grid identifier was used to refer to each sample location.

Grids were sampled in an orderly manner based on historical sample results, i.e., grids that had previously exhibited lower concentrations were sampled prior to grids that had previously exhibited higher concentrations. Two samples were collected at each of the sample locations at depth intervals of 0 to 6 inches bgs and 6 to 24 inches bgs utilizing direct-push technology. Each sample was collected in a separate sample liner to facilitate discrete-interval sample collection. Each sample was removed from the sample liner and transferred to a stainless-steel bowl and homogenized using a stainless-steel spoon. The sample was then transferred to a labeled 4-ounce glass jar and placed on ice in a cooler. A total of 478 soil samples were collected with the required quality control samples. Samples were collected in accordance with the approved SAP (CH2M HILL, 2006). The samples were

submitted to PEL Laboratories, Tampa, Florida, for total PCBs analysis by USEPA Method 8082 and total lead analysis by USEPA Method 6010B.

Once the locations were sampled, the final sample locations were surveyed with a handheld Trimble Pro-XR GPS unit. Therefore, any proposed sample positions that required off-sets (i.e., due to underground utilities) were updated with the re-surveyed locations.

Based on the analytical results from the initial round of soil sampling, CH2M HILL personnel conducted additional sampling for SPLP analyses on November 6, 2006. The top five highest concentration locations were sampled for PCBs and lead analyses by SPLP method. In addition, when preliminary results from the initial five samples indicated SPLP criteria exceedance, then additional sample locations and depths from the same locations were collected for SPLP analyses. This resulted in several additional samples for SPLP analyses for PCBs and lead. Sample locations E1, E2, E3, X9, X10, Y3, and Z5 were analyzed for PCBs by SPLP method. For some of these locations, samples were collected at multiple depths as listed in Attachment A2. Samples locations K4, X1, X3, X9, X10, Z5, and Z11 were analyzed for lead by SPLP method and the data is included in Attachment A2.

Sample Grids

The site was divided into 26 ¼-acre grids, labeled A-Z. Grids were designated to be surveyed to a dimension of 100 feet by 100 feet. The grids were proposed to consist of ten sub-grids with a sample location positioned in each sub-grid at even distances to result in approximately 20 samples. However, a number of designated grids could not accommodate ten sub-grids due to the grid dimensions being altered by the orientation of the site boundaries. The perimeter grids affected by the site perimeter boundaries were B, C, I, K, R, S, T, U, V, Y and Z. Grids B, S, T and U contained less than ten sub-grids due to being bisected by the site fence. Grids I, R, Y and Z contained more than ten sub-grid sample locations due to the grid dimensions having to deviate from the proposed 100-foot by 100-foot dimension. Grids A and J were completely excluded from sampling due to positioning in a "secure" area. Figure 2 provides the sample locations within the grids. Sample locations within the sub-grids were positioned using a 100-foot measuring tape and measuring from the grid corner stakes provided by the surveyors (TBE Group). The sample locations were marked with pin flags and marker paint.

Rationale and Deviations from Approved SAP

The SAP indicated that every alternate sample from 0 to 6 inches bgs and from 6 to 24 inches bgs, and from every other location within the grid would be analyzed for PCBs and lead. The field team would designate on the chain-of-custody those remaining grid samples to be placed "on-hold" by the laboratory. The "on-hold" sample analyses would remain "on-hold" pending the results of the adjacent samples that were submitted for analyses.

During the sampling and analysis effort, some of the samples were analyzed rather than being placed "on-hold", and some of the samples were placed "on-hold" that should have been analyzed. This discrepancy affected only a few grids. Consequently, the initial round of results from some of the grids may have been biased to the 0 to 6 inches bgs interval or the 6 to 24 inches bgs interval. As a corrective action, more than 10 total samples were analyzed per grid. The samples adjacent to another 0 to 6 inches sample were taken off hold

and analyzed. This resulted in more analyses per grid for some of the grids compared to the number of 10 per grid that was outlined in the approved SAP. The Quality Assurance/Quality Control Auditor was notified. Once the results were received and evaluated, samples from grids that exhibited insufficient data due to the field oversight were taken “off-hold” (if within holding time) and analyzed for total PCBs and/or total lead to provide sufficient data for evaluation.

Analytical Data Quality Evaluation

Attachment A provides the analytical data collected as part of this investigation. PEL Laboratories performed an internal validation of all analytical data prior to submitting the laboratory data packages to CH2M HILL. Ten percent of the data packages received from PEL were submitted for independent data validation by Environmental Data Professional, LLC (eDATApro). Attachment B provides the eDATApro validation reports for this sampling event.

Samples submitted to PEL were analyzed for PCBs by EPA SW-846 Method 8082 and lead by EPA SW-846 Method 7421 and 6010B. Samples with the highest concentrations of PCBs and lead were also analyzed for SPLP lead and PCBs. Due to laboratory problems with the Inductively Coupled Plasma (ICP) instrument, several samples were analyzed by EPA SW-846 Method 7421 by graphite furnace atomic absorption (GFAA).

The project-required method detection limit (MDL) for lead was 400 milligrams per kilogram (mg/kg); therefore, all samples were diluted prior to analysis. This dilution resulted in zero percent recoveries for the matrix spike/matrix spike duplicate (MS/MSD) due to spike levels at the elevated reporting limit (RL). Post spike recoveries were within criteria; therefore, no results were qualified.

Lead was reported between the laboratory MDL and the RL in one instrument calibration blank during the analysis of SPLP lead samples. Positive results associated with this blank were “B/MB” qualified to indicate the presence of lead in the laboratory blank.

The PCB, Aroclor 1260, result for one sample, 45-L3-(0-0.5)-090606, was “J” qualified as estimated during the validation process due to matrix interferences which caused high decachlorobiphenyl surrogate recovery. MS/MSD relative percent difference (RPD) was reported outside the acceptable range for PCB for one sample, 45-L3-(0-0.5)-090606. However, the laboratory control sample results were within criteria and no qualifying flags were applied.

Elevated quantitation limits for SPLP PCBs were reported for sample 45-X9(0.5-2)-091906. The laboratory noted a heavy emulsion for this sample during the original extraction; therefore, the sample was extracted using a 470 mL sample volume to a final volume of 10 mL yielding elevated reporting limits.

Two samples, 45-B10 (0.5-2)-090606FD and 45-K1 (0.5-2)-090606FD, were submitted for blind field duplicate analysis. The native sample for 45-K1 (0.5-2)-090606FD was placed on hold and not analyzed; therefore, accuracy and precision data was not available for this sample. Field duplicate precision criteria for sample 45-B10 (0.5-2)-090606FD were met for all parameters.

Overall, the conclusion was that the analyses performed were acceptable and the data may be used in the project decision-making process as qualified.

Site Data Evaluation and Grid-Specific Recommendations

As previously discussed, the DRMO site was sampled using sampling grids identified to represent ¼-acre size across the entire area. The samples collected from each ¼-acre grid were included for estimation of a grid-wide upper confidence limit of 95% (95%UCL) concentration on the mean using the FDEP UCL calculation tool for PCBs (see Attachment C), whereas lead was evaluated using the arithmetic mean concentration across each grid. The resulting concentration was compared against the target remediation goal described below. Additionally, the data were evaluated for the presence of ‘hot spot’ areas of contamination, when site-wide statistical averages were within the target levels as well as for the leachability potential. The “hot spots” are the areas with concentrations above three times the residential target levels. The results of these data evaluations were used to develop the proposed removal action for each grid, as presented in this section.

