SDG NARRATIVE

MP014

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Samples in this lot were preserved by freezing in water due to samples effervescing when preserved with sodium bisulfate.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Methylene chloride was detected in the method blank for batch 0188232. This is a common laboratory contaminant with concentrations less than five times the reporting limit. All affected sample results are qualified with "B".

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The calibration check for instrument UX9 on June 29, 2000 failed the second source calibration check recoveries for Acetone, 2-Butanone, and 2-Hexanone. These compounds have poor purging efficiency; therefore, the initial calibration was acceptable.

SDG NARRATIVE
MP014

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

Recoveries of 2,4-Dinitrotoluene were out high in the method spike. Since there were no hits detected in any of the associated samples, no corrective action was necessary.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

⁽¹⁾ - Maximum concentration present in a soil preparation blank

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids and dilution factors were taken into consideration in evaluation for blank contamination. Positive results less than the blank action level for beryllium, copper, lead, potassium, sodium, tin and zinc were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as the results reported were either greater than the blank action level or were nondetected, "U".

ICP Interference Results

The interfering analyte calcium was present in sample MPT-G4-SU-19-10 at a concentration which was comparable to the level of calcium in the Interference Check Sample (ICS) solution. Several analytes namely barium, cadmium, chromium, cobalt, lead, manganese, nickel, selenium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the Instrument Detection Limit (IDL). Interference affects exist for cadmium, chromium, cobalt, nickel, selenium and vanadium in the affected sample. The nondetected results reported for cadmium and selenium were qualified as estimated, "UJ". The positive results reported for chromium, cobalt, nickel and vanadium were qualified as estimated, "J".

Matrix Spike/Matrix Spike Duplicate Recoveries

The Matrix Spike (MS)/Matrix Spike Duplicate (MSD) Percent Recoveries (%Rs) for aluminum were greater than the 125% quality control limits. Positive results reported for aluminum were qualified as estimated, "J".

The MS/MSD %Rs for manganese were less than 75% quality control limit. Positive results reported for manganese were qualified as estimated, "J".

Field Duplicate Precision

Field duplicate imprecision greater than 50% was noted for aluminum and calcium. The positive results reported for aluminum and calcium were qualified as estimated, "J".

Notes

A continuing calibration verification (CCV) %R was greater than the 110% quality control limits. However, the noncompliant CCV did not bracket samples from this SDG. Therefore, validation action was not required.

A field duplicate summary table is included in Appendix C.

Executive Summary

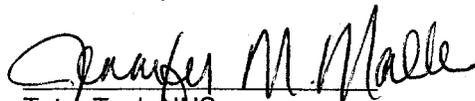

Laboratory Performance: Several analytes were present in the laboratory/preparation blanks.

Other Factors Affecting Data Quality: The interfering analyte calcium was present in several samples. MS/MSD noncompliance was noted for aluminum and manganese. Field duplicate imprecision was noted for aluminum and calcium.

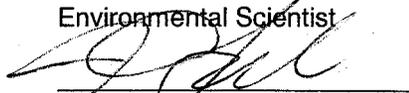

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy Installation Restoration Chemical Data Quality Manual" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG NARRATIVE
MP015

The following report contains the analytical results for twenty solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received July 1, 6, 7 and 8, 2000, according to documented sample acceptance procedures.

This SDG consists of four (4) laboratory ID's: A0G020104, A0G060209, A0G070231 and A0G080137.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 0.9, 0.9, 1.0, 1.3, 2.2, 3.4, 2.1 and 2.4° C.

(See STL's Cooler Receipt Form for additional information.)

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples MPT-G4-SU-18-08, MPT-G4-SU-19-10, MPT-G4-SU-20-10, MPT-G4-SU-21-07, MPT-G4-SU-22-08 and MPT-G4-SU-23-08 for batch 0195327 were not prepped with the Magnesium Chloride reagent as stated in the SOP.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The Initial Calibration Blank (ICB) for the Total Cyanide analysis associated with batch 0199466 was over the reporting limit for sample MPT-G4-SU-26-05. The prep blank was analyzed immediately afterward as ND. The prep blank showed system cleanliness, so the ICB and prep blank are reported as the same sample. All following Continuing Calibration Blank's were ND. All data is accepted.

