RE: RCRA Facility Investigation and Confirmation Assessment Work Plan for Area of Concern "C," US Naval Station (NAVSTA), Mayport, Florida

Dear Ms. Wilson:

I have reviewed the above document dated April 1999 (received April 20, 1999). The document is acceptable; however, please consider the following comments during the investigation:

1. If sediment sampling occurs, please utilize the MacDonald, 1994, values for ecological screening purposes.
2. Please utilize the GCTLs and SCTLs in Chapter 62-777, F.A.C. for analytical constituent assessment, remembering to evaluate the leaching values for soils irrespective of whether or not analytes are found in ground water which exceed specific GCTLs. Additionally, when there are instances where subsurface soil exceeds the SCTLs for a residential direct exposure scenario, these should be noted and taken into account when making site recommendations.

If you need further clarification or any additional information, please feel free to contact me at 850-921-4230.

Sincerely,

James H. Cason, P.G.
Remedial Project Manager