The PCBs analysis included analysis for various PCB mixtures as presented in Attachment A. As can be noted from the results, only Aroclor-1260 was detected in some of the samples, and none of the other Aroclors were detected in any of the samples. Therefore, the discussions and figures presented herein represent Aroclor-1260. Figures 3 through 8 present the individual sample points collected for PCB and lead analysis, and the sample-specific concentration distribution in each grid.

Remedial Goals

The remedial goals used for the remedial decisions presented in this technical memorandum were previously identified in the approved SAP (CH2M HILL, 2006). The soil remedial goals are used for delineation of soil PCB and lead contamination at concentrations above FDEP SCTLs (Chapter 62-777, FAC, Table 2). The soil concentration levels were determined both horizontally and vertically, up to two feet bgs for direct exposure and to the water table for leachability. The proposed removal decisions were based on unrestricted future land use per the target remedial goals listed in Table 1. Though both industrial land use-based and residential land use-based target levels are listed, only residential land use-based criteria were used for removal decisions identified in this memorandum. The residential land use-based target levels were used so that the site soil concentration will be protective of both types of future users of the site, with the residential land use-based target levels being generally more conservatively protective of human health.

Per FDEP, a “hot spot” is defined as an area of contamination that is three times or greater than the SCTL value. Therefore, any soil with concentrations three times or above the residential SCTL for lead and/or PCBs requires removal up to 24 inches bgs to eliminate potential hot spots of contamination in soil. Several of these areas are identified below.

Remediation Approach

The Residential SCTLs will be met on an area-wide basis across an exposure unit, and not at every sample location, following the FDEP recommended standard risk-based approach described in the technical guidance for Chapter 62-777, FAC. Per this FDEP guidance, an

exposure unit for this site is a ¼-acre residential lot. A statistically-based approach of estimating grid-wide concentrations was used to determine the concentrations above which soil will be removed to achieve the ¼-acre exposure unit-wide averages. As previously stated, these grid-wide average concentrations were used for lead data evaluations whereas a UCL set at 95% or greater was used for PCB evaluations. The UCL value was estimated using the FDEP UCL tool. The FDEP guidance indicates that, in order to estimate the UCL levels, a minimum of 10 samples should be collected per ¼-acre area exposure unit. Samples causing the 95%UCL to exceed remediation levels were identified for removal during data review. Each grid is divided into sub-grids with lines drawn at mid-points between sample points for identification of remediation extent around a contaminated sample point. Soil around each sample identified by an exceedance will be removed to the mid-point between the contaminated sample point and the nearest clean sample. The sub-grids are identified in Figures 3 through 8.

Lead in surface soil will be remediated if the grid-wide average concentration exceeded the residential SCTL value of 400 mg/kg. However, if the grid-wide average concentration was below 400 mg/kg, but the individual sample concentration is above 1,200 mg/kg (i.e., 3×400 mg/kg), then it will be removed based on the “hot spot” analysis. If a grid average or the maximum level exceeds the remediation goal, then the highest concentrations detected in the grid will be removed until the remaining average/hot-spot concentrations in the grid are below the remediation goals. Table 2 presents a comparison of lead levels from each grid against remediation goals. Figure 4 presents all the detected lead concentrations. Figure 6 presents the areas with lead exceeding target levels.

PCBs concentrations that will remain in site soil will meet the FDEP SCTLs after the remediation is completed, by ensuring that the grid-wide 95% UCL on the mean concentration will be below the established target remedial goal of 0.5 mg/kg for residential land use. Additionally, individual location concentrations in each grid will be below the three times 1.5 mg/kg ($3 \times 0.5 = 1.5$ mg/kg) concentration based on the hot spot evaluation in each grid. If a grid-specific estimated UCL concentration or the maximum concentration in a grid exceeded the respective remediation goal, then the highest concentrations detected in the grid will be removed until the remaining 95% UCL/hot-spot concentrations in the grid are below the remediation goals. Table 3 presents a comparison of the site statistical averages against PCB remediation goals and the hot spot evaluations. Figure 3 presents the samples where Aroclor-1260 was detected. Figure 5 presents the Aroclor-1260 locations exceeding target levels.

Leachability Evaluation - Both lead and PCB concentrations in soil were compared against leachability-based SCTL values listed in Table 1. The results of this comparison are included in Table 4. Areas exceeding the leachability-based SCTL values and other additional highest concentration areas were sampled for SPLP analysis to determine leachable fraction from the soil total PCB and total lead concentrations. The results of the SPLP analysis were compared against the GCTLs for low-yield aquifers (i.e., $10 \times$ GCTL because shallow groundwater at the site is a perched aquifer) to identify remedial action areas as described below. When shallow soil indicated the presence of leachable fractions above GCTLs, the next deeper depth was also sampled for SPLP analysis. The results of the SPLP analyses are discussed below.

Grid-wide Statistical Average Estimation for Risk-Based Remediation

The basis for determining the extent of soil removal followed the decision logic described below. PCB removal areas were identified based on 95% UCL exceedance above SCTL and “hot spot” (1.5 mg/kg) criteria exceedances. No leachability potential based removals were identified for PCBs. Lead removal action is based on grid-wide average concentration exceedances, “hot spot” target level exceedances (1,200 mg/kg), and leachability potential indications.

PCBs-Remediation Areas

PCB data from all samples within a grid were used to estimate the 95% UCL values on the mean using the FDEP UCL Calculator, Version 0.97. A minimum of 10 samples were collected from each grid. As can be noted from Table 3, most grids had 10 to 18 samples per grid, with the exception of Grids B and T, which had 8 and 7 samples, respectively. However, Grid B did not have any detectable PCBs in any of the samples and the total area within the grid is slightly less than ¼-acre. Additionally, Grid T, which is also smaller than ¼-acre, had PCBs reported near detection limits, but none of the PCB detections exceeded the criteria. Therefore, the maximum concentration was used to propose a removal action recommendation for Grid T. The 95% UCL calculation output sheets from the FDEP UCL Tool are included in Attachment C (C1 and C2) for pre- and post-removal calculations.

When the grid-specific 95% UCL estimates are below SCTLs, the specific grid was identified as “clean” and no further sampling or removal action was recommended for that grid. The grids identified with 95% UCL values above SCTLs for residential or leachability target levels, and the specific locations with elevated concentration that were contributing to exceedances of 95% UCL on the mean concentrations above the target levels, were identified for removal action. The residual concentrations that are expected to remain in the grid are included for a re-calculation of the 95% UCL concentration, as included in Table 6. The removal actions, when implemented at the sample locations identified in Table 6, will reduce the PCB levels to below target levels after removal of the contaminated soils from the high concentration areas, as indicated by the residual 95% UCLs being below the target levels.