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the IDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

For Navy projects, the method blank is to be analyzed whenever associated sample are reanalyzed. For these samples for batch 0196101 which were diluted for Calcium analysis, the blank was not reanalyzed. The blank was placed on an auto sampler and run with the samples, but due to instrument failure (the argon supply ran out), the blank was not analyzed. The Calcium results, which were all dilutions due to over range original results, were consistent with the original analyses. The results are reported.

The solid LCS associated with batch 0196101 was prepared using a routine LCS (approximately 1ml of DI water, spiked, and taken through the solid preparation procedure) rather than the solid LCS material specified in the Navy specific SOP. The LCS passed criteria and the results were not affected. The original data is reported.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Additional Comments

Positive results below the reporting limit were qualified as estimated, J, due to uncertainty near the detection limit.

It should be noted that according to the laboratory statement of work (SOW) both the volatile and semivolatile fraction both were to contain 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene. Since this would create data management problems, the laboratory reported these compounds in the semivolatile fraction only. It was not necessary to qualify any data based on this issue.

The analytical SOW listed pentachloroethane to be analyzed and reported as a volatile compound but the laboratory analyzed and reported this compound as a semivolatile compound. It was not necessary to qualify any data based on this issue.

The laboratory reported allyl chloride, which according to the analytical SOW was not a required volatile target compound. Because allyl chloride is an Appendix IX compound it was determined that this compound should remain in the database.

The laboratory reported Dinoseb, a,a-dimethylphenethylamine, chlorobenzilate, diallate, and N-nitrosopiperidine, which according to the analytical SOW are not required semivolatile target compounds. Because the aforementioned are Appendix IX compounds it was determined that these compounds should remain in the database.

The laboratory did not report hexachlorophene as requested in the analytical SOW. This compound is unstable and could not be analyzed.

EXECUTIVE SUMMARY

Laboratory Performance Issues: On instrument A3UX9, Laboratory Control Sample (LCS) % recoveries of 4-methyl-2-pentanone, chloroethane, acetone, 2-hexanone, styrene, chloroethane and carbon disulfide were outside quality control limits. No qualifiers were assigned on this basis.

LCS % recoveries of acetone, chloroethane, vinyl chloride, carbon disulfide, 4-methyl-2-pentanone, 2-butanone and 2-hexanone were outside quality control limits on instrument A3I503. No qualifiers were assigned on this basis.

LCS % recoveries of acetone and 2-butanone, chloroethane and carbon disulfide were outside quality control limits on instrument A3UX8A. No qualifiers were required on this basis.

Several volatile and semivolatile compounds did not meet initial and continuing calibration acceptance criteria.

Other Factors Affecting Data Quality: For sample MPT-G4-SU-27-07, % recovery of one acid fraction surrogate fell below quality control criteria.

VOA

Due to the presence of target analytes, soil samples MPT-G4-SU-26-05, MPT-G4-SU-28-05, MPT-G4-SU-31-08, MPT-G4-SU-34-05 and MPT-G4-SU-DU02 were analyzed and reported using the medium level (conc.) method. This accounts for the elevated reporting limits for these samples.

The following compounds were detected in laboratory method blanks. * Denotes medium level method blanks:

<u>Compound</u>	<u>Maximum Concentration (ug/kg)</u>	<u>Blank Action Level (ug/kg)</u>
Acetone	4.4	44
Methylene chloride	4.8	48
*Acetone	580	5800
*Methylene chloride	80	8000
*2-butanone	890	8900
*Tetrachloroethene	35	175

Sample aliquot, % moisture and dilution factors were taken into consideration when applying blank action levels. The symbol * indicates analytes detected in medium level method blanks and only apply to samples analyzed using the medium level method. Positive results reported for the above compounds at concentrations less than action levels were qualified as undetected (U) in the affected samples. Field quality control blanks were not qualified based on method blank contamination.

Initial calibration Relative Response Factors (RRFs) fell below the 0.05 quality control limit for acrolein, acetonitrile and isobutyl alcohol on 6/29/00, on instrument A3UX9. Only nondetected results were reported for acrolein, acetonitrile and isobutyl alcohol and these were rejected (UR) in the affected samples.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for acrolein, acetonitrile, isobutyl alcohol and propionitrile on 7/5/00, 10:47 and 11:12, on instrument A3UX9. Only nondetected results were reported for the aforementioned compounds and these were rejected (UR) in the affected samples.

