**SDG NARRATIVE
MP013**

The following report contains the analytical results for twenty one water samples and one quality control sample submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received June 28, 29 and 30, 2000, according to documented sample acceptance procedures.

This SDG consists of three (3) laboratory ID's: A0F280235, A0G010106 and A0G010107.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 0.4, 2.62.6, 1.9, 2.2 and 3.0° C.

(See STL's Cooler Receipt Form for additional information.)

Cooler Receipt Form/Narrative

- Were custody seals on the outside of the cooler and intact? Yes No
If YES, Quantity 2 Location Overltd
Were the custody seals signed and dated? Yes No NA
 - Shipper's packing slip attached to this form? Yes No
 - Were custody papers included inside the cooler and relinquished? Yes No
 - Did you sign the custody papers in the appropriate place? Yes No
 - Packing material used:
Peanuts Bubble Wrap Vermiculite Foam None Other: _____
 - Cooler temperature upon receipt See BACK °C (see back of form for multiple coolers/temp)
METHOD: Temperature Vial Coolant Against Bottles
COOLANT: Wet Ice Blue Ice Dry Ice Water None
 - Were all the bottles sealed in separate plastic bags? Yes No
 - Did all bottles arrive in good condition (Unbroken)? Yes No
 - Did all bottle labels and tags agree with the custody papers? Yes No
 - Were samples at the correct pH? Yes No NA
 - Were correct bottles used for the tests indicated? Yes No
 - Were air bubbles >6 mm in any VOA vials? Yes No NA
 - Was a sufficient amount of sample sent in each bottle? Yes No
- Contacted PM DJP Date: 6/28/00 by: SDE via Voice Mail Verbal Other
Concerning: Incorrect preserved cyanide bottle, broken vial, mislabeled bottle

MACRO | MACRO

- CHAIN OF CUSTODY archive this on bottle per DJP
 - SR1A Samples were received under proper custody procedures and without discrepancies.
 - SR1B The chain of custody and sample bottles did not agree. The following discrepancies occurred didn't receive MPT-64-SV01-08 from COC, did receive MPT-64-SV01-07 not on COC.

- SAMPLE CONDITION
 - SR2A Sample(s) _____ were received or requested after the recommended holding time had expired.
 - SR2B Sample(s) _____ were received with insufficient volume
 - SR2C Sample(s) vial of MPT-64-GW-07-05 were received in a broken container.

- SAMPLE PRESERVATION
 - SR3A Sample(s) _____ were further preserved in sample receiving to meet recommended pH level(s).
 - SR3B Sample(s) _____ were received with bubble > 6 mm in diameter (cc: PM)

- NCM
 - SR4A NCM has been generated. Refer to Clouseau for details

Other Anomalies (see below or back)
Cyanide bottle for MPT-64-GW-01-11 was preserved with HNO₃. Instead of NASH, Archive per DJP

✓ Log TB in ledger list per DJP
✓ Also rec'd MPT-64-GW-06-07 BNAs/met not on COC

SDG NARRATIVE

MP013

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Acid preservation causes 2-Chloroethyl vinyl ether to decompose. When detected, the concentration found will be reported; however, a true reporting limit cannot be reported when the compound is not detected.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Sample(s) which contain concentrations of target analyte(s) at a reportable level in the associated method blank(s) have been flagged with B. All target analytes in the method blank must be below the reporting limits (RL) or the associated sample(s) must be ND with the exception of Methylene chloride, Acetone, and 2-Butanone. These are common laboratory contaminants and may be present in concentrations up to five times the reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SAMPLE SUMMARY

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SDG NARRATIVE
MP013

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SW846 8270C METHOD BLANK SUMMARY

BLANK WORKORDER NO.

DFPHW101

Lab Name: Severn Trent Laboratories, Inc.

Lab Code: QESCAN

SDG Number:MP013

Lab File ID: DFPHW101.

Lot Number: AOG010107

Date Analyzed: 07/11/00

Time Analyzed: 08:29

Matrix: WATER

Date Extracted:07/06/00

GC Column: DB-5.625 ID: .32

Extraction Method: 3520C

Instrument ID: HP6

Level:(low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method / preparation blanks at the following maximum concentrations:

Affected samples : All

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level (aqueous)</u>
Aluminum ⁽¹⁾	39.9 ug/L	199.5 ug/L
Antimony	4.5 ug/L	22.5 ug/L
Barium	1.0 ug/L	5.0 ug/L
Beryllium	0.70 ug/L	3.5 ug/L
Cadmium	0.30 ug/L	1.5 ug/L
Calcium	621 ug/L	3105 ug/L
Copper	1.7 ug/L	8.5 ug/L
Cyanide ⁽¹⁾	5.0 ug/L	25.0 ug/L
Iron ⁽¹⁾	27.2 ug/L	136 ug/L
Magnesium	51.9 ug/L	259.5 ug/L
Manganese ⁽¹⁾	0.87 ug/L	4.35 ug/L
Tin	4.1 ug/L	20.5 ug/L
Vanadium	0.90 ug/L	4.5 ug/L
Zinc ⁽¹⁾	11.9 ug/L	59.5 ug/L

⁽¹⁾ - Maximum concentration present in an aqueous preparation blank

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors were taken into consideration in evaluation for blank contamination. Positive results less than the blank action level for aluminum, antimony, barium, beryllium, cyanide, iron, vanadium and zinc were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as the results reported were either greater than the blank action level or were nondetected, "U".

Notes

A LCS Percent Recovery was less than 80% quality control limits for cyanide. However, the sample analyzed for LCS was not from this SDG and the decision not to qualify for this noncompliance was based on this factor.

A field duplicate summary table is included in Appendix C.

The Matrix Spike/Matrix Spike Duplicate comparison was greater than 20% Relative Percent Difference for calcium and iron. However, validation action is not required MS/MSD comparison analyses.

The general chemistry case narrative indicates that a continuing calibration associated with batch 0196107 failed. However, the samples associated with this batch (MPT-G4-GW-20-11, MPT-G4-GW-21-08, MPT-G4-GW-22-08 and MPT-G4-GW-23-08) were not bracketed by the noncompliant CCV and validation action was not required.

TO: T. HANSEN
DATE: DECEMBER 7, 2000

- PAGE 3

Executive Summary

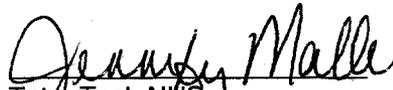

Laboratory Performance: Several analytes were present in the laboratory/preparation blanks.

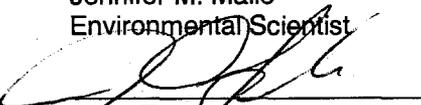

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy Installation Restoration Chemical Data Quality Manual" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
Qualified Analytical Results

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCB D% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$. (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop
- Y = % Solid content is less than 30%

SDG NARRATIVE

MP016

The following report contains the analytical results for twenty one water samples and two quality control samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received July 1, 6 and 7, 2000, according to documented sample acceptance procedures.

This SDG consists of three (3) laboratory ID's: A0G020105, A0G060210 and A0G070236.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 0.9, 0.9, 1.0, 1.3, 2.2 and 3.4° C.

(See STL's Cooler Receipt Form for additional information.)

**SDG NARRATIVE
MP016**

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the IDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Some reporting limits are lower than our standard reporting limit (SRL) but are supported by the laboratory's MDL and/or IDLs; however, there are no standards in the calibration curve low enough to support these value. The continuing calibration blanks and method blanks may not support the lower RL.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

ANALYTICAL METHODS SUMMARY

A0G020105

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>
Cyanide, Total	SW846 9012A
Inductively Coupled Plasma (ICP) Metals	SW846 6010B
Mercury in Liquid Waste (Manual Cold-Vapor)	SW846 7470A
Semivolatile Organic Compounds by GC/MS	SW846 8270C
Trace Inductively Coupled Plasma (ICP) Metals	SW846 6010B
Volatile Organics by GC/MS	SW846 8260B

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples MPT-G4-GW-20-11, MPT-G4-GW-21-08, MPT-G4-GW-22-08 and MPT-G4-GW-23-08 for the Total Cyanide analysis associated with batch 0196107 were not prepped with the Magnesium Chloride reagent as stated in the SOP.

Sample(s) that contain results between the MDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The closing Continuing Calibration Verification and Continuing Calibration Blank failed for the Total Cyanide analysis associated with batch 0196107. Samples MPT-G4-GW-20-11, MPT-G4-GW-21-08, MPT-G4-GW-22-08 and MPT-G4-GW-23-08 were reanalyzed after the recommended holding time had been exceeded to verify the original ND results. Only the original results are being reported.

↳ these samples are bracketed by
CCV's which met 80-120% ~~80-120%~~

VOA

Sample TB07060 was analyzed and reported at a 2X dilution due to the presence of acetone at concentrations above the linear calibration range of the instrument.