Table 6 identifies the grids and the specific sample locations that resulted in 95% UCL estimates above target levels. The samples contributing to the exceedance are also identified in this table for removal. Grids D, E, F, G, O, P, Q, S, X, Y and Z grids require some level of removal. The specific locations requiring removal actions are identified in Table 6 and illustrated in Figure 8. The removals will extend around each sample point with excessive concentration to a mid-point to the nearest “clean” sample point.

The hot spot area evaluation for PCBs resulted in some of the same grids that were also identified for removal based on 95% UCL value exceedance. The removal actions identified based on 95% UCL exceedance will result in removing the hot spots as well. Thus, no specific hot spot removal actions for PCB contaminated areas were identified.

Lead Remediation Areas

Following the EPA guidance, the grid-specific arithmetic average concentration was estimated for lead using 10 or more samples collected from a grid (see Figure 4). The

estimated average concentration was compared against the lead SCTL value for residential land use of 400 mg/kg (see Table 2). The grid with average concentrations exceeding the target SCTL value was identified for removal actions. The highest detected concentrations were recommended for removal in grids where average concentrations exceeded 400 mg/kg. Table 2 includes grids identified for removal actions. Table 5 includes specific samples within a grid identified for removal actions. Grids X and Z require removal action based on the exceedance of the average concentration above the target concentration.

Lead Hot Spot Evaluation: Additionally, the highest detected concentrations in each grid were compared against three times the SCTL value, to identify any extremely high concentrations which are also referred to as 'hot spot' values, particularly in grids where average concentrations did not exceed the target levels (see Table 5). Only one grid, Grid K, had hot spot removal actions identified for the area around one sample location, K4. Although other areas exceed 1,200 mg/kg (criteria for hot spot removals, e.g., Grids X and Z), these grids also exceed the target levels based on the average concentrations. Following removal actions, no hot spots are expected to remain in any of the grids. Figure 7 includes the lead removal areas identified from Table 5.

SPLP Evaluation

Table 4 includes a screening comparison of PCB and lead maximum and grid-wide average concentrations against leachability SCTLs. The detected PCB and lead concentrations in soil samples were compared against the leachability based SCTL values. The maximum detected PCB concentrations in Grids E and X exceed the leachability SCTL values, whereas, Grids K, Y and Z are above 400 mg/kg (the screening level leachability SCTL value). Based on these exceedances, SPLP analyses were conducted at the highest total PCB and total lead detection locations. The detected concentrations from the SPLP analysis were compared against the groundwater criteria ((Chapter 62-777, FAC, Table 1). Because the shallow groundwater at the site is a perched water table with low yield, a GCTL value multiplied by 10 was used for comparison. Table 7 includes a comparison of SPLP values against GCTL values, and the conclusions based on the comparisons. The GCTL value of 5 ug/L was used for comparison to PCB results and 150 ug/L was used for lead. No PCB removal action is identified based on the leachability evaluation using the SPLP data, as presented in Table 7.

Lead was identified as requiring removal action based on the analytical results from SPLP analysis in the same locations as the total lead removals identified based on SCTL comparisons. These details are included in Table 7. Where the deepest sample (e.g., 0.5 to 2 feet depth) exceeded the GCTL value, removals will extend to the water table. Two locations, samples X9 and Z11, have GCTL exceedances in the deepest sample collected (0.5 to 2 feet bgs). Soil in these two locations will be removed up to the top of the groundwater table to ensure groundwater will not be impacted in the future by elevated levels of the contaminants. Additionally, the removal action implemented across the DRMO will eliminate all future sources for leachability, as all the highest concentration locations are identified for removal based on previous comparisons described above.

Two sample locations, S4 located at the southwest corner of the DRMO and sample Z11 located at the southeast corner of the DRMO, were collected along the boundary line to the DRMO. The full extent of contamination beyond these sample locations could not be determined due to the fence and inaccessibility beyond these points. Because both these

locations have above target levels for PCBs (Z11 and S4) and lead (S4), contamination could be present beyond the property boundary at the DRMO. Therefore, additional removal/confirmation sampling beyond the DRMO facility boundary may be warranted in these areas.

Removals to Eliminate Engineering Controls at DRMO

There are five areas identified in the Truman Annex Quitclaim Deed, termed engineering controls (ECs), which ~~may require~~ soil removal action. These selected areas will be excavated to two feet below ground surface (bgs) to remove the continued requirement to maintain the ECs and to meet residential land use standards. The COCs for these areas will be identified based on information to be provided by TTNUS prior to the removal action. Figure 8 shows the approximate location of the EC areas adjacent to the DRMO.

Removals in the Former Water Storage Tank Area

As mentioned earlier, there are three surface soil "hot spots" around the former water storage tank area that will require removal based on previous agreements between the Navy, City, and FDEP. These three "hot spot" areas will be remediated to two feet bgs as part of the DRMO removal action to meet the residential land use standards. The COCs for these areas include antimony, arsenic, chromium, copper, lead, and PCBs. Figure 8 shows the three "hot spot" areas around the former water storage tank area. Note that there is overlap between the "hot spot" around the former tank area and the areas identified for removal based on the recent sampling performed.

Utility Clearance Survey

Prior to sample collection activities, a site utility clearance survey was performed by TBE. A number of underground utilities were identified across the site which bisected a number of the sub-grids. The underground utilities identified were sanitary sewers, communication lines, water lines, electrical lines, and "historical piping". Where the underground utilities bisect the proposed sub-grid sample locations, the sample location was off-set at least three feet. No underground utilities were encountered during the direct-push probing sampling effort. Figure 9 provides the location of the utilities relative to sample locations.

Summary of Recommendations

The specific grids and sample locations that require soil removal based on the risk-based corrective action guidance from FDEP, as outlined in the approved SAP, are provided on Tables 5, 6, and 7. Figure 8 identifies all the removal areas based on the risk-based evaluation of the data presented in this memorandum. Additionally, areas previously identified as potentially requiring removal action include the EC areas. The three "hot spot" areas around the former water storage tank area will also be removed. Two locations, one in the southeast corner and one in the southwest corner, may require removal actions beyond the DRMO boundary due to the presence of PCBs and lead in samples (S4 and Z11) at the fence line.

Based on these results, the estimated volume of soil proposed for removal based on the risk-based evaluation of the data is approximately 2,800 bank cubic yards (BCY). The volume of soil removal for the five EC areas is approximately 100 BCY. The estimated volume of soil removal for the three surface soil "hot spot" areas around the former water storage tank is approximately 200 BCY. The area and volume calculations of the various removal areas are summarized in Table 8.

Following acceptance of the proposed soil removal action outlined in this memorandum, a detailed work plan for the removal action will be prepared by CH2M HILL and presented to the Navy for approval. CH2M HILL is currently anticipating the removal action to begin on January 29, 2007.