Continuing calibration verification %Differences (%Ds) exceeded the 25% quality control limit for methacrylonitrile, isobutyl alcohol and methyl methacrylate on 7/5/00, 11:12, on instrument A3UX9. Only nondetected results were reported for methacrylonitrile and methyl methacrylate and these were qualified as estimated (UJ) in the affected samples. Additionally, the nondetected result reported for isobutyl alcohol was previously qualified for the above RRF noncompliance and did not require further qualification.

Initial calibration RRFs fell below the 0.05 quality control limit for acrolein and isobutyl alcohol on 7/8/00, on instrument A3UX9. Only nondetected results were reported for acrolein and isobutyl alcohol and these were rejected (UR) in the affected samples.

Continuing calibration verification RRFs fell below the 0.05 quality control limit for acrolein and isobutyl alcohol on 7/11/00, 08:27 and 08:2, on instrument A3UX9. Only nondetected results were reported for acrolein and isobutyl alcohol and these were rejected (UR) in the affected samples.

A continuing calibration verification %D exceeded the 25% quality control limit for propionitrile on 7/11/00, 08:21, on instrument A3UX9. Only nondetected results were reported for propionitrile and these were qualified as estimated (UJ) in the affected samples.

SDG NARRATIVE MP015

The following report contains the analytical results for twenty solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received July 1, 6, 7 and 8, 2000, according to documented sample acceptance procedures.

This SDG consists of four (4) laboratory ID's: A0G020104, A0G060209, A0G070231 and A0G080137.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 0.9, 0.9, 1.0, 1.3, 2.2, 3.4, 2.1 and 2.4° C.

SDG NARRATIVE MP015

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample MPT-G4-SU-34-05 was diluted during analysis due to high concentrations of unlisted compounds (TICs) in this sample.

Samples in this lot were preserved by freezing in water due to samples effervescing when preserved with sodium bisulfate.

The sample(s) had elevated reporting limits due to matrix interferences, TICs, or dilution.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Sample(s) which contain concentrations of target analyte(s) at a reportable level in the associated method blank(s) have been flagged with B. All target analytes in the method blank must be below the reporting limits (RL) or the associated sample(s) must be ND with the exception of Methylene chloride, Acetone, and 2-Butanone. These are common laboratory contaminants and may be present in concentrations up to five times the reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The initial calibration second source verification failed the laboratory acceptance criteria for acetone and 2-butanone for the initial calibration analyzed on instrument 503 on July 12, 2000. These are poor purging compounds. The initial calibration was accepted.

SDG NARRATIVE
MP015

GC/MS VOLATILES(continued)

The calibration check is out of control for Acetone, 2-Butanone, and 2-Hexanone on instrument ux9 on June 29, 2000 for the 8260 method. The calibration check was reanalyzed with similar results. These compounds are considered to have poor purging efficiency. The calibration was accepted.

SDG NARRATIVE MP015

GC/MS SEMIVOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples MPT-G4-SU-26-05, MPT-G4-SU-28-05, MPT-G4-SU-31-08, MPT-G4-SU-DU02 and MPT-G4-SU-34-05 had elevated reporting limits due to sample matrix.

Holding Time Violations

Samples MPT-G4-SU-18-08 and MPT-G4-SU-21-07 had surrogate recoveries outside acceptance limits. Upon re-extraction and reanalysis, all surrogates were within acceptance limits; however, recommended holding time had been exceeded.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

Due to high analyte concentrations or matrix interference, the MS/MSD for batch 0192232 was analyzed at a dilution. No corrective action is required for dilutions.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Laboratory Blanks

The following contaminant was detected in the laboratory method / preparation blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Aluminum	56.4 µ/L	28.2 mg/kg
Barium	1.0 µ/L	0.5 mg/kg
Beryllium	1.2 µ/L	0.6 mg/kg
Calcium ⁽¹⁾	9.9 mg/kg	49.5 mg/kg
Copper	4.5 µ/L	2.25 mg/kg
Iron	39.5 µ/L	19.75 mg/kg
Magnesium	95.4 µ/L	47.7 mg/kg
Manganese ⁽¹⁾	0.12 mg/kg	0.6 mg/kg
Zinc	7.2 µ/L	3.6 mg/kg
Tin ⁽¹⁾	2.7 mg/kg	13.5 mg/kg

(1) Maximum concentration present in a soil preparation blank.

An action of level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot, percent solids and dilution factors were taken into consideration when evaluation for blank contamination. Positive results less than the blank action level for beryllium, copper, magnesium, zinc and tin were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as all result reported for the remaining analytes were either nondetected or greater then the blank action level.