The following compounds were detected in laboratory method blanks and / or trip blanks* :

<u>Compound</u>	<u>Maximum Concentration (ug/L)</u>	<u>Blank Action Level (ug/L)</u>
*Acetone	61	610
Benzene	0.079	0.39
*Ethylbenzene	0.13	0.65
*1,1-dichloroethene	1.4	7
*2-butanone	23	230
*2-hexanone	3.1	15.5
*Methylene chloride	2.2	22
*Toluene	0.47	2.35
*Xylenes (total)	0.81	4.05

Sample aliquot and dilution factors were taken into consideration when applying blank action levels. The symbol * indicates analytes detected in trip blanks. Positive results for the above compounds less than blank action levels were qualified as undetected (U) in the affected samples. No actions were taken for 2-hexanone and xylene since all results for these analytes were reported as nondetected. Field quality control blanks were not qualified based on contamination in method blanks.

An initial calibration Relative Response Factor (RRF) fell below the 0.05 quality control limit for isobutyl alcohol on 7/12/00, on instrument A3UX9. Only nondetected results were reported for isobutyl alcohol and these were rejected (UR) in the affected samples.

An initial calibration % Relative Standard Deviation (%RSD) exceeded the 30% (and >50%) quality control limits for acetone on 7/12/00, on instrument A3UX9. Only nondetected results were reported for acetone and these were qualified as estimated (J) in the affected samples due to the RSD noncompliance exceeding 50%.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for acrolein and acetonitrile on 7/13/00, 07:56, on instrument A3UX9. Only nondetected results were reported for acrolein and acetonitrile and these were rejected (UR) in the affected samples.

Continuing calibration verification %Differences (%Ds) exceeded the 25% quality control limit for acetone, acrolein and 2-chloroethyl vinyl ether on 7/13/00, 07:56, on instrument A3UX9. Only nondetected results were reported for acetone and 2-chloroethyl vinyl ether and these were qualified as estimated (JJ) in the affected samples. Additionally, the nondetected results reported for acrolein were previously qualified for the above RRF noncompliance and did not require further qualification.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for isobutyl alcohol on 7/13/00, 08:19, on instrument A3UX9. Only nondetected results were reported for isobutyl alcohol and these were rejected (UR) in the affected samples.

Memo To: T. Hansen – Page 3

Date: 11/30/00

Initial calibration RRFs fell below the 0.05 quality control limit for acrolein, acetonitrile, isobutyl alcohol and propionitrile on 7/14/00, on instrument A3UX7. Only nondetected results were reported for the aforementioned compounds and these were rejected (UR) in the affected samples.

An initial calibration %RSD exceeded the 30% (and > 50%) quality control limits for acetone on 7/14/00, on instrument A3UX7. The positive results reported for acetone were previously qualified for blank contamination and did not require further qualification in the affected environmental samples. The positive result reported for acetone was qualified as estimated (J) in the trip blank TB070600.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for acrolein and acetonitrile on 7/14/00, 13:33, on instrument A3UX7. Only nondetected results were reported for acrolein and acetonitrile and these were rejected (UR) in the affected samples.

Continuing calibration verification %Ds exceeded the 25% quality control limit for vinyl acetate and acrolein on 7/14/00, 13:33, on instrument A3UX7. Only nondetected results were reported for vinyl acetate and these were qualified as estimated (UJ) in the affected samples. Additionally, the nondetected results reported for acrolein were previously qualified for the above RRF noncompliance and did not require further qualification.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for isobutyl alcohol and propionitrile on 7/14/00, 14:00, on instrument A3UX7. Only nondetected results were reported for isobutyl alcohol and propionitrile and these were rejected (UR) in the affected samples.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for acrolein and acetonitrile on 7/17/00, 08:45, on instrument A3UX7. Only nondetected results were reported for acrolein and acetonitrile and these were rejected (UR) in the affected samples.

A continuing calibration verification %D exceeded the 25% quality control limit for acetone on 7/17/00, 08:45, on instrument A3UX7. The positive results reported for acetone were previously qualified for blank contamination and did not require further qualification in the affected environmental samples. The positive result reported for acetone was qualified as estimated (J) in the trip blank TB070600.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for isobutyl alcohol and propionitrile on 7/14/00, 09:11, on instrument A3UX7. Only nondetected results were reported for isobutyl alcohol and propionitrile and these were rejected (UR) in the affected samples.

SVOA

Initial calibration %RSDs exceeded the 30% (but < 50%) quality control limit for 4-nitroquinoline-1-oxide and p-phenylamine diamine on 7/8/00, on instrument A4HP6. Only nondetected results were reported for nitroquinoline-1-oxide and p-phenylamine diamine, which do not require qualification based on this calibration noncompliance.

A continuing calibration verification %D exceeded the 25% quality control limit for a,a-dimethylphenethylamine on 7/10/00, on instrument A4HP6. Only nondetected results were reported for a,a-dimethylphenethylamine and these were qualified as estimated (UJ) in the affected samples.

Memo To: T. Hansen – Page 4

Date: 11/30/00

Continuing calibration verification %Ds exceeded the 25% quality control limit for 4-nitrophenol and 4-nitroaniline on 7/12/00, 06:34, on instrument A4HP6. Only nondetected results were reported for 4-nitrophenol and 4-nitroaniline and these were qualified as estimated (UJ) in the affected samples.

A continuing calibration verification %D exceeded the 25% quality control limit for a,a-dimethylphenethylamine On 7/12/00, 07:10, on instrument A4HP6. Only nondetected results were reported for a,a-dimethylphenethylamine and these were qualified as estimated (UJ) in the affected samples.

An initial calibration RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on 7/17/00, on instrument A4HP9. Only nondetected results were reported for 4-nitroquinoline-1-oxide and these were rejected (UR) in the affected samples.

Initial calibration %RSDs exceeded the 30% (but <50%) quality control limit for 2-acetoaminofluorene and p-phenylenediamine on 7/17/00, on instrument A4HP9. Only nondetected results were reported for 2-acetoaminofluorene and p-phenylene diamine, which do not require qualification based on this calibration noncompliance.

A continuing calibration verification RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on 7/19/00, 07:32, on instrument A4HP9. Only nondetected results were reported for 4-nitroquinoline-1-oxide and these were rejected (UR) in the affected samples.

Continuing calibration verification %Ds exceeded the 25% quality control limit for a,a-dimethylphenethylamine, 4-nitroquinoline-1-oxide, p-phenylaminediamine, pentachloronitrobenzene and n-nitrosomorpholine on 7/19/00, 07:32, on instrument A4HP9. Only nondetected results were reported for a,a-dimethylphenethylamine, p-phenylaminediamine, pentachloronitrobenzene and n-nitrosomorpholine and these were qualified as estimated (UJ) in the affected samples. Additionally, the nondetected results for 4-nitroquinoline-1-oxide were previously qualified for the above RRF noncompliance and did not require further qualification.

A continuing calibration verification %D exceeded the 25% quality control limit for bis(2-chloroethyl)ether on 7/20/00, 07:52, on instrument A4HP9. Only nondetected results were reported for bis(2-chloroethyl)ether and these were qualified as estimated (UJ) in the affected samples.

A continuing calibration verification RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on 7/20/00, 08:28, on instrument A4HP9. Only nondetected results were reported for 4-nitroquinoline-1-oxide and these were rejected (UR) in the affected samples.

Continuing calibration verification %Ds exceeded the 25% quality control limit for 1,4-dioxane, 4-nitroquinoline-1-oxide, aramite, p-phenylaminediamine, diallate, n-nitrosomorpholine and pentachloronitrobenzene on 7/20/00, 08:28, on instrument A4HP9. Only nondetected results were reported for 1,4-dioxane, aramite, p-phenylaminediamine, diallate, n-nitrosomorpholine and pentachloronitrobenzene and these were qualified as estimated (UJ) in the affected samples. Additionally, the nondetected results reported for 4-nitroquinoline-1-oxide were previously qualified for the above RRF noncompliance and did not require further qualification.

Date: 11/30/00

Additional Comments

Positive results below the reporting limit were qualified as estimated, (J), due to uncertainty near the detection limit.

It should be noted that according to the laboratory statement of work (SOW) both the volatile and semivolatile fraction both were to contain 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene. Since this would create data management problems, the laboratory reported these compounds in the semivolatile fraction only. It was not necessary to qualify any data based on this issue.

The analytical SOW listed pentachloroethane to be analyzed and reported as a volatile compound but the laboratory analyzed and reported this compound as a semivolatile compound. It was not necessary to qualify any data based on this issue.

The laboratory reported allyl chloride, which according to the analytical SOW was not a required volatile target compound. Because allyl chloride is an Appendix IX compound it was determined that this compound should remain in the database.