Table 7: Soil leachability Evaluation and SPLP Data Summary by Grid

SampleID	Units	Analyte	Conc.	Qual	GCTLs	Exceeded?	Comment
SPLP Analytical Results for Aroclor 1260*							
45-E1(0-0.5)-091406	UG/L	Aroclor-1260	0.51	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-E2(0.5-2)-091406	UG/L	Aroclor-1260	0.52	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-E3(0.5-2)-091406	UG/L	Aroclor-1260	0.51	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-X9(0.5-2)-091906	UG/L	Aroclor-1260	1.1	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-Y3(0.5-2)-092006	UG/L	Aroclor-1260	0.52	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-E2A(0-0.5)-110706	UG/L	Aroclor-1260	2	=	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-E3A(0-0.5)-110806	UG/L	Aroclor-1260	2.2	=	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-X10A(0-0.5)-110806	UG/L	Aroclor-1260	0.53	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-X9A(0-0.5)-110706	UG/L	Aroclor-1260	0.5	U	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
45-Z5A(0-0.5)-110906	UG/L	Aroclor-1260	1.3	=	5	No	No GCTL exceedence. PCBs will be removed due to SCTL exceedence
SPLP Analytical Results for Lead							
45-K4(0.5-2)-090606	MG/L	Lead	0.0344		0.15	No	Lead will be removed due to SCTL exceedence
45-X1(0-0.5)-091906	MG/L	Lead	19.6		0.15	Yes	Lead will be removed to 2ft below surface due to SCTL and GCTL exceedence. Deeper sample (listed below) is clean, therefore no additional actions needed.
45-X1(0.5-2)-091906	MG/L	Lead	0.0141		0.15	No	No action
45-X3(0-0.5)-091906	MG/L	Lead	0.271		0.15	Yes	Lead will be removed to 2 ft below surface due to SCTL and GCTL exceedence. Deeper soils are below criteria for lead.
45-X9(0.5-2)-091906	MG/L	Lead	0.117		0.15	Yes	Lead will be removed to from 0 to water table (~6 ft bgs) to eliminate potential source for leaching since there are no sample data below 2 ft at this location.
45-X10(0-0.5)-091906	MG/L	Lead	0.081		0.15	No	Lead will be removed to 2 ft below surface due to SCTL and GCTL exceedence. Deeper soils are below criteria for lead.
45-Z5(0-0.5)-092106	MG/L	Lead	0.647		0.15	Yes	Lead will be removed to 2 ft below surface due to SCTL and GCTL exceedence. Samples at 2 ft are clean, and no additional investigation is needed.
45-Z11(0.5-2)-092106	MG/L	Lead	0.673		0.15	Yes	Lead will be removed to from 0 to water table (~6 ft bgs) to eliminate potential source for leaching since there are no sample data below 2 ft at this location.
Note:							
*-Only Aroclor-1260 was detected among all the PCB mixtures analyzed.							
SCTL- Soil Clean-up Target Levels from FDEP Ch.62-777, Table 2, and GCTL-Groundwater Cleanup Target Levels, from Ch.62-777, Table 1.							

mg/L - milligrams per liter

Aroclor-1260	0.5	17	0.36 U	0.33 U	0.34 U	0.32 U	0.4 U	0.33 U	0.34 U	0.33 U

Notes:

All concentrations reported in milligrams per kilogram (mg/kg).

SCTL^{RES} -Soil Cleanup Target Level Residential

LGW -Leachability based on Groundwater Criteria

1 = Ch 62-777 F.A.C Soil Cleanup Target Level (**SCTL**) reported in mg/kg

U -The analyte was analyzed for , but not detected.

J -Result is estimated

B- The analyte was detected in the associated method and/or calibration blank.

UJ- Value non-detected estimated.

JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.

Values Bolded are analytes not detected by the Lab but are above the (**SCTL**) Soil Cleanup Target Level

Values Shaded are concentrations that exceed (**LGW**) Leachability based on Groundwater Criteria

Values Bold and Pale Blue are hits exceeding the (**SCTL**) Soil Cleanup Target Level

Values Bold and Shade are concentrations that exceed both **SCTL** and **LGW**

*z-Denotes Sample was validated

Notes:
All concentrations reported in milligrams per kilogram (mg/kg).
SCTL^{IND} - Soil Cleanup Target Level Industrial
LGW - Leachability based on Groundwater Criteria
1 = Ch 62-777 F.A.C Soil Cleanup Target Level (SCTL) reported in mg/kg
U - The analyte was analyzed for , but not detected.
J - Result is estimated
B- The analyte was detected in the associated method and/or calibration blank.
UJ- Value non-detected estimated.
JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.
E-Value was over Calibration
Values Bolded are analytes not detected by the Lab but are above the (SCTL) Soil Cleanup Target Level
Values Shaded are concentrations that exceed (LGW) Leachability based on Groundwater Criteria
Values Bold and Pale Blue are hits exceeding the (SCTL) Soil Cleanup Target Level
Values Bold and Shade are concentrations that exceed both SCTL and LGW
*z-Denotes Sample was validated

Notes:
All concentrations reported in milligrams per kilogram (mg/kg).
SCTL^{RES} -Soil Cleanup Target Level Residential
LGW -Leachability based on Groundwater Criteria
1 = Ch 62-777 F.A.C Soil Cleanup Target Level (**SCTL**) reported in mg/kg
U -The analyte was analyzed for , but not detected.
J -Result is estimated
B- The analyte was detected in the associated method and/or calibration blank.
UJ- Value non-detected estimated.
JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.
Values Bolded are analytes not detected by the Lab but are above the (**SCTL**) Soil Cleanup Target Level
Values Shaded are concentrations that exceed (**LGW**) Leachability based on Groundwater Criteria
Values Bold and Pale Blue are hits exceeding the (**SCTL**) Soil Cleanup Target Level
Values Bold and Shade are concentrations that exceed both **SCTL** and **LGW**
*z-Denotes Sample was validated

Notes:

All concentrations reported in milligrams per kilogram (mg/kg).

SCTL^{RES} - Soil Cleanup Target Level Residential

LGW - Leachability based on Groundwater Criteria

1 = Ch 62-777 F.A.C Soil Cleanup Target Level (SCTL) reported in mg/kg

U - The analyte was analyzed for , but not detected.

J - Result is estimated

B- The analyte was detected in the associated method and/or calibration blank.

UJ- Value non-detected estimated.

JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.

Values Bolded are analytes not detected by the Lab but are above the (SCTL) Soil Cleanup Target Level

Values Shaded are concentrations that exceed (LGW) Leachability based on Groundwater Criteria

Values Bold and Pale Blue are hits exceeding the (SCTL) Soil Cleanup Target Level

Values Bold and Shade are concentrations that exceed both SCTL and LGW

*z-Denotes Sample was validated

Aroclor-1260	2.6	17	0.33 U	0.32 U	0.33 U	0.33 U	0.34 U	0.33 U				

Notes:

All concentrations reported in milligrams per kilogram (mg/kg).

SCTL^{1IND} - Soil Cleanup Target Level Industrial

LGW - Leachability based on Groundwater Criteria

1 = Ch 62-777 F.A.C Soil Cleanup Target Level (**SCTL**) reported in mg/kg

U - The analyte was analyzed for , but not detected.

J - Result is estimated

B- The analyte was detected in the associated method and/or calibration blank.

UJ- Value non-detected estimated.

JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.