ICP Interference Check Sample Results

The interfering analyte calcium was present in sample MPT-GW-SU-45-04 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, beryllium, cadmium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cadmium, cobalt and selenium in the affected sample. The positive results reported for cadmium and cobalt were qualified as estimated, "J". The nondetected result reported for selenium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-GW-SU-52-05 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, beryllium, cadmium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for lead, nickel, selenium, vanadium and zinc in the affected sample. The positive results reported for lead, nickel, vanadium and zinc were qualified as estimated, "J". The nondetected result reported for selenium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-GW-SU-53-05 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, beryllium, cadmium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cobalt, lead, nickel, selenium and vanadium in the affected sample. The positive results reported for cobalt, lead, nickel and vanadium were qualified as estimated, "J". The nondetected result reported for selenium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-GW-SU-54-05 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, beryllium, cadmium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cadmium, lead, manganese, nickel, selenium and vanadium in the affected sample. The positive results reported for cadmium, lead, manganese, nickel and vanadium were qualified as estimated, "J". The nondetected result reported for selenium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-GW-SU-55-05 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, beryllium, cadmium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cobalt, lead, nickel, selenium and zinc in the affected sample. The positive results reported for cobalt, lead, nickel and zinc were qualified as estimated, "J". The nondetected result reported for selenium was qualified as estimated, "UJ".

Matrix Spike / Matrix Spike Duplicate Results

The Matrix Spike / Matrix Spike Duplicate (MS/MSD) Percent Recoveries (%Rs) for zinc were <75% quality control limit. The positive results reported for zinc were qualified as estimated, "J".

The MS/MSD %Rs for cyanide were both above and below the 75-125% quality control limits. The nondetected results reported for cyanide were qualified as estimated, "UJ".

ICP Serial Dilution Results

The ICP Serial Dilution Percent Difference (%D) for zinc was >10% quality control limit. The positive results reported for zinc were qualified as estimated, "J".

Notes

A Continuing Calibration Verification (CCV) %R for magnesium was <90% quality control limit. No samples were bracketed by the noncompliant CCV. Therefore, no validation action was taken.

A CCV %R cyanide was >110% quality control limit. No samples were bracketed by the noncompliant CCV. Therefore, no validation action was taken.

The MS/MSD Relative Percent Differences (RPDs) for nickel and zinc were >35% quality control limit. However, no validation action is taken based on MS/MSD RPD noncompliances.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

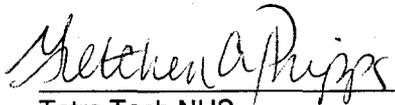

Other Factors Affecting Data Quality: The interfering analyte calcium was present in several samples. Zinc was qualified due to MS/MSD and ICP Serial Dilution noncompliances. Cyanide was qualified due to MS/MSD noncompliances.

SDG NARRATIVE
MP018

The following report contains the analytical results for nineteen solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV site, project number N0123. The samples were received July 8, 11, 12 and 13, 2000, according to documented sample acceptance procedures.

This SDG consists of four (4) laboratory ID's: A0G080139, A0G110127, A0G120141 and A0G130119.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000 and August 8, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 2.1, 2.4, 2.4, 3.0, 1.2, 2.1 and 1.8° C.

(See STL's Cooler Receipt Form for additional information.)

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

The 0.025 and 0.075 standards for the Total Cyanide analysis for the following samples on batch 0202469 failed high. The LCS and prep blanks met acceptance criteria. Due to holding times, the samples were not re-digested and reanalyzed. The results for the samples were ND; therefore, the results were accepted.

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the MDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Serial dilution of a sample in this lot indicates that physical and chemical interferences were present. Refer to the sample report pages for the affected analytes.

Holding Time Violations

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

MEMO TO: T. HANSEN – PAGE 3

DATE: 12/11/00

An initial calibration %RSD exceeded the 30% (but < 50%) quality control limit for hexachlorocyclopentadiene on instrument A4HP6, on 7/25/00. Only nondetected results were reported for hexachlorocyclopentadiene, therefore, no action was taken based on this noncompliance.

A continuing calibration verification %D exceeded the 25% quality control limit for 1,3,5-trinitrobenzene on instrument A4HP6, on 7/24/00. Only nondetected results were reported for 1,3,5-trinitrobenzene and these were qualified as estimated (UJ) in samples MPT-G4-SU-58-05, MPT-G4-SU-59-05, MPT-G4-SU-61-05, MPT-G4-SU-62-05, MPT-G4-SU-63-05, MPT-G4-SU-64-05, MPT-G4-SU-65-05, MPT-G4-SU-DU04 and MPT-G4-SU-DU05.