The laboratory reported Dinoseb, a,a-dimethylphenethylamine, chlorobenzilate, diallate, and N-nitrosopiperidine, which according to the analytical SOW were not required semivolatile target compounds. Because the aforementioned are Appendix IX compounds it was determined that these compounds should remain in the database.

The laboratory did not report hexachlorophene as requested in the analytical SOW. This compound is unstable and could not be analyzed.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Volatile Laboratory Control Sample (LCS) % recovery of acetone exceeded quality control limits. No qualifiers were assigned on this basis.

Semivolatile LCS % recoveries of 2,4,6-trichlorophenol, 4,6-dinitro-2-methylphenol, 4-chloroaniline and diethyl phthalate were not compliant with quality control limits. No qualifiers were required on this basis.

Semivolatile LCS % recoveries of hexachlorocyclopentadiene and dimethyl phthalate fell below 10%. In all samples except MPT-G4-GW-18-09, MPT-G4-GW-19-10 and MPT-G4-GW-20-10, the nondetected results reported for hexachlorocyclopentadiene were rejected (UR). Additionally, in samples MPT-G4-SU-21-08, MPT-G4-SU-22-08 and MPT-G4-SU-23-08, the nondetected results reported for dimethyl phthalate were rejected (UR).

Other Factors Affecting Data Quality: None

Memo To: T. Hansen – Page 6

Date: 11/30/00

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the NFESC guidelines "Navy IRCDQM" (Sept 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCD% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop

RESULTS AS REPORTED BY THE LABORATORY

TETRA TECH NUS, INC.

Lab Name: Severn Trent Laboratories, Inc.

SDG Number: MP016

Matrix: (soil/water) WG

Lab Sample ID: A0G020105 001

Method: SW846 8260B

Volatile Organics, GC/MS (8260B)

Sample WT/Vol: 5 / mL

Date Received: 07/01/00

Work Order: DFN4810V

Date Extracted: 07/13/00

Dilution factor: 1

Date Analyzed: 07/13/00

Moisture %:

QC Batch: 0196151

To: Murphy, Elizabeth
Subject: RE:

From what I can determine the ID should probably be MPT-G4-GW-33-05. But it was logged in as MPT-G4-GW-33-.

Howard,
Would you be able to shed some light on the missing information?

Thanks,
Beth

Subject:

Hi Terry,
I am working on CTO091 NS MAYPORT, SDG =MP016 . I have a sample number with the last digit(s) missing.
The chain is missing the last digit(s) as well. The sample number is as follows:
MPT-G4-GW-33-
I appreciate any help with this matter.

Thanks,
Beth

SDG NARRATIVE MP016

The following report contains the analytical results for twenty one water samples and two quality control samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received July 1, 6 and 7, 2000, according to documented sample acceptance procedures.

This SDG consists of three (3) laboratory ID's: A0G020105, A0G060210 and A0G070236.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 0.9, 0.9, 1.0, 1.3, 2.2 and 3.4° C.

(See STL's Cooler Receipt Form for additional information.)

SDG NARRATIVE

MP016

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

The reporting limit is lower than our standard reporting limit (SRL) but is supported by the laboratory's MDL and/or IDLs; however, there are no standards in the calibration curve low enough to support this value. The continuing calibration blanks and method blanks may not support the lower RL.

Acid preservation causes 2-Chloroethyl vinyl ether to decompose. When detected, the concentration found will be reported; however, a true reporting limit cannot be reported when the compound is not detected.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Sample(s) which contain concentrations of target analyte(s) at a reportable level in the associated method blank(s) have been flagged with B. All target analytes in the method blank must be below the reporting limits (RL) or the associated sample(s) must be ND with the exception of Methylene chloride, Acetone, and 2-Butanone. These are common laboratory contaminants and may be present in concentrations up to five times the reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The initial calibration check on instrument ux7 on July 14, 2000 was outside acceptable limits for 2-Hexanone. This is probably due to poor purge efficiency and the initial calibration is accepted.

**SDG NARRATIVE
MP016**

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SW846 8270C METHOD BLANK SUMMARY

DFQK0101

Lab Name: Severn Trent Laboratories, Inc.

Lab Code: QESCAN

SDG Number:MP016

Lab File ID: DFQK0101.

Lot Number: A0G020105

Date Analyzed: 07/09/00

Time Analyzed: 10:14

Matrix: WATER

Date Extracted:07/06/00

GC Column: DB-5.625 ID: .32

Extraction Method: 3520C

Instrument ID: HP6

Level:(low/med) LOW

MEMO TO: T. HANSEN
DATE: NOVEMBER 10, 2000

Semivolatiles

A initial calibration %RSD for 4-nitroquinoline-1-oxide was >30% but <50% quality control limit. No validation action was taken on this basis.

The continuing calibration RRF for 4-nitroquinoline-1-oxide was <0.05 quality control limit and the %D was >25% quality control limit affecting the samples analyzed on instrument A4HP7 on July 26. The nondetected results reported for 4-nitroquinoline-1-oxide in the affected samples were qualified as rejected, "UR".

The continuing calibration %D for 7,12-dimethylbenzo(a)anthracene was >25% quality control limit affecting the samples analyzed on instrument A4HP7 on July 26. The nondetected results reported for 7,12-dimethylbenzo(a)anthracene in the affected samples were qualified as estimated, "UJ".

The continuing calibration %Ds for 4-nitroquinoline-1-oxide and 7,12-dimethyl were >25% quality control limit affecting the samples analyzed on instrument A4HP7 on July 27. The nondetected results reported for 4-nitroquinoline-1-oxide and 7,12-dimethyl in the affected samples were qualified as estimated, "UJ".

The following compound was detected in the laboratory method blanks at the following maximum concentration:

<u>Compound</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Bis(2-ethyl hexyl)phthalate	3.6µg/L	36µg/L

An action level of 10X the maximum concentration was used to evaluate samples for blank contamination. The positive results less than the blank action level for bis(2-ethyl hexyl)phthalate were qualified, "U", as a result of blank contamination.

One semivolatile acid surrogate (2,4,6-tribromophenol) and two semivolatile base/neutral surrogates (nitrobenzene-d5 and 2-fluorobipheyl) were less than the lower quality control limits affecting sample MPT-G4-GW-44-04. The sample was reanalyzed out of hold time. All surrogate recoveries were within quality control limits. However, the original sample was used for validation purposes. No validation action was taken on the acid compounds. The results for the base/neutral compounds in sample MPT-G4-GW-44-04 were qualified as estimated, "J", and the nondetected results were qualified as estimated, "UJ".

The Blank Spike / Blank Spike Duplicate %Rs for hexachlorocyclopentadiene and dimethyl phthalate were <10%. The %Rs for several additional compounds were outside the quality control limits. The nondetected results reported for hexachlorocyclopentadiene and dimethyl phthalate were qualified as rejected, "UR".

Several other Matrix Spike / Matrix Spike Duplicate %Rs were above or below the quality control limits. However, no validation action was required.

The acid and base/neutral surrogates were high the Matrix Spike / Matrix Spike Duplicate samples of MPT-G4-GW-34-05. No validation action was taken on this basis.

The Matrix Spike / Matrix Spike Duplicate %R for hexachlorocyclopentadiene was <10% affecting samples MPT-G4-GW-34-05 and MPT -G4-GW-41-06. The nondetected results reported for hexachlorocyclopentadiene in the affected samples were qualified as rejected, "UR".

MEMO TO: T. HANSEN
DATE: NOVEMBER 10, 2000

The Matrix Spike / Matrix Spike Duplicate %Rs for hexachlorocyclopentadiene and dimethyl phthalate were <10% quality control limits affecting sample MPT-G4-GW-45-07. The nondetected results reported for hexachlorocyclopentadiene and dimethyl phthalate in the affected sample were qualified as rejected, "UR".

Notes

All positive results reported at concentration less than the reporting limits were qualified as estimated, "J".

The trip blanks were analyzed at the following dilutions:

TB070700	2X
TB071000	2.5X
TB071100	2.5X

It should be noted that according to the laboratory statement of work (SOW) both the volatile and semivolatile fraction both were to contain 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene. Since this would create data management problems, the laboratory reported these compounds in the semivolatile fraction only. It was not necessary to qualify any data based on this issue.

The analytical SOW listed pentachloroethane to be analyzed and reported as a volatile compound but the laboratory analyzed and reported this compound as a semivolatile compound. It was not necessary to qualify any data based on this issue.

The laboratory reported allyl chloride, which according to the analytical SOW was not a required volatile target compound. Because allyl chloride is an Appendix IX compound it was determined that this compound should remain in the database.

The laboratory reported Dinoseb, a,a-dimethylphenethylamine, chlorobenzilate, diallate, and N-nitrosopiperidine, which according to the analytical SOW were not required semivolatile target compounds. Because the aforementioned are Appendix IX compounds it was determined that these compounds should remain in the database.