Values Bolded are analytes not detected by the Lab but are above the (**SCTL**) Soil Cleanup Target Level

Values Shaded are concentrations that exceed (**LGW**) Leachability based on Groundwater Criteria

Values Bold and Pale Blue are hits exceeding the (**SCTL**) Soil Cleanup Target Level

Values Bold and Shade are concentrations that exceed both **SCTL** and **LGW**

*z-Denotes Sample was validated

Notes:
 All concentrations reported in milligrams per liter (mg/l).
TCLP^{Limit} - TCLP Regulatory Limit
 U - The analyte was analyzed for , but not detected.
 J - Result is estimated
 B- The analyte was detected in the associated method and/or calibration blank.
 UJ- Value non-detected estimated.
 JB- Estimate value..The analyte was detected in the associated method and/or calibration blank.
 Values Boded are analytes not detected by the Lab but are above the (TCLP) Limit
 Values Bold and Shade are concentrations that exceed the TCLP Limit

Data Validation Report

CTO 45 – DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
CH2M Hill Constructors, Inc.

SDG: 2504699

Date: 9/27/2006

Approved For Quality Assurance By:
Carmel L. Robinson Date 10/26/06

Disclaimer:

The validation performed and reported herein is based on specifications and procedures presented to eDATApro with the associated data package. Any qualifications or review not specified with package requirements was based on direction and/or input from the CH2Mhill project Chemist.

Information contained in this report based solely on the hardcopy and/or electronic deliverables that were submitted to eDATApro. EDATApro reserves the rights to modify or change the validation report if new information is presented or if this report is determined to be inaccurate or incomplete.

Cover Letter

Validation Report Date: 9/27/2006

Lab Report Date: 9/14/2006

Contract Task Order (CTO) Number: 45

Project Name: DRMO Truman Annex – Key West, FL

Area: PCB & Lead Soil Delineation

Sample Delivery Group: 2504699

CTO Project Manager: Bethany Garvey

Data validation personnel: Dana Harper and Mike Stewart

Data Deliverables Included:

Validation Report:

- Data Validation Report
 - Introduction
 - Data Validation Findings Summary
 - Table 1-1, Summary of Qualified Data
 - Appendix I – Qualified Laboratory Form 1s
 - Appendix II – Chain of Custody
 - Appendix III – Copies of completed checklists
 - EDD with applied data qualifiers

- Data Validation Reference Package, including
 - Table 1-2, Acronyms and Abbreviation List
 - Table 1-3, Data Qualifier Reference Table
 - Table 1-4, Qualification Code Reference Table

Approval Signature: _____ Date: _____

INTRODUCTION:

CTO Number: 45
 Project Name: DRMO Truman Annex – Key West, FL
 Area: PCB & Lead Soil Delineation
 Laboratory: PEL Laboratories
 Laboratory Package No.: 2504699
 Matrix: Soil and Water QC

Environmental Data Professional, LLC (eDATApro) received one data package containing twenty-one field samples, two field duplicates, two equipment blank and one matrix spike/duplicate pair. These samples were validated utilizing CCI-approved checklists based on the Department of Defense Quality System Manual as part of the DOD QSM – Navy Installation Restoration Chemical Data Quality Manual (IRCDQM) and the project specific Scope of Work.

The following samples were reviewed:

Sample ID	Matrix	Lab ID	Parent Sample ID	Collection Date/Time	Analyses
45-B8-(0.5-2)-090606	Soil	250469901		9/6/2006 09:09	[1][2]

[2] – Lead (total) – SW-846 7421

DATA VALIDATION FINDINGS SUMMARY

I. **General Package:**

Please note that project specific analyte lists and project specific reporting limits were not submitted with the validation package and accordingly, these items could not be evaluated during validation.

Please note that only a subset of the samples listed in the Chain-of-custody (COC) were submitted with analytical results in this data package. Many samples were noted as "Hold" on the COC. Accordingly, only the sample results contained in the data package were evaluated.

Please note that the parent sample for the field duplicate 45-K1-(0.5-2)-090606FD could not be found with this data package and accordingly, no evaluation was performed using this sample.

II. **Executive Summary:**

The findings of this quality assurance report are based upon the comprehensive review of the following data categories: chain of custody documentation, holding times, laboratory method and field blank analyses, surrogate compound recoveries, matrix spike compound recoveries and reproducibility, GCMS mass tuning results, initial and continuing calibration, second source recovery and internal standard area performance summaries, target compound identification, laboratory control sample results, laboratory and blind field duplicate sample results, detection limits/sensitivity, and electronic data deliverables.

The analyses were performed acceptably, but require several qualifying statements; it is recommended that the analytical data be used only with the qualifying statements provided below. Any aspects of the data, which are not discussed in this report, should be considered qualitatively and quantitatively valid as reported, based on the deliverables reviewed.

III. **Organic Analyses:**

• **PCBs – 8082**

The sample 45-L3-(0-0.5)-090606 was reported with the surrogate Decachlorobiphenyl as above acceptance criteria. Since this sample was reported with a positive hit for Aroclor 1260, this result was qualified as estimated "J/S".

The RPD reported between the matrix spike and matrix spike duplicate samples using the parent sample 485-K10-(0.5-2)-090606 was reported as outside acceptance criteria. Since recoveries in both samples and the control samples were within acceptance criteria, no qualification was warranted.

Field duplicate results were evaluated between 45-B10-(0.5-2)-090606 and 45-B10-(0.5-2)-090606FD. No qualification warranting discrepancies were found.

IV. Inorganic Analyses:

- **Total Lead – 7421**

All of the samples (excluding 45-K4-(0.5-2)-090606) were analyzed using a 500 times dilution. The data package notes that this dilution was performed with the knowledge and consent of the client. Please note that this dilution is reflected in the reporting limits and may be more significant to those samples reported as "non-detect" at the elevated reporting limits. The excluded sample was analyzed at 1000 time dilution with appropriate reporting limits.

Please note that back calculation determined that the original, unadjusted reporting limit (without dilution, dry weight and sample weight) was 0.1 mg/Kg. This unadjusted reporting limit did not match the CRDL found on the laboratories form 10 but according to the laboratory, the reporting limits were negotiated with the client and are appropriate.

The matrix spike, matrix spike duplicate, and post digestion spike samples using the parent sample 45-B8-(0.5-2)-090606 and 45-K10-(0.5-2)-090606 were reported with percent recoveries of zero for Lead. Since the spike amount is very close to the RL after the dilution factors of the parent sample, no qualifications were warranted. The post digestion spike recoveries were within acceptance criteria.

The duplicate sample using the parent sample 45-K10-(0.5-2)-090606 was reported with a RPD above acceptance criteria. Since the parent sample was reported as non-detect, no qualification was warranted.

Field duplicate results were evaluated between 45-B10-(0.5-2)-090606 and 45-B10-(0.5-2)-090606FD. No qualification warranting discrepancies were found.