A continuing calibration verification RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on instrument A4HP6, on 7/25/00. Only nondetected results were reported for 4-nitroquinoline-1-oxide and these were rejected (UR) in samples MPT-G4-SU-56-05, MPT-G4-SU-57-03, MPT-G4-SU-60-05 and MPT-G4-SU-DU03.

Continuing calibration verification %Ds exceeded the 25% quality control limit for 4-nitroquinoline-1-oxide, 1,3,5-trinitrobenzene and 2-naphthylamine. Nondetected results were reported for 1,3,5-trinitrobenzene and 2-naphthylamine and these were qualified as estimated (UJ) in samples MPT-G4-SU-56-05, MPT-G4-SU-57-03, MPT-G4-SU-60-05 and MPT-G4-SU-DU03.

Additional Comments

Positive results below the reporting limit were qualified as estimated, J, due to uncertainty near the detection limit.

The laboratory did perform an MS / MSD analysis, however, the sample was not relevant to this SDG.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Volatile LCS % recovery of acetone exceeded quality control limits on instrument A3UX9. Acetone and methylene chloride were detected in laboratory method blanks. Initial and continuing calibration noncompliances were noted affecting both volatile and semivolatile analysis.

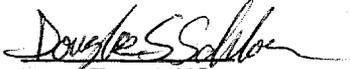

Other Factors Affecting Data Quality: None

SDG NARRATIVE MP021

The following report contains the analytical results for thirteen solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group site, project number N0123. The samples were received July 15, 2000, according to documented sample acceptance procedures.

This SDG consists of two (2) laboratory ID's: A0G150130 and A0G150133.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated. Preliminary results were provided by facsimile transmission to Tom Thompson on July 21, 2000.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The temperature of the coolers upon sample receipt was 1.4, 2.6, 3.0 and 1.5° C.

(See STL's Cooler Receipt Form for additional information.)

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) which contain results between the MDL and the RL are flagged with "J". There is the possibility of false positive or misidentification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation will be performed only down to the standard reporting limit (SRL). The acceptance criteria for quality control criteria may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

Sample(s) which contain concentrations of target analyte(s) at a reportable level in the associated method blank(s) have been flagged with B. All target analytes in the method blank must be below the reporting limits (RL) or the associated sample(s) must be ND with the exception of Methylene chloride, Acetone, and 2-Butanone. These are common laboratory contaminants and may be present in concentrations up to five times the reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

VOA

The following compounds were detected in laboratory method blanks:

<u>Compound</u>	<u>Maximum Concentration (ug/kg)</u>	<u>Blank Action Level (ug/kg)</u>
Acetone	2.4	24
Methylene chloride	1.6	16

Sample aliquot, % moisture and dilution factors were taken into consideration when applying blank action levels. Positive results less than the action level were reported for acetone, therefore, these were qualified as nondetected (U) in all samples. Positive results less than the action level were reported for methylene chloride, therefore, these were qualified as nondetected (U) in samples MPT-G4-SU-62-05, MPT-G4-SU-63-05, MPT-G4-SU-64-05, MPT-G4-SU-DU04 and MPT-G4-SU-DU05.

An initial calibration Relative Response Factor (RRFs) fell below the 0.05 quality control limit for isobutyl alcohol, on instrument A3UX9 on 7/14/00. Only nondetected results were reported for isobutyl alcohol, and these were rejected (UR) in all samples.

An initial calibration % Relative Standard Deviation (%RSD) exceeded the 30% (but<50%) quality control limit for bromomethane on instrument A3UX9 on 7/14/00. Only nondetected results were reported for bromomethane, therefore, no action was taken based on this noncompliance.

A continuing calibration verification RRF fell below the 0.05 quality control limit for isobutyl alcohol on instrument A3UX9, on 7/21/00. Only nondetected results were reported for isobutyl alcohol and these were rejected (UR) in the affected samples.

A continuing calibration verification %Difference (%D) exceeded the 25% quality control limit for propionitrile on instrument A3UX9, on 7/21/00. Only nondetected results were reported for propionitrile and these were qualified as estimated (UJ) in the affected samples.

Laboratory Control Sample (LCS) % recovery of acetone exceeded quality control limits. No action was taken based on this noncompliance.