The laboratory did not report hexachlorophene as requested in the analytical SOW. This compound is unstable and could not be analyzed.

Executive Summary

Laboratory Performance: Several compounds were qualified due to calibration noncompliances. Several compounds were present in the laboratory method blanks.

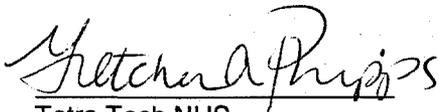

Other Factors Affecting Data Quality: Several compounds were present in the trip blanks. Hexachlorocyclopentadiene and dimethyl phthalate were qualified due to Blank Spike / Blank Spike Duplicate %Rs <10% and Matrix Spike / Matrix Spike Duplicate %Rs <10%. Sample MPT-G4-GW-44-04 was qualified due to surrogate recoveries.

MEMO TO: T. HANSEN
DATE: NOVEMBER 10, 2000

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99), and the NFESC guidelines "Navy Installation Restoration Chemical Data Quality Manual" (9/99). The text of this report has been formulated to address only those problem areas affecting data quality.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Data
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCD% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop

MEMO TO: T. HANSEN
DATE: NOVEMBER 10, 2000

- * • Detection Limits
- * - All quality control criteria were met for this parameter.

Volatiles

All initial and continuing calibration RRFs for acrolein, acetonitrile and isobutyl alcohol were <0.05 quality control limit affecting all samples. The nondetected results reported for the above listed compounds were qualified as rejected, "UR". No positive results were reported for these compounds.

The initial calibration %RSDs for acetone was >30% but <50% quality control limit affecting the samples analyzed on instrument A3UX7. The positive results reported for acetone in the trip blanks were qualified as estimated, "J". All other results reported for acetone in the affected samples were qualified due to blank contamination. Therefore, no validation action was taken on this basis.

The continuing calibration %Ds for acrolein and vinyl acetate were >25% quality control limit affecting the samples analyzed on instrument A3UX7 on July 14. Only nondetected results were reported for vinyl acetate in the affected samples and these were qualified as estimated, "UJ". All results reported for acrolein were rejected due to initial calibration RRF <0.05. Therefore, no further validation action was taken on this basis.

The continuing calibration %Ds for acetone and isobutyl alcohol were >25% quality control limit affecting the samples analyzed on instrument A3UX7 on July 17. The nondetected results reported for isobutyl alcohol in the affected samples were rejected due to initial calibration noncompliances. All results reported for acetone in the affected samples were qualified due to blank contamination. Therefore, no further validation action for either compound was taken on this basis.

The initial calibration %RSD for acetone was >30% but <50% quality control limit affecting the samples analyzed on instrument A3UX10. All results reported for acetone in the affected samples were qualified due to blank contamination. Therefore, no validation action was taken on this basis.

The following compounds were detected in the laboratory method blanks / trip blanks at the following maximum concentrations:

<u>Compound</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
2-Butanone ⁽¹⁾	39 µg/L	390 µg/L
2-Hexanone ⁽¹⁾	5.3 µg/L	26.5 µg/L
Acetone ⁽¹⁾	81 µg/L	810 µg/L
Benzene	0.099 µg/L	0.495 µg/L
Chloromethane ⁽¹⁾	0.73 µg/L	3.65 µg/L
Methylene chloride	0.44 µg/L	4.4 µg/L
Toluene ⁽¹⁾	0.28 µg/L	1.4 µg/L

⁽¹⁾ Maximum concentration present in a trip blank.

An action level of 5 to 10X the maximum concentration was used to evaluate samples for blank contamination. The positive results less than the blank action level for 2-butanone, acetone, benzene, chloromethane, methylene chloride and toluene were qualified, "U", as a result of blank contamination. It should be noted the field quality control blanks are not qualified based on method blank contamination or contamination in other field quality control blanks.

SUPPORT DOCUMENTATION

SDG NARRATIVE

MP019

The following report contains the analytical results for nineteen water samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV Site, project number N0123. The samples were received July 8, 11, and 12, 2000, according to documented sample acceptance procedures.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

Coolers were received at the laboratory at temperatures of 2.1, 2.4, 2.4, 3.0, and 1.2.

(See STL's Cooler Receipt Form for additional information.)

SAMPLE SUMMARY

A0G110125

<u>WO #</u>	<u>SAMPLE#</u>	<u>CLIENT SAMPLE ID</u>	<u>DATE</u>	<u>TIME</u>
DG0TK	001	MPT-G4-GW-41-06	07/10/00	11:50
DG0TV	002	MPT-G4-GW-42-04	07/10/00	14:30

DG0V1	005	TB071000	07/10/00	

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SDG NARRATIVE

MP019

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

The reporting limit is lower than our standard reporting limit (SRL) but is supported by the laboratory's MDL and/or IDLs; however, there are no standards in the calibration curve low enough to support this value. The continuing calibration blanks and method blanks may not support the lower RL.

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Benzene, Methylene chloride, and Toluene were detected in the method blank for batch 0199127. These are common laboratory contaminants with concentrations less than five times the reporting limit. All affected sample results are qualified with "B".

Acetone, Methylene chloride, and Toluene were detected in the method blank for batch 0200179. These are common laboratory contaminants with concentrations less than five times the reporting limit. All affected sample results are qualified with "B".

Acetone and Methylene chloride were detected in the method blank for batch 0201165. These are common laboratory contaminants with concentrations less than five times the reporting limit. All affected sample results are qualified with "B".

Acetone and Benzene were detected in the method blank for batch 0200218. These are common laboratory contaminants with concentrations less than five times the reporting limit. All affected sample results are qualified with "B".

SDG NARRATIVE

MP019

GC/MS VOLATILES (continued)

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The initial calibration check for instrument UX7 on July 14, 2000 was outside acceptable limits for 2-Hexanone. This compound has poor purging efficiency; therefore, the initial calibration was accepted.

SDG NARRATIVE

MP019

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Sample MPT-G4-GW-44-04 had surrogate recoveries outside acceptance limits. Upon re-extraction and reanalysis, all surrogates were within acceptance limits, however recommended holding time had been exceeded.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Bis(2-Ethylhexyl) phthalate was detected in the method blank for batch 0200218. All affected sample results are qualified with "B".

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

The MS/MSD for batch 0192223 had RPD's and/or recoveries outside acceptance limits. However, since the associated method blank and check were in control, no corrective action was necessary.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SEMIVOLATILE ORGANIC GC/MS TUNING AND MASS
CALIBRATION - DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: STL - NORTH CANTON Contract:
 Lab Code: QESOH Case No.: SAS No.: SDG No.: MP019
 Lab File ID: 7DF0720A DFTPP Injection Date: 07/20/00
 Instrument ID: A4HP7 DFTPP Injection Time: 1020

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	47.0
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	78.2
70	Less than 2.0% of mass 69	0.7 (0.9)1
127	40.0 - 60.0% of mass 198	50.9
197	Less than 1.0% of mass 198	0.1
198	Base Peak, 100% relative abundance	100.0
199	5.0 - 9.0% of mass 198	7.5
275	10.0 - 30.0% of mass 198	28.4
365	Greater than 1.0% of mass 198	3.1
441	Present, but less than mass 443	12.0
442	40.0 - 100.0% of mass 198	89.6
443	17.0 - 23.0% of mass 442	15.8 (17.6)2

1-Value is % of mass 69 2-Value is % of mass 442

SEMIVOLATILE ORGANIC GC/MS TUNING AND MASS
CALIBRATION - DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: STL - NORTH CANTON Contract:
 Lab Code: QESOH Case No.: SAS No.: SDG No.: MP019
 Lab File ID: 7DF0727A DFTPP Injection Date: 07/27/00
 Instrument ID: A4HP7 DFTPP Injection Time: 0809

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	49.1
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	74.1
70	Less than 2.0% of mass 69	0.6 (0.8)1
127	40.0 - 60.0% of mass 198	51.8
197	Less than 1.0% of mass 198	0.2
198	Base Peak, 100% relative abundance	100.0
199	5.0 - 9.0% of mass 198	7.4
275	10.0 - 30.0% of mass 198	28.0
365	Greater than 1.0% of mass 198	2.6
441	Present, but less than mass 443	11.1
442	40.0 - 100.0% of mass 198	73.4
443	17.0 - 23.0% of mass 442	13.4 (18.3)2

1-Value is % of mass 69 2-Value is % of mass 442

 DATE: APRIL 6, 2001

These data were evaluated based on the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Calibration Recoveries
- Laboratory Blank Analyses
- * • Laboratory Control Sample Results
- * • ICP Interference Check Sample Results
- Matrix Spike / Matrix Spike Duplicate Recoveries
- MS/MSD Relative Percent Differences
- ICP Serial Dilution Results
- * • Sample Quantitation
- * • Detection Limits

* - All quality control criteria were met for this parameter.