TABLE 1-1

SUMMARY OF QUALIFIED DATA

<u>Target Compound</u>	<u>Sample(s) Affected</u>	<u>Qualifier</u>	<u>Qualification Code or Reason for Qualification</u>
Aroclor-1260	45-L3-(0-0.5)-090606	J	S-Surrogate outside acceptance criteria.-

TABLE 1-2

ACRONYMS AND ABBREVIATIONS

%R – Percent Recovery

%D – Percent Difference

LCS – Laboratory Control Sample

LCSD – Laboratory Control Sample Duplicate

MS – Matrix Spike

MSD – Matrix Spike Duplicate

QC – Quality Control

**TABLE 1-3
DATA QUALIFIER REFERENCE**

Qualifier	Organics	Inorganics
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
J	The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.	The associated value is an estimated quantity.
N	The analysis indicated the presence of an analyte for which there was presumptive evidence to make a "tentative identification"	Not applicable.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.	Not applicable.
UJ	The analyte was not deemed above the reported sample quantitation. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.	The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.	The data are unusable. (Note: Analyte may or not be present)
G	The analyte detected in the associated field, equipment, and/or trip blank.	The analyte detected in the associated field, equipment, and/or trip blank.
B	The analyte detected in the associated method and/or calibration blank	The analyte detected in the associated method and/or calibration blank

TABLE 1-4
QUALIFICATION CODE REFERENCE

Qualifier	Organics	Inorganics
S	Surrogate recovery was outside QC limits.	The sequence or number of standards used for the calibration was incorrect.

Data Validation Report

CTO 45 – DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
CH2M Hill Constructors, Inc.

SDG: 2504774

Date: 10/23/2006

Approved For Quality Assurance By:
Candice L. Robinson Date 10/26/06

Disclaimer:

The validation performed and reported herein is based on specifications and procedures presented to eDATApro with the associated data package. Any qualifications or review not specified with package requirements was based on direction and/or input from the CH2Mhill project Chemist.

Information contained in this report based solely on the hardcopy and/or electronic deliverables that were submitted to eDATApro. EDATApro reserves the rights to modify or change the validation report if new information is presented or if this report is determined to be inaccurate or incomplete.

Approval Signature: _____ Date: _____

INTRODUCTION:

CTO Number: 45
Project Name: DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
Laboratory: PEL Laboratories
Laboratory Package No.: 2504774
Matrix: Soil and Water QC

Environmental Data Professional, LLC (eDATApro) received one data package containing eight field samples. These samples were validated utilizing CCI-approved checklists based on the Department of Defense Quality System Manual as part of the DOD QSM – Navy Installation Restoration Chemical Data Quality Manual (IRCDQM) and the project specific Scope of Work.

The following samples were reviewed:

Sample ID	Matrix	Lab ID	Parent Sample ID	Collection Date/Time	Analyses
45-G1(0-0.5)-091506	Soil	250477401			[1]
45-G2(0-0.5)-091506	Soil	250477402			[1][2]
45-G4(0-0.5)-091506	Soil	250477404			[1][2]
45-G6(0-0.5)-091506	Soil	250477406			[1][2]
45-G10(0-0.5)-091506	Soil	250477410			[1][2]

DATA VALIDATION FINDINGS SUMMARY

I. **General Package:**

Please note that project specific analyte lists and project specific reporting limits were not submitted with the validation package and accordingly, these items could not be evaluated during validation.

Please note that only a subset of the samples listed in the Chain-of-custody (COC) were submitted with analytical results in this data package. Many samples were noted as "Hold" on the COC. Accordingly, only the sample results contained in the data package were evaluated.

Please note that the laboratory narrative noted 20 samples received but only 8 samples were analyzed and reported. No communications were found in this data package noting which samples were to be reported and which analyses were to be performed. Accordingly, only the data submitted for these eight samples was reviewed.

II. **Executive Summary:**

The findings of this quality assurance report are based upon the comprehensive review of the following data categories: chain of custody documentation, holding times, laboratory method and field blank analyses, surrogate compound recoveries, matrix spike compound recoveries and reproducibility, GCMS mass tuning results, initial and continuing calibration, second source recovery and internal standard area performance summaries, target compound identification, laboratory control sample results, laboratory and blind field duplicate sample results, detection limits/sensitivity, and electronic data deliverables.

The analyses were performed acceptably, but require several qualifying statements; it is recommended that the analytical data be used only with the qualifying statements provided below. Any aspects of the data, which are not discussed in this report, should be considered qualitatively and quantitatively valid as reported, based on the deliverables reviewed.

III. **Organic Analyses:**

- **PCBs – 8082**

All of the samples were diluted by a factor of ten as noted by an agreed upon dilution between the laboratory and CH2M Hill. This dilution was cause for several surrogate recovery non-conformances but did not warrant any qualification. Reporting limits were correctly adjusted.

When positive hits were confirmed on both columns and the %D between these columns was acceptable, the higher of the two values was correctly reported. When the %D was not acceptable, the lower of the two values was reported. The sample 45-G4(0-0.5)-091506 was reported with a %D of 120% and accordingly, was qualified as estimated "J/P".

IV. Inorganic Analyses:

- **Total Lead – 7421**

All of the samples were analyzed using a 100 times dilution. The data package notes that this dilution was performed with the knowledge and consent of the client. Please note that this dilution is reflected in the reporting limits and may be more significant to those samples reported as “non-detect” at the elevated reporting limits.

Please note that back calculation determined that the original, unadjusted reporting limit (without dilution, dry weight and sample weight) was 0.1 mg/Kg. This unadjusted reporting limit did not match the CRDL found on the laboratories form 10 but according to the laboratory, the reporting limits were negotiated with the client and are appropriate.

Please note that no matrix spike analyses were associated with this data set. Accordingly, no evaluation of matrix affect could be performed.

The serial dilution using sample 45-G2(0-0.5)-091506 was reported with a % difference value greater than acceptance limits. Accordingly, the parent sample was qualified as estimated “J/A”.

The CCB proceeding the field sample analyses was reported with a positive hit for lead between the MDL and the RL. Accordingly, the positive results reported for the field samples were qualified as “B/MB”.

TABLE 1-1

SUMMARY OF QUALIFIED DATA

<u>Target Compound</u>	<u>Sample(s) Affected</u>	<u>Qualifier</u>	<u>Qualification Code or Reason for Qualification</u>
Aroclor-1260	45-G4(0-0.5)-091506	J	P- Dual Column Confirmation %D >40%
Lead	45-G2(0-0.5)-091506	JB	A - ICP Serial Dilution %D were not within control limits. MB- Presumed contamination from preparation (method) blank or calibration blank.
Lead	45-G4(0-0.5)-091506 45-H4(0-0.5)-091506	JB	MB- Presumed contamination from preparation (method) blank or calibration blank.
Lead	45-G6(0-0.5)-091506 45-G10(0-0.5)-091506	B	MB- Presumed contamination from preparation (method) blank or calibration blank.