SVOA

An initial calibration RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on instrument A4HP6, on 7/24/00. Nondetected results for 4-nitroquinoline-1-oxide were rejected (UR) in samples MPT-G4-SU-58-05, MPT-G4-SU-59-05, MPT-G4-SU-60-05, MPT-G4-SU-61-05, MPT-G4-SU-62-05, MPT-G4-SU-63-05, MPT-G4-SU-64-05, MPT-G4-SU-65-05, MPT-G4-SU-DU04 and MPT-G4-SU-DU05.

An initial calibration RRF fell below the 0.05 quality control limit for 4-nitroquinoline-1-oxide on instrument A4HP6, on 7/25/00. Only nondetected results were reported for 4-nitroquinoline-1-oxide were rejected (UR) in samples MPT-G4-SU-56-05, MPT-G4-SU-57-03, MPT-G4-SU-60-05 and MPT-G4-SU-DU03.

An initial calibration %RSD exceeded the 30% (but<50%) quality control limit for hexachlorocyclopentadiene on instrument A4HP6, on 7/25/00. Only nondetected results were reported for hexachlorocyclopentadiene, therefore, no action was taken based on this noncompliance.

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method / preparation blanks at the following maximum concentrations:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Aluminum ⁽¹⁾	126 µg/L	630 µg/L
Barium ⁽¹⁾	1.7 µg/L	8.5 µg/L
Beryllium	0.5 µg/L	2.5 µg/L
Calcium ⁽¹⁾	336 µg/L	1680 µg/L
Chromium ⁽¹⁾	1.3 µg/L	6.5 µg/L
Cobalt ⁽¹⁾	5.6 µg/L	28.0 µg/L
Copper ⁽¹⁾	6.4 µg/L	32.0 µg/L
Iron ⁽¹⁾	125 µg/L	625 µg/L
Magnesium ⁽¹⁾	71.3 µg/L	356.5 µg/L
Manganese ⁽¹⁾	11.7 µg/L	58.5 µg/L
Nickel ⁽¹⁾	80.2 µg/L	401 µg/L
Potassium ⁽¹⁾	361 µg/L	1805 µg/L
Sodium ⁽¹⁾	5560 µg/L	27800 µg/L
Zinc ⁽¹⁾	38.9 µg/L	194.5 µg/L

⁽¹⁾ Maximum concentration present in a laboratory preparation (leachate) blank.

An action level of 5X the maximum concentration were used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluation for blank contamination. Positive results less than the blank action levels for aluminum, barium, beryllium, chromium, copper, iron, magnesium, manganese, nickel, potassium, sodium and zinc were qualified, "U", as a result of blank contamination. No qualification action was required for calcium or cobalt since all results were either nondetected or greater than the action level.

Matrix Spike and Matrix Spike Duplicate Results

The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Percent Recoveries (%Rs) were < 75% quality control limit for antimony. All samples for antimony were nondetected and were qualified "U".

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

Other Factors Affecting Data Quality: Antimony was qualified due to MS/MSD noncompliance.

SDG NARRATIVE

MP031

The following report contains the analytical results for ten solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV Site, project number N0123. The samples were received November 30, 2000, according to documented sample acceptance procedures.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The cooler was received at the laboratory at a temperature of 1.5° C.

Sample TRIP BLANK was received at the laboratory but not listed on the chain-of-custody. Sample was archived.

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the MDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Overview

The sample set for CTO 091, NS Mayport, SDG MP037, consists of fourteen (14) leachate environmental samples.

The samples were extracted by the Synthetic Precipitate Leachate Procedure (SPLP) and analyzed for target analyte list (TAL) metals and cyanide. The samples were collected by TetraTech NUS on January 9 and 10, 2000 and analyzed by Severn Trent Laboratories under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Metals analyses, with the exception of mercury were conducted using SW 846 method 6010B. Mercury analyses were conducted using SW 846 method 7470A. Cyanide analyses were conducted using SW 846 method 9012A.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA).

These data were evaluated based on the following parameters:

- * • Data Completeness
 - Holding Times
 - * • Calibration Recoveries
 - Laboratory Blank Analyses
 - * • Laboratory Control Sample Results
 - * • ICP Interference Check Sample Results
 - Matrix Spike / Matrix Spike Duplicate Recoveries
 - * • MS/MSD Relative Percent Differences
 - * • ICP Serial Dilution Results
 - * • Sample Quantitation
 - * • Detection Limits
- * - All quality control criteria were met for this parameter.