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method / preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level (aqueous)	Action Level (SPLP)	Action Level (soil)
Aluminum	33.3 µg/L	166.5 µg/L	NA	16.65 mg/kg
Aluminum ⁽²⁾	57.5 µg/L	NA	287.5 µg/L	NA
Barium	0.6 µg/L	3.0 µg/L	NA	0.3 mg/kg
Barium ⁽²⁾	4.6 µg/L	NA	23.0 µg/L	NA
Beryllium	0.3 µg/L	1.5 µg/L	1.5 µg/L	0.15 mg/kg
Cadmium	0.3 µg/L	1.5 µg/L	1.5 µg/L	0.15 mg/kg
Calcium	64.1 µg/L	320.5 µg/L	NA	NA
Calcium ⁽²⁾	293 µg/L	NA	1465 µg/L	NA
Calcium ⁽³⁾	12.5 mg/kg	NA	NA	62.5 mg/kg
Copper ⁽²⁾	1.1 µg/L	NA	5.5 µg/L	NA
Iron	26.9 µg/L	134.5 µg/L	NA	13.45 mg/kg
Iron ⁽²⁾	28.1 µg/L	NA	140.5 µg/L	NA
Lead	2.0 µg/L	10.0 µg/L	10.0 µg/L	1.0 mg/kg
Magnesium	38.1 µg/L	190.5 µg/L	NA	19.05 mg/kg
Magnesium ⁽²⁾	57.7 µg/L	NA	288.5 µg/L	NA
Manganese	1.0 µg/L	5.0 µg/L	NA	NA
Manganese ⁽²⁾	4.0 µg/L	NA	20.0 µg/L	NA
Manganese ⁽³⁾	0.15 mg/kg	NA	NA	0.75 mg/kg
Nickel ⁽²⁾	3.2 µg/L	NA	16.0 µg/L	NA
Potassium	235 µg/L	1175 µg/L	NA	117.5 mg/kg
Potassium ⁽²⁾	279 µg/L	NA	1395 µg/L	NA
Sodium ⁽²⁾	405 µg/L	NA	2025 µg/L	NA
Selenium	4.4 µg/L	22.0 µg/L	NA	2.2 mg/kg
Selenium ⁽²⁾	5.4 µg/L	NA	27.0 µg/L	NA
Tin ⁽³⁾	1.3 mg/kg	NA	NA	6.5 mg/kg
Zinc ⁽¹⁾	2.5 µg/L	12.5 µg/L	NA	NA
Zinc ⁽²⁾	18.2 µg/L	NA	91.0 µg/L	NA
Zinc ⁽³⁾	1.4 mg/kg	NA	NA	7.0 mg/kg

⁽¹⁾ Maximum concentration present in an aqueous preparation blank.

⁽²⁾ Maximum concentration present in a leachate blank.

⁽³⁾ Maximum concentration present in a soil preparation blank.

TO: T. HANSEN – PAGE 3
DATE: APRIL 6, 2001

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent moistures and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action levels for aluminum, barium, beryllium, cadmium, lead, manganese, nickel, potassium, selenium, tin and zinc were qualified, "U", as a result of blank contamination.

Matrix Spike and Matrix Spike Duplicate Results

The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Percent Recoveries (%Rs) were < 75% quality control limit for antimony, affecting the SPLP matrix. All nondetected results reported for antimony were qualified as estimated, "UJ".

The MS and MSD %Rs were < 75% quality control limit for calcium, affecting the soil matrix. All positive results reported for calcium were qualified as estimated, "J".

The MSD percent recoveries were < 75% quality control limit for antimony and copper, affecting the soil matrix. All nondetected results reported for antimony were qualified as estimated, "UJ". All positive results reported for copper were qualified as estimated, "J".

The MS and MSD recoveries were both above and below the 75-125% quality control limits for aluminum, affecting the soil matrix. All positive results reported for aluminum were qualified as estimated, "J".

Notes

The MS/MSD RPDs for aluminum and calcium were >35% quality control limit, affecting the soil matrix. Validation action was not taken based on the MS/MSD comparison.

The MSD %R for tin was < 75% quality control limit, affecting the soil matrix. All results reported for tin were qualified "U" as a result of laboratory blank contamination; therefore, no further qualification was necessary.

The ICP serial dilution percent difference for zinc was >10% quality control limit, affecting the soil matrix. All results reported for zinc were qualified "U" as a result of laboratory blank contamination; therefore, no further qualification was necessary.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

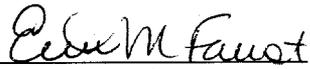

Other Factors Affecting Data Quality: Aluminum, antimony, calcium and copper were qualified due to MS and/or MSD noncompliance in the soil samples. Antimony was qualified due to MS/MSD noncompliance in the SPLP samples.

DATE: APRIL 6, 2001

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCD% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

VOLATILE FRACTION

The initial calibration on 02/21/01 contained relative response factors (RRFs) that were below the 0.05 quality control limit for acrolein, propionitrile, acetonitrile, and isobutanol. Only nondetected results were reported and rejected (UR) in the solid samples.

The continuing calibration on 03/13/01 at 0611 contained relative response factors (RRFs) that were less than the 0.05 quality control limit acrolein, propionitrile, acetonitrile, and isobutanol. Only nondetected results were reported and rejected (UR) in the solid samples.

The blank spike and blank spike duplicate for the solid samples contained percent recoveries (%Rs) that were greater than the quality control limits for acetone and 2-hexanone. No action was taken based on blank spike and blank spike duplicate noncompliance.

The aqueous sample TB03050101 was not preserved at a pH of 2 or less. However, the sample was analyzed within seven days from the sample collection date; therefore, no action was taken on this basis.

The initial calibration on 01/08/01 contained relative response factors (RRFs) that were below the 0.05 quality control limit for acetonitrile, acrolein, propionitrile, and isobutanol. Only nondetected results were reported for these compounds and rejected (UR) in the aqueous samples.

The continuing calibration on 03/13/01 at 0826 contained a RRF that was below the 0.05 quality control limit for acrolein and acetonitrile. Only nondetected results were reported for these compounds and rejected (UR) in the aqueous samples.

The continuing calibration on 03/13/01 at 0850 contained RRFs that were below the 0.05 quality control limit for isobutanol and propionitrile. Only nondetected results were reported for this compound and rejected (UR) in the aqueous samples.

The blank spike and blank spike duplicate associated with the aqueous samples contained %Rs that were greater than the quality control limits for trans-1,3-dichloropropene. No action was taken based on blank spike and blank spike duplicate noncompliance.

The Matrix spike %R of sample MPT-G4-GW66-05 was greater than the upper control limit for trans-1,3-dichloropropene. No action was taken for matrix spike noncompliance.

SEMIVOLATILE FRACTION

The initial calibration on 03/06/01 contained RRFs that were less than the 0.05 quality control limit for 4-nitroquinoline-1-oxide. The nondetected results were rejected (UR) in the solid samples.

The continuing calibration on 03/15/01 at 0859 contained a percent difference (%D) that exceeded the 25% quality control limits for 2,4-dinitrophenol. Nondetected results were reported for these compounds and qualified as estimated (UJ) in the solid samples.

The initial calibration on 03/16/01 contained a percent relative standard deviation (%RSD) that was >30% but <50% for Famphur. No action was taken because only nondetected results were reported, and the %RSDs were <50% for this compound.

The continuing calibration on 03/15/01 at 0927 contained %Ds that exceeded the 25% quality control limit for a,a-Dimethyl-phenethylamine, p-Phenylene diamine, and 7,12-dimethylbenz(a) anthracene. Nondetected results were reported for this compound and qualified as estimated (UJ) in the aqueous samples.

MEMO TO: MR. T. HANSEN
DATE: 05/22/01- PAGE 3

The continuing calibration on 03/16/01 at 1257 contained a %D that exceeded the 25% quality control limit for methapyrilene. Nondetected results were reported for this compound and qualified as estimated (UJ) in the aqueous samples.

The blank spike associated with the aqueous samples contained a %R that was less than 10% for hexachlorocyclopentadiene. The aforementioned compound was rejected, UR, in the aqueous samples.

ADDITIONAL COMMENTS

Several samples contained positive results for compounds below the reporting limits (RL) in the volatile fraction. These results were qualified as estimated (J).

The recovery of the surrogates was poor in the blank spike, matrix spike, and matrix spike duplicate for the semivolatile (acid) fraction. No action was required.

EXECUTIVE SUMMARY

Laboratory Performance: Several compounds exceeded the initial and/or continuing calibration criteria in the volatile and semivolatile fraction. The surrogate percent recoveries were less than the lower quality control limits in the semivolatile (acid) fraction.