TABLE 1-2

ACRONYMS AND ABBREVIATIONS

%R – Percent Recovery

%D – Percent Difference

LCS – Laboratory Control Sample

LCSD – Laboratory Control Sample Duplicate

MS – Matrix Spike

MSD – Matrix Spike Duplicate

QC – Quality Control

TABLE 1-3

DATA QUALIFIER REFERENCE

Qualifier	Organics	Inorganics
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
J	The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.	The associated value is an estimated quantity.
N	The analysis indicated the presence of an analyte for which there was presumptive evidence to make a "tentative identification"	Not applicable.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.	Not applicable.
UJ	The analyte was not deemed above the reported sample quantitation. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.	The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.	The data are unusable. (Note: Analyte may or not be present)
G	The analyte detected in the associated field, equipment, and/or trip blank.	The analyte detected in the associated field, equipment, and/or trip blank.
B	The analyte detected in the associated method and/or calibration blank	The analyte detected in the associated method and/or calibration blank

TABLE 1-4

QUALIFICATION CODE REFERENCE

Qualifier	Organics	Inorganics
P	Instrument performance for pesticides was poor. Dual column confirmation %D > 40%.	Poor Digestion Spike recovery was not within control limits.
A	Not applicable.	ICP Serial Dilution %D were not within control limits.
MB	Presumed contamination from preparation (method) blank.	Presumed contamination from preparation (method) blank or calibration blank.

Data Validation Report

CTO 45 – DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
CH2M Hill Constructors, Inc.

SDG: 2504789

Date: 10/12/2006

Approved For Quality Assurance By:

Candice L. Robinson Date 10/26/06

Disclaimer:

The validation performed and reported herein is based on specifications and procedures presented to eDATApro with the associated data package. Any qualifications or review not specified with package requirements was based on direction and/or input from the CH2Mhill project Chemist.

Information contained in this report based solely on the hardcopy and/or electronic deliverables that were submitted to eDATApro. EDATApro reserves the rights to modify or change the validation report if new information is presented or if this report is determined to be inaccurate or incomplete.

Validation Report Date: 10/12/2006

Lab Report Date: 10/5/2006

Contract Task Order (CTO) Number: 45

Project Name: DRMO Truman Annex – Key West, FL

Area: PCB & Lead Soil Delineation

Sample Delivery Group: 2504789

CTO Project Manager: Bethany Garvey

Data validation personnel: Dana Harper and Mike Stewart

Data Deliverables Included:

Validation Report:

___ Data Validation Report

___ Introduction

___ Data Validation Findings Summary

___ Table 1-1, Summary of Qualified Data

___ Appendix I – Qualified Laboratory Form 1s

___ Appendix II – Chain of Custody

___ Appendix III – Copies of completed checklists

___ EDD with applied data qualifiers

___ Data Validation Reference Package, including

___ Table 1-2, Acronyms and Abbreviation List

___ Table 1-3, Data Qualifier Reference Table

___ Table 1-4, Qualification Code Reference Table

Approval Signature: _____

Date: _____

INTRODUCTION:

CTO Number: 45
Project Name: DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
Laboratory: PEL Laboratories
Laboratory Package No.: 2504789
Matrix: Soil and Water QC

Environmental Data Professional, LLC (eDATApro) received one data package containing twenty-two field samples, four field duplicates, three equipment blanks and 2 pairs of matrix spike/spike duplicate samples. These samples were validated utilizing CCI-approved checklists based on the Department of Defense Quality System Manual as part of the DOD QSM – Navy Installation Restoration Chemical Data Quality Manual (IRCDQM) and the project specific Scope of Work.

The following samples were reviewed:

Sample ID	Matrix	Lab ID	Parent Sample ID	Collection Date/Time	Analyses
45-R1(0.5-2)-091906	Soil	250478901		9/19/2006 22:30	[1][2]

[2] – Lead (total) – SW-846 6010

DATA VALIDATION FINDINGS SUMMARY

General Package:

Please note that project specific analyte lists and project specific reporting limits were not submitted with the validation package and accordingly, these items could not be evaluated during validation.

Please note that only a subset of the samples listed in the Chain-of-custody (COG) were submitted with analytical results in this data package. Many samples were noted as "Hold" on the COC. Accordingly, only the sample results contained in the data package were evaluated.

II. Executive Summary:

The findings of this quality assurance report are based upon the comprehensive review of the following data categories: chain of custody documentation, holding times, laboratory method and field blank analyses, surrogate compound recoveries, matrix spike compound recoveries and reproducibility, GCMS mass tuning results, initial and continuing calibration, second source recovery and internal standard area performance summaries, target compound identification, laboratory control sample results, laboratory and blind field duplicate sample results, detection limits/sensitivity, and electronic data deliverables.

The analyses were performed acceptably, but require several qualifying statements; it is recommended that the analytical data be used only with the qualifying statements provided below. Any aspects of the data, which are not discussed in this report, should be considered qualitatively and quantitatively valid as reported, based on the deliverables reviewed.

III. Organic Analyses: • PCBs-8082

The LCS and LCSD samples associated with the water batch (equipment blanks) were both reported with the surrogate Decachlorobiphenyl as above acceptance criteria. Since all of the associated water samples were reported as non-detect, no qualification was warranted.

All of the field samples (soils) were analyzed at a ten time dilutions. These dilutions were noted in the data package as agreed upon by the client and that all reporting limits were still achieved. The laboratory correctly elevated reporting limits and surrogate recoveries are not applicable in the field samples due to this dilution.

All reported positive hits were correctly obtained from the highest value of the two columns used for analysis. The %difference between columns when a positive hit was reported was never greater than the acceptance criteria of 40%.

Field duplicate results were evaluated between all four dup/parent pairs. All acceptance criteria were met and no qualification warranting discrepancies were found.

IV. Inorganic Analyses:

- **Total Lead – 6010**

All of the samples (excluding 45-R2(0.5-2)-091906, 45-R4(0.5-2)-091906, 45-X4(0.5-2)-091906, 45-X8(0-0.5)-091906, 45-FD-36-091906, 45-X5(0.5-2)-091906 and 45-R12(0-0.5)-091906) were analyzed using a 100 times dilution. The associated data package (SDG 2504699) noted that this dilution was performed with the knowledge and consent of the client. Please note that this dilution is reflected in the reporting limits and may be more significant to those samples reported as “non-detect” at the elevated reporting limits. The excluded samples were analyzed at 200 time dilutions with appropriate reporting limits.

The matrix spike, matrix spike duplicate samples using the parent samples 45-R5(0.5-2)-091906 and 45-X4(0.5-2)-091906 were all reported with percent recoveries of zero for Lead. Since the spike amount is very close to the RL after the dilution factors of the parent sample, no qualifications were warranted. The post digestion spike recoveries were within acceptance criteria.

All four of the field duplicate/parent samples were reported with RPD values outside the acceptance criteria of 30%. Accordingly, results for these samples were qualified as estimated “J/E” where positive hits were reported.

Several of the continuing calibration blanks were reported with negative values whose absolute values were greater than the MDL and less than the RL. According to specific guidance from CH2Mhill, these results were not qualified since the values were not greater than the RL.