Holding Times

The 14-day holding time for cyanide was exceeded by 1-2 days for all samples. All nondetected results for cyanide were qualified as estimated, "UJ".

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method / preparation blanks at the following maximum concentrations:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Aluminum ⁽¹⁾	272 µg/L	1360 µg/L
Barium ⁽¹⁾	2.8 µg/L	14.0 µg/L
Beryllium	1.8 µg/L	9.0 µg/L
Cadmium	0.2 µg/L	1.0 µg/L
Calcium ⁽¹⁾	1590 µg/L	7950 µg/L
Chromium	1.8 µg/L	9.0 µg/L
Cobalt	0.9 µg/L	4.5 µg/L
Iron	59.4 µg/L	297 µg/L
Lead ⁽²⁾	1.2 µg/L	6.0 µg/L
Magnesium ⁽¹⁾	87.1 µg/L	435.5 µg/L
Manganese	1.9 µg/L	9.5 µg/L
Mercury	0.1 µg/L	0.5 µg/L
Potassium ⁽¹⁾	42.4 µg/L	212 µg/L
Sodium ⁽¹⁾	5400 µg/L	27000 µg/L
Vanadium	1.1 µg/L	5.5 µg/L
Zinc ⁽²⁾	8.5 µg/L	42.5 µg/L

⁽¹⁾ Maximum concentration present in a laboratory leachate blank.

⁽²⁾ Maximum concentration present in a laboratory preparation blank.

An action level of 5X the maximum concentration were used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors were taken into consideration when evaluation for blank contamination. Positive results less than the blank action levels for all of the above analytes were qualified, "U", as a result of blank contamination and should not be considered present.

Matrix Spike and Matrix Spike Duplicate Results

The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Percent Recoveries (%Rs) were < 75% quality control limit for antimony. All positive and nondetected results reported for antimony qualified as estimated, "J" and "UJ", respectively. Results for antimony should be considered biased low.

The MSD percent recovery was < 75% quality control limit for cyanide. All nondetected results for cyanide were qualified as estimated, "UJ".

Notes

The MS/MSD RPD for cyanide was >20% quality control limit. Validation action was not taken based on the MS/MSD comparison.

Executive Summary

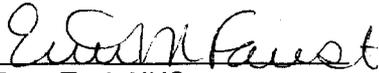

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks. The holding time was exceeded for cyanide.

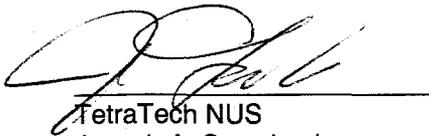

Other Factors Affecting Data Quality: Antimony and cyanide were qualified due to matrix spike and/or matrix spike duplicate noncompliance.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

The Sodium leachate blank in SPLP batch 1017146 read 5400 ug/L and the associated sample results were above the reporting limit except samples MPT-G4-SU65-05 and MPT-G4-SU31-08. Since Sodium Hydroxide is used for TCLP analyses that are performed in the same laboratory with the same equipment as the SPLP analyses, Sodium Hydroxide contamination is unavoidable.

The method and leachate blank in batch 1017146 contained a concentration of a target analyte above reportable levels for Aluminum. Samples MPT-G4-SU47-02, MPT-G4-SU48-04, MPT-G4-SU49-03, and MPT-G4-SU46-03 were greater than 10 times the blank level and results were accepted. The remaining samples were reppeded.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples MPT-G4-SU42-04, MPT-G4-SU44-04, MPT-G4-SU47-02, MPT-G4-SU48-04, MPT-G4-SU49-03, MPT-G4-SU46-03, MPT-G4-SU56-05, MPT-G4-SU06-07, MPT-G4-SU57-03, and MPT-G4-SU54-05 for Cyanide analyses were set up for leaching on the day they expired. As a result, they did not go through the whole leach process within 14 days after collection. These samples were initially set up one day prior to expiration but done incorrectly, the analyst weighed the incorrect volume for an eighteen hour leach. They were analyzed on the auto-analyzer within holding time after leaching.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Laboratory Blanks