Other Factors Affecting Data Quality: None

MEMO TO: MR. T. HANSEN
DATE: 05/22/01- PAGE 4

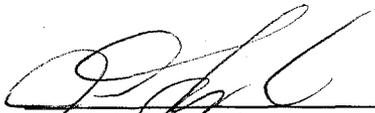

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October 1999), and the NFESC guidelines "Navy IRCDQM" (September 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCD% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

SDG NARRATIVE

MP038

The following report contains the analytical results for three water samples and two solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport – Group IV site, project number N0123. The samples were received March 7, 2001, according to documented sample acceptance procedures.

This SDG consists of one (1) laboratory IDs: A1C090105.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the cooler upon sample receipt was 2.8° C. The samples were received in wet ice.

See STL's Cooler Receipt Form for additional information.

1. Were custody seals on the outside of the cooler and intact? Yes No
 If YES, Quantity 1 Location side of cooler
 Were the custody seals signed and dated? Yes No NA
 2. Shipper's packing slip attached to this form? Yes No
 3. Were custody papers included inside the cooler and relinquished? Yes No
 4. Did you sign the custody papers in the appropriate place? Yes No
 5. Packing material used:
 Peanuts Bubble Wrap Vermiculite Foam None Other: _____
 6. Cooler temperature upon receipt 2.8 °C (see back of form for multiple coolers/temp)
 METHOD: Temperature Vial Between Coolant & Sample Container Against Bottles
 COOLANT: Wet Ice Blue Ice Dry Ice Water None
 7. Were all the bottles sealed in separate plastic bags? Yes No
 8. Did all bottles arrive in good condition (Unbroken)? Yes No
 9. Did all bottle labels and tags agree with the custody papers? Yes No
 10. Were samples at the correct pH? Yes No NA
 11. Were correct bottles used for the tests indicated? Yes No NA
 12. Were air bubbles >6 mm in any VOA vials? Yes No NA
 13. Was a sufficient amount of sample sent in each bottle? Yes No
- Contacted PM DJP Date: 3/7/01 by: TB via Voice Mail Verbal Other
 Concerning: trip blanks - OK to log - See E-mail

MACRO | MACRO

1. CHAIN OF CUSTODY

SR1A	Samples were received under proper custody procedures and without discrepancies.
SR1B	The chain of custody and sample bottles did not agree. The following discrepancies occurred <u>2x40 trip blank not on COC - DJP aware - TB 3/7/01</u>

2. SAMPLE CONDITION

SR2A	Sample(s) _____ were received or requested after the recommended holding time had expired.
SR2B	Sample(s) _____ were received with insufficient volume
SR2C	Sample(s) _____ were received in a broken container.

3. SAMPLE PRESERVATION

SR3A	Sample(s) _____ were further preserved in sample receiving to meet recommended pH level(s).
SR3B	Sample(s) _____ were received with bubble > 6 mm in diameter (cc: PM)

4. NCM

SR4A NCM has been generated. Refer to Clouseau for details

5. Other Anomalies (see below or back)

QUALITY CONTROL ELEMENTS OF SW-846 METHODS

STL North Canton conducts a quality assurance/quality control (QA/QC) program designed to provide scientifically valid and legally defensible data. Toward this end, several types of quality control indicators are incorporated into the QA/QC program, which is described in detail in QA Policy, QA-003. These indicators are introduced into the sample testing process to provide a mechanism for the assessment of the analytical data.

QC BATCH

Environmental samples are taken through the testing process in groups called QUALITY CONTROL BATCHES (QC batches). A QC batch contains up to twenty environmental samples of a similar matrix (water, soil) that are processed using the same reagents and standards. STL North Canton requires that each environmental sample be associated with a QC batch.

Several quality control samples are included in each QC batch and are processed identically to the twenty environmental samples. These QC samples include a METHOD BLANK (MB), a LABORATORY CONTROL SAMPLE (LCS) and, where appropriate, a MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) pair or a MATRIX SPIKE/SAMPLE DUPLICATE (MS/DU) pair. If there is insufficient sample to perform an MS/MSD or an MS/DU, then a LABORATORY CONTROL SAMPLE DUPLICATE (LCSD) is included in the QC batch.

LABORATORY CONTROL SAMPLE

The Laboratory Control Sample is a QC sample that is created by adding known concentrations of a full or partial set of target analytes to a matrix similar to that of the environmental samples in the QC batch. The LCS analyte recovery results are used to monitor the analytical process and provide evidence that the laboratory is performing the method within acceptable guidelines. All control analytes indicated by a bold type in the LCS must meet acceptance criteria. Failure to meet the established recovery guidelines requires the reparation and reanalysis of all samples in the QC batch. The only exception is that if the LCS recoveries are biased high and the associated sample is ND for the parameter(s) of interest, the batch is acceptable.

At times, a Laboratory Control Sample Duplicate (LCSD) is also included in the QC batch. An LCSD is a QC sample that is created and handled identically to the LCS. Analyte recovery data from the LCSD is assessed in the same way as that of the LCS. The LCSD recoveries, together with the LCS recoveries, are used to determine the reproducibility (precision) of the analytical system. Precision data are expressed as relative percent differences (RPDs). If the RPD fails for an LCS/LCSD and yet the recoveries are within acceptance criteria, the batch is still acceptable.

METHOD BLANK

The Method Blank is a QC sample consisting of all the reagents used in analyzing the environmental samples contained in the QC batch. Method Blank results are used to determine if interference or contamination in the analytical system could lead to the reporting of false positive data or elevated analyte concentrations. All target analytes must be below the reporting limits (RL) or the associated sample(s) must be ND except under the following circumstances:

- Common organic contaminants may be present at concentrations up to 5 times the reporting limits. Common metals contaminants may be present at concentrations up to 2 times the reporting limit, or the reported blank concentration must be twenty fold less than the concentration reported in the associated environmental samples. (See common laboratory contaminants listed below.)

Volatile (GC or GC/MS)

Methylene chloride
Acetone
2-Butanone

Semivolatile (GC/MS)

Phthalate Esters

Metals

Copper
Iron
Zinc
Lead*

* for analyses run on TJA Trace ICP or GFAA only

QUALITY CONTROL ELEMENTS OF SW-846 METHODS (Continued)

- Organic blanks will be accepted if compounds detected in the blank are present in the associated samples at levels 10 times the blank level. Inorganic blanks will be accepted if elements detected in the blank are present in the associated samples at 20 times the blank level.
- Blanks will be accepted if the compounds/elements detected are not present in any of the associated environmental samples.

Failure to meet these Method Blank criteria requires the repreparation and reanalysis of all samples in the QC batch.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE

A Matrix Spike and a Matrix Spike Duplicate are a pair of environmental samples to which known concentrations of a full or partial set of target analytes are added. The MS/MSD results are determined in the same manner as the results of the environmental sample used to prepare the MS/MSD. The analyte recoveries and the relative percent differences (RPDs) of the recoveries are calculated and used to evaluate the effect of the sample matrix on the analytical results. Due to the potential variability of the matrix of each sample, the MS/MSD results may not have an immediate bearing on any samples except the one spiked; therefore, the associated batch MS/MSD may not reflect the same compounds as the samples contained in the analytical report. When these MS/MSD results fail to meet acceptance criteria, the data is evaluated. If the LCS is within acceptance criteria, the batch is considered acceptable. The acceptance criteria do not apply to samples that are diluted for organics if the native sample amount is 4x the concentration of the spike.

For certain methods, a Matrix Spike/Sample Duplicate (MS/DU) may be included in the QC batch in place of the MS/MSD. For the parameters (i.e. pH, ignitability) where it is not possible to prepare a spiked sample, a Sample Duplicate may be included in the QC batch. However, a Sample Duplicate is less likely to provide usable precision statistics depending on the likelihood of finding concentrations below the standard reporting limit. When the Sample Duplicate result fails to meet acceptance criteria, the data is evaluated.

SURROGATE COMPOUNDS

In addition to these batch-related QC indicators, each organic environmental and QC sample are spiked with surrogate compounds. Surrogates are organic chemicals that behave similarly to the analytes of interest and that are rarely present in the environment. Surrogate recoveries are used to monitor the individual performance of a sample in the analytical system.

If the surrogate recoveries are outside criteria for environmental or MS/MSD samples, the batch is acceptable if the Method Blank, LCS, and LCSD surrogate recoveries are within acceptance criteria. The only exception is if the surrogate recoveries are biased high in the LCS, LCSD, or the Method Blank and the associated sample(s) are ND, the batch is acceptable. If the LCS, LCSD, or Method Blank surrogate(s) fail to meet recovery criteria, the entire sample batch is reprepared and reanalyzed.

For the GC/MS BNA methods, the surrogate criterion is that two of the three surrogates for each fraction must meet acceptance criteria. The third surrogate must have a recovery of ten percent or greater.