TABLE 1-1

SUMMARY OF QUALIFIED DATA

<u>Target Compound</u>	<u>Sample(s) Affected</u>	<u>Qualifier</u>	<u>Qualification Code or Reason for Qualification</u>
Lead	45-R8(0-0.5)-091906	J	E-Duplicates showed poor agreement
Lead	45-FD-35-091906	J	E-Duplicates showed poor agreement
Lead	45-R12(0-0.5)-091906	J	E-Duplicates showed poor agreement
Lead	45-X10(0.5-2)-091906	J	E-Duplicates showed poor agreement
Lead	45-FD-37-091906	J	E-Duplicates showed poor agreement
Lead	45-X3(0-0.5)-091906	J	E-Duplicates showed poor agreement
Lead	45-FD-38-091906	J	E-Duplicates showed poor agreement

TABLE 1-2

ACRONYMS AND ABBREVIATIONS

%R – Percent Recovery

MS – Matrix Spike

MSD – Matrix Spike Duplicate

QC – Quality Control

TABLE 1-3
DATA QUALIFIER REFERENCE

Qualifier	Organics	Inorganics
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
J	The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.	The associated value is an estimated quantity.
N	The analysis indicated the presence of an analyte for which there was presumptive evidence to make a "tentative identification"	Not applicable.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.	Not applicable.
UJ	The analyte was not deemed above the reported sample quantitation. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.	The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.	The data are unusable. (Note: Analyte may or not be present)
G	The analyte detected in the associated field, equipment, and/or trip blank.	The analyte detected in the associated field, equipment, and/or trip blank.
B	The analyte detected in the associated method and/or calibration blank	The analyte detected in the associated method and/or calibration blank

Data Validation Report

CTO 45 – DRMO Truman Annex – Key West, FL
Area: PCB & Lead Soil Delineation
CH2M Hill Constructors, Inc.

SDG: 2504848

Date: 10/16/2006

Approved For Quality Assurance By:

Candice L. Robinson Date 10/26/06

Disclaimer:

The validation performed and reported herein is based on specifications and procedures presented to eDATApro with the associated data package. Any qualifications or review not specified with package requirements was based on direction and/or input from the CH2Mhill project Chemist.

Information contained in this report based solely on the hardcopy and/or electronic deliverables that were submitted to eDATApro. EDATApro reserves the rights to modify or change the validation report if new information is presented or if this report is determined to be inaccurate or incomplete.

INTRODUCTION:

CTO Number: 45

Project Name: DRMO Truman Annex - Key West, FL

Area: PCB & Lead Soil Delineation

Laboratory: PEL Laboratories

Laboratory Package No.: 2504848

Matrix: Soil and Water QC

Environmental Data Professional, LLC (eDATApro) received one data package containing nine field samples. These samples were validated utilizing CCI-approved checklists based on the Department of Defense Quality System Manual as part of the DOD QSM - Navy Installation Restoration Chemical Data Quality Manual (IRCDQM) and the project specific Scope of Work.

The following samples were reviewed:

Sample ID	Matrix	Lab ID	Parent Sample ID	Collection Date/Time	Analyses
45-K4(0.5-2)-090606	Soil	250484801		09/06/2006 11:33	[2]
45-E1(0-0.5)-091406	Soil	250484802		09/14/200611:01	[1]
45-E2(0.5-2)-091406	Soil	250484803		09/14/200611:08	[1]
45-E3(0.5-2)-091406	Soil	250484804		09/14/200611:13	[1]
45-X1(0-0.5)-091906	Soil	250484805		09/19/2006 14:08	[2]
45-X3(0-0.5)-091906	Soil	250484806		09/19/2006 13:58	[2]
45-X9(0.5-2)-091906	Soil	250484807		09/19/2006 12:47	[1], [2]
45-Y3(0.5-2)-092006	Soil	250484808		09/20/2006 10:31	[1]
45-Z11(0.5-2)-092106	Soil	250484809		09/21/2006 11:18	[2]

Analyses Performed Codes:

[1] - Polychlorinated Biphenyls (PCBs) SPLP extraction - SW-846 8082 /

[2] - Lead (SPLP extraction) - SW-846 6010

DATA VALIDATION FINDINGS SUMMARY

I. **General Package:**

Please note that project specific analyte lists and project specific reporting limits were not submitted with the validation package and accordingly, these items could not be evaluated during validation.

Please note that only a subset of the samples listed in the Chain-of-custody (COC) were submitted with analytical results in this data package. Handwritten requests for the SPLP analyses included in this data package are noted as "Additional analysis added by Kaye Walker". Only the SPLP data for the samples included in this data package were reviewed and reported herein.

II. **Executive Summary:**

The findings of this quality assurance report are based upon the comprehensive review of the following data categories: chain of custody documentation, holding times, laboratory method and field blank analyses, surrogate compound recoveries, matrix spike compound recoveries and reproducibility, GCMS mass tuning results, initial and continuing calibration, second source recovery and internal standard area performance summaries, target compound identification, laboratory control sample results, laboratory and blind field duplicate sample results, detection limits/sensitivity, and electronic data deliverables.

The analyses were performed acceptably, but require several qualifying statements; it is recommended that the analytical data be used only with the qualifying statements provided below. Any aspects of the data, which are not discussed in this report, should be considered qualitatively and quantitatively valid as reported, based on the deliverables reviewed.

III. **Organic Analyses:**

- **SPLP PCBs – 8082 / SPLP**

The sample 45-X9(0.5-2)-091906 was extracted using 470 mL down to a final volume of 10mL. The other samples in this data package were extracted using 240-245mL down to 2.5 mL final volume. This discrepancy is possible explained by the laboratory note of heavy emulsion in the extract. Please note that although this non-conformance does not warrant any qualification, the resulting reporting limits were adjusted accordingly.

IV. **Inorganic Analyses:**

- **SPLP Lead – 6010 / SPLP**

One or more of the continuing calibration blanks were reported with values greater than the MDL and less than the RL or absolute values greater than the MDL and less than the RL. According to specific guidance from CH2Mhill, these results were not qualified since the values were not greater than the RL.

The sample 45-X1(0-0.5)-091906 was analyzed at a ten times dilution due to the high concentrations of Lead. Reporting limits were adjusted accordingly and no qualification was warranted.

The CCB proceeding the field sample 45-X1(0-0.5)-091906 was reported with a positive result greater than the MDL and less than the RL. Accordingly, the positive result reported for this field sample was qualified as "B/MB".

TABLE 1-1

SUMMARY OF QUALIFIED DATA

<u>Target Compound</u>	<u>Sample(s) Affected</u>	<u>Qualifier</u>	<u>Qualification Code or Reason for Qualification</u>
Lead	45-X1(0-0.5)-091906	B	MB- Presumed contamination from preparation (method) blank or calibration blank.

TABLE 1-2

ACRONYMS AND ABBREVIATIONS

%R – Percent Recovery

%D – Percent Difference

EDD – Electronic Data Deliverable

LCS – Laboratory Control Sample

LCSD – Laboratory Control Sample Duplicate

MS – Matrix Spike

MSD – Matrix Spike Duplicate

QC – Quality Control

TABLE 1-3
DATA QUALIFIER REFERENCE

Qualifier	Organics	Inorganics
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
J	The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.	The associated value is an estimated quantity.
N	The analysis indicated the presence of an analyte for which there was presumptive evidence to make a "tentative identification"	Not applicable.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.	Not applicable.
UJ	The analyte was not deemed above the reported sample quantitation. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.	The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.	The data are unusable. (Note: Analyte may or not be present)
G	The analyte detected in the associated field, equipment, and/or trip blank.	The analyte detected in the associated field, equipment, and/or trip blank.
B	The analyte detected in the associated method and/or calibration blank	The analyte detected in the associated method and/or calibration blank