For the Pesticide/PCB, PAH, and Herbicide methods, the surrogate criteria is that one of two surrogate compounds meet acceptance criteria.

SDG NARRATIVE

MP038

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the MDL and the RL were flagged with "J". There is the possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

The pH of the sample TB03050101 was greater than 2. The sample was analyzed within the normal 14 day holding time; however, experimental evidence suggests that some aromatic compounds in wastewater samples, notably Benzene, Toluene, and Ethylbenzene are susceptible to biological degradation if samples are not preserved to a pH of 2.

The solid samples in this lot were preserved by freezing in water due to samples effervescing when preserved with sodium bisulfate.

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

VOLATILE ORGANIC GC/MS TUNING AND MASS
CALIBRATION - BROMOFLUOROBENZENE (BFB)

Lab Name: STL - NORTH CANTON Contract:
 Lab Code: QESOH Case No.: SAS No.: SDG No.: MP038
 Lab File ID: BFB362 BFB Injection Date: 02/21/01
 Instrument ID: A3UX9 BFB Injection Time: 1008
 Matrix: (soil/water) SOIL Level: (low/med) LOW Column: (pack/cap) CAP

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	17.3
75	30.0 - 60.0% of mass 95	44.1
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	7.0
173	Less than 2.0% of mass 174	0.5 (0.6)1
174	50.0 - 120.0% of mass 95	92.5
175	5.0 - 9.0% of mass 174	6.0 (6.5)1
176	Greater than 95.0%, but less than 101.0% of mass 174	88.2 (95.3)1
177	5.0 - 9.0% of mass 176	6.5 (7.4)2

1-Value is % of mass 174 2-Value is % of mass 176

VOLATILE ORGANIC GC/MS TUNING AND MASS
CALIBRATION - BROMOFLUOROBENZENE (BFB)

Lab Name: STL - NORTH CANTON Contract:
 Lab Code: QESOH Case No.: SAS No.: SDG No.: MP038
 Lab File ID: BFB703 BFB Injection Date: 03/13/01
 Instrument ID: A3UX7 BFB Injection Time: 0810
 Matrix: (soil/water) WATER Level: (low/med) LOW Column: (pack/cap) CAP

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	17.4
75	30.0 - 60.0% of mass 95	44.8
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	6.7
173	Less than 2.0% of mass 174	0.3 (0.3)1
174	50.0 - 120.0% of mass 95	82.4
175	5.0 - 9.0% of mass 174	5.8 (7.0)1
176	Greater than 95.0%, but less than 101.0% of mass 174	80.3 (97.3)1
177	5.0 - 9.0% of mass 176	6.0 (7.4)2

1-Value is % of mass 174 2-Value is % of mass 176

**SDG NARRATIVE
MP038**

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SEMIVOLATILE ORGANIC GC/MS TUNING AND MASS
CALIBRATION - DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: STL - NORTH CANTON

Contract:

Lab Code: QESOH

Case No.:

SAS No.:

SDG No.: MP038

Lab File ID: 8DF0316

DFTPP Injection Date: 03/16/01

Instrument ID: A4HP8

DFTPP Injection Time: 0912

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	42.6
68	Less than 2.0% of mass 69	0.5 (0.8)1
69	Mass 69 relative abundance	62.1
70	Less than 2.0% of mass 69	0.0 (0.0)1
127	40.0 - 60.0% of mass 198	50.1
197	Less than 1.0% of mass 198	0.3
198	Base Peak, 100% relative abundance	100.0
199	5.0 - 9.0% of mass 198	7.0
275	10.0 - 30.0% of mass 198	25.0
365	Greater than 1.0% of mass 198	3.8
441	Present, but less than mass 443	9.8
442	Greater than 40.0% of mass 198	64.7
443	17.0 - 23.0% of mass 442	12.9 (19.9)2

1-Value is % of mass 69

2-Value is % of mass 442

Overview

The sample set for CTO 091, NS Mayport, SDG MP014, consists of eighteen (18) soil environmental samples. One (1) field duplicate pair (MPT-G4-SU-17-08 / MPT-G4-SU-DU01) was included within this SDG.

The samples were analyzed for target analyte list (TAL) metals, tin and cyanide. The samples were collected by Tetra Tech NUS on June 26-29, 2000 and analyzed by Severn Trent Laboratories under Naval Facilities Engineering Service Center (NFESC) Quality Assurance / Quality Control (QA/QC) criteria. Metals analyses, with the exception of mercury, were conducted using SW 846 method 6010B. Mercury analyses were conducted using SW 846 method 7471A. Cyanide analyses were conducted using SW 846 method 9012A.

The data was evaluated based on the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Calibration Verifications
- Laboratory Blank Analyses
- ICP Interference Check Sample Results
- Matrix Spike / Matrix Spike Duplicate Results
- * • Laboratory Duplicate Results
- * • ICP Serial Dilution Results
- Field Duplicate Results
- * • Sample Quantitation
- * • Detection Limits

- * - All quality control criteria were met for this parameter.

MEMO TO: T. HANSEN - PAGE 2
DATE: DECEMBER 7, 2000

Laboratory Blanks

The following contaminants were detected in the laboratory method / preparation quality control blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Antimony	4.5 µg/L	2.25 mg/kg
Barium ⁽¹⁾	0.2 mg/kg	1.0 mg/kg
Beryllium	0.7 µg/L	0.35 mg/kg
Cadmium	0.3 µg/L	0.15 mg/kg
Calcium ⁽¹⁾	40.2 mg/kg	201 mg/kg
Chromium ⁽¹⁾	0.11 mg/kg	0.55 mg/kg
Iron	26.1 µg/L	13.05 mg/kg
Magnesium	51.9 µg/L	25.95 mg/kg
Manganese ⁽¹⁾	0.10 mg/kg	0.50 mg/kg
Potassium ⁽¹⁾	3.1 mg/kg	15.5 mg/kg
Sodium ⁽¹⁾	176 mg/kg	880 mg/kg
Vanadium	0.8 µg/L	0.4 mg/kg
Zinc ⁽¹⁾	1.1 mg/kg	5.5 mg/kg
Tin ⁽¹⁾	1.7 mg/kg	8.5 mg/kg

(1) Maximum concentration present in a soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot, percent solids and dilution factors were taken into consideration when evaluation for blank contamination. Positive results less than the blank action level for antimony, beryllium, cadmium, calcium, magnesium, potassium, sodium, zinc and tin were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as all results reported for the remaining analytes were either nondetected or greater than the blank action level.

ICP Interference Check Sample Results

The interfering analyte calcium was present in sample MPT-G4-SU-02-05 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, manganese, nickel, potassium, sodium and zinc in the affected sample. The positive results reported for chromium, cobalt, copper, manganese, nickel, potassium and zinc were qualified as estimated, "J". The nondetected result reported for sodium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-G4-SU-06-07 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, copper, manganese, nickel, potassium, sodium and vanadium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-08-04 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution.

MEMO TO: T. HANSEN - PAGE 3
DATE: DECEMBER 7, 2000

Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, manganese, nickel, potassium, vanadium and zinc in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-09-11 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, manganese, nickel, potassium, sodium and vanadium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-11-06 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, nickel, vanadium and zinc in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-13-06 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, nickel and zinc in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-14-09 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for cobalt, copper, nickel and vanadium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-15-08 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, nickel and vanadium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-16-09 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for cobalt, copper, nickel, sodium and vanadium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

MEMO TO: T. HANSEN - PAGE 4
DATE: DECEMBER 7, 2000

The interfering analyte calcium was present in sample MPT-G4-SU-17-08 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper, nickel and selenium in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-G4-SU-DU01 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for chromium, cobalt, copper and nickel in the affected sample. The positive results reported for the above listed compounds were qualified as estimated, "J".

The interfering analyte calcium was present in samples MPT-G4-SU-05-04 and MPT-G4-SU-12-06 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, manganese, nickel, potassium, selenium, sodium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for cobalt, copper, nickel and zinc in the affected samples. The positive results reported for the above listed compounds were qualified as estimated, "J".

Matrix Spike / Matrix Spike Duplicate Results

The Matrix Spike / Matrix Spike Duplicate (MS/MSD) Percent Recoveries (%Rs) for aluminum and iron were >125% quality control limit. The positive results reported for aluminum and iron were qualified as estimated, "J".

Field Duplicate Results

Field duplicate imprecision (RPD >50% for results >5X CRDL) was noted for aluminum, iron and manganese. The positive results reported for aluminum, iron and manganese were qualified as estimated, "J".

Notes

Sample MPT-G4-SU-01-07 was mislabeled by the laboratory as MPT-G4-SU-08. The Form 1s were corrected by the data reviewer.

As noted on the Case Narrative, cyanide analyses on several samples were not prepared in accordance with the laboratory Standard Operating Procedures (SOPs). No validation action was taken on this basis.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

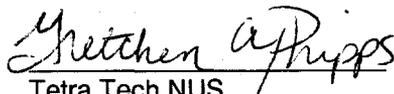

Other Factors Affecting Data Quality: The interfering analyte calcium was present in some samples. Aluminum and iron were qualified due to MS noncompliances. Aluminum, iron and manganese were qualified due to field duplicate imprecision.

MEMO TO: T. HANSEN - PAGE 5
DATE: DECEMBER 7, 2000

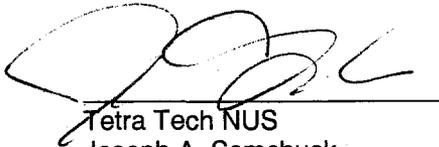

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy Installation Restoration Chemical Data Quality Manual." (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Data
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Regional Guidelines
4. Appendix D - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCD% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop

APPENDIX C
SUPPORT DOCUMENTATION

SDG NARRATIVE

MP014

The following report contains the analytical results for nineteen solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV Site. The samples were received June 28, 29, and 30, 2000, according to documented sample acceptance procedures.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

Coolers were received at the laboratory at temperatures of 0.4, 2.6, 2.6, 1.9, 2.2, and 3.0.

(See STL's Cooler Receipt Form for additional information.)

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SDG NARRATIVE

MP014

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the IDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Serial dilution of a sample in this lot indicates that physical and chemical interferences were present. Refer to the sample report pages for the affected analytes.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Version 3.63.6 Beta

- U Result is less than the IDL
- B Result is between IDL and RL
- N Spike recovery failed
- NC Percent recovery was not calculated
- Duplicate analysis RPD was not within limits

SDG NARRATIVE
MP014

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples MPT-G4-SU-14-09, MPT-G4-SU-15-08, MPT-G4-SU-16-09, MPT-G4-SU-17-08, and MPT-G4-SU-DU01 for batch 0195327 were not prepped with the Magnesium Chloride reagent as stated in the SOP.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS/Sample Duplicate Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

MEMO TO: TERRY HANSEN
DATE: NOVEMBER 16, 2000 – PAGE 2

- * • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified analytical results are presented in Appendix A.

VOLATILE FRACTION

The following compound was detected in the laboratory method blank at the maximum concentration indicated below:

<u>Compound</u>	<u>Concentration</u>	<u>Soil Action Level</u>
Methylene chloride	2.0 µg/kg	20.0 µg/kg

Blank Actions

- Value < Contract Required Quantitation Limit (CRQL); report CRQL followed by a U.
- Value > CRQL and < Action level; report value followed by a U.
- Value > CRQL and > action level; report value unqualified.

Dilution factors, percent moisture, and sample aliquots were taken into consideration during the application of all action levels. The positive results were qualified as (U) as a result of blank contamination for methylene chloride.

The initial and continuing calibration Relative Response Factors (RRFs) were below the 0.05 quality control limit for acrolein, acetonitrile, and isobutyl alcohol. Only nondetected results were reported for these compounds and these were qualified as rejected (UR), in all samples.

The continuing calibration Percent Differences (%Ds) exceeded the 25% quality control limit for vinyl acetate, methacrylonitrile, isobutyl alcohol, and methyl methacrylate. Only nondetected results were reported for these compounds and these results were qualified as estimated (UJ). All results for isobutyl alcohol were rejected and did not require further qualification.

The continuing calibration RRFs were below the 0.05 quality control limit for propionitrile on 7/5/00. Only nondetected results were reported for these compounds and these were qualified as rejected (UR), in samples MPT-G4-SU-13-06, MPT-G4-SU-14-09, MPT-G4-SU-15-08, MPT-G4-SU-16-09, and MPT-G4-SU-17-08.

The Matrix Spike/Matrix Spike Duplicate (MS/MSD) Relative Percent Difference (RPD) exceeded the upper control limits for several compounds. No action was warranted based on MS/MSD noncompliances alone.

MS/MSD and Laboratory Control Sample (LCS) Percent Recoveries (%Rs) were outside the lower and upper control limits, respectively, for several compounds. No action was warranted based on MS/MSD or LCS noncompliances alone.

SEMIVOLATILE FRACTION

Initial and continuing calibration RRFs were below the quality control limit for 4-nitroquinoline-1-oxide. Only nondetected results were reported for this compound and these were qualified as rejected (UR).

MEMO TO: TERRY HANSEN
DATE: NOVEMBER 16, 2000 – PAGE 3

The initial calibration %RSD was >30% but <50% for 4-nitroquinoline-1-oxide. No action was warranted based on only nondetected results were reported, and the %RSD was <50% for this compound.

The continuing calibration %Ds exceeded the 25% quality control limits from 7/13/00 to 7/16/00 for 2,4-dinitrophenol, 1,4-dioxane, 4-nitroaniline, dinoseb, 4-nitroquinoline-1-oxide, and 3-methylchloanthrene. Only nondetected results were reported for these compounds and these results were qualified as estimated (UJ).

The continuing calibration %Ds exceeded the 25% quality control limits on 7/9/00 for a,a-dimethylphenethylamine. Only nondetected results were reported for this compound and these were qualified as estimated (UJ).

The continuing calibration %Ds exceeded the 25% quality control limits on 7/13/00 for 3,3'-dimethylbenzidine. Only nondetected results were reported for this compound and these were qualified as estimated (UJ).

The initial calibration %RSD was >30% but <50% for 2-acetylaminofluorene. No action was warranted based on only nondetected results were reported, and the %RSD was <50% for this compound.

The LCS %R exceeded the upper control limit for 2,4-dinitrotoluene. No action was warranted based on LCS noncompliances alone.

The LCS %R was below the lower control limit for 4-chloroaniline. No action was warranted based on LCS noncompliances alone.

The MS/MSD %Rs were outside the lower and upper control limits, respectively, for several compounds. No action was warranted based on MS/MSD noncompliances alone.

The MS/MSD %R was below ten percent for 4-nitrophenol. No action was warranted since the MS/MSD was not associated with a sample within this SDG.

The MSD %Rs were below ten percent for pentachlorophenol, 2,4-dinitrophenol, hexachlorocyclopentadiene, and 4,6-dinitro-2-methylphenol. In addition, the surrogate %Rs were below the lower control limits for the MSD sample. However, no action was warranted since the MS and LCS %Rs were within control limits and only nondetected results were reported.

ADDITIONAL COMMENTS

Several samples contained positive results for compounds below the reporting limits. These results were qualified as estimated (J).

It should be noted that according to the laboratory statement of work (SOW) both the volatile and semivolatile fraction both were to contain 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene. Since this would create data management problems, the laboratory reported these compounds in the semivolatile fraction only. It was not necessary to qualify any data based on this issue.

The analytical SOW listed pentachloroethane to be analyzed and reported as a volatile compound but the laboratory analyzed and reported this compound as a semivolatile compound. It was not necessary to qualify any data based on this issue.

MEMO TO: TERRY HANSEN
DATE: NOVEMBER 16, 2000 – PAGE 4

The laboratory reported allyl chloride, which according to the analytical SOW was not a required volatile target compound. Because allyl chloride is an Appendix IX compound it was determined that this compound should remain in the database.

The laboratory reported Dinoseb, a,a-dimethylphenethylamine, chlorobenzilate, diallate, and N-nitrosopiperidine, which according to the analytical SOW were not required semivolatile target compounds. Because the aforementioned are Appendix IX compounds it was determined that these compounds should remain in the database.

The laboratory did not report hexachlorophene as requested in the analytical SOW. This compound is unstable and could not be analyzed.

EXECUTIVE SUMMARY

Laboratory Performance: The continuing calibration %Ds exceeded the quality control limits for 2,4-dinitrophenol and 4-nitroaniline. Methylene chloride was detected as a blank contaminant.

Other Factors Affection Data Quality: Several MS/MSD and LCS %Rs were outside the quality control limit in all the fractions.

MEMO TO: TERRY HANSEN
DATE: NOVEMBER 16, 2000 – PAGE 5

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (February, 1994), and the NFESC guidelines "Navy IRCDQM" (September 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Support Documentation

DATA QUALIFIER DEFINITIONS:

- U - Value is a nondetected result as reported by the laboratory and should not be considered present.
- J - Positive result is estimated as a result of a value below the CRQL or a technical noncompliance.
- UJ - Nondetected results is estimated as a result of a technical noncomplicane.
- UR - Nondetected result is rejected due to a severe technical noncompliance.

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
- D = MS/MSD Noncompliance
- E = LCS/LCSD Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - include ICSAB % R's
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation
- N = Internal Standard Noncompliance
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = Pest/PCB D% between columns for positive results
- V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
- W = EMPC result
- X = Signal to noise response drop
- Y = % Solid content is less than 30%

APPENDIX A
Qualified Analytical Results