The following contaminant was detected in the laboratory method / preparation blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Aluminum	31.3 µg/L	15.65 mg/kg
Barium ⁽¹⁾	0.16 mg/kg	0.80 mg/kg
Beryllium	1.7 µg/L	0.85 mg/kg
Calcium ⁽¹⁾	50.9 mg/kg	254.5 mg/kg
Copper	2.2 µg/L	1.1 mg/kg
Iron	44.5 µg/L	22.25 mg/kg
Magnesium ⁽¹⁾	49.2 mg/kg	29.5 mg/kg
Manganese	2.2 µg/L	1.1 mg/kg
Nickel	11.1 µg/L	5.55 mg/kg
Sodium ⁽¹⁾	83.0 mg/kg	415 mg/kg
Thallium	6.2 µg/L	3.1 mg/kg
Zinc	5.1 µg/L	2.55 mg/kg
Tin ⁽¹⁾	2.3 mg/kg	11.5 mg/kg

⁽¹⁾ Maximum concentration present in a soil preparation blank.

An action of level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot, percent solids and dilution factors were taken into consideration when evaluation for blank contamination. Positive results less than the blank action level for beryllium, copper, nickel, sodium, tin and zinc were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as all result reported for the remaining analytes were either nondetected or greater then the blank action level.

ICP Interference Check Sample Results

The interfering analyte calcium was present in sample MPT-55-SD-03-01 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, lead, manganese, potassium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cadmium, chromium, vanadium and zinc in the affected sample. The positive results reported for chromium, vanadium and zinc were qualified as estimated, "J". The nondetected result reported for cadmium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-55-SS-01-01 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, lead, manganese, potassium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). The nondetected result reported for cadmium was qualified as estimated, "UJ".

The interfering analyte calcium was present in sample MPT-55-SS-05-01 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, lead, manganese, potassium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cadmium in the affected sample. The positive results reported for cadmium were qualified as estimated, "J".

The interfering analyte calcium was present in sample MPT-55-SS-07-01 at a concentration which was comparable to the level of calcium in the Interference Check Sample Solution. Several analytes namely barium, cadmium, chromium, cobalt, copper, lead, manganese, potassium, vanadium and zinc were present in the Interference Check Sample Solution at concentrations greater than their Instrument Detection Limits (IDLs). Interference affects exist for cadmium, chromium, manganese and vanadium in the affected sample. The positive results reported for cadmium, chromium, manganese and vanadium were qualified as estimated, "J".

Matrix Spike / Matrix Spike Duplicate Results

The Matrix Spike / Matrix Spike Duplicate (MS/MSD) Percent Recoveries (%Rs) for zinc were <75% quality control limit. The positive results reported for zinc were qualified as estimated, "J".

The MS/MSD %Rs for aluminum were >125% quality control limit. The positive results reported for aluminum were qualified as estimated, "J".

The MS/MSD %Rs for copper were <10% quality control limit. The positive results reported for copper were qualified as estimated, "J".

ICP Serial Dilution Results

The ICP Serial Dilution Percent Differences (%Ds) for aluminum and zinc were >10% quality control limit. The positive results reported for aluminum and zinc were qualified as estimated, "J".

Notes

Several Continuing Calibration Verification (CCV) %R for selenium, thallium and tin were <90% quality control limit. No samples were bracketed by the noncompliant CCVs. Therefore, no validation action was taken.

The MS/MSD Relative Percent Difference (RPD) for aluminum was >35% quality control limit. However, no validation action is taken based on MS/MSD RPD noncompliances.

A cooler was received at 4.6°C. No validation action was taken.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

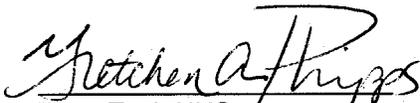

MEMO TO: T. HANSEN - PAGE 4
DATE: OCTOBER 11, 2000

Other Factors Affecting Data Quality: The interfering analyte calcium was present in several samples. Aluminum, copper and zinc were qualified due to MS/MSD. Aluminum and zinc were qualified due to ICP Serial Dilution noncompliances.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", September 1994 and the NFESC document entitled "Navy Installation Restoration Chemical Data Quality Manual." (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG NARRATIVE

MP022

The following report contains the analytical results for twelve solid samples submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV Site, project number N0123. The samples were received August 1, 2 and 4, 2000, according to documented sample acceptance procedures.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The coolers were received at the laboratory at temperatures of 4.6, 3.6 and 2.3° C.

(See STL's Cooler Receipt Form for additional information.)

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the IDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Serial dilution of a sample in this lot indicates that physical and chemical interferences were present. Refer to the sample report pages for the affected analytes.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

OVERVIEW

The sample set for CTO 091, NS Mayport; SDG MP022 consists of twelve (12) soil environmental samples. The samples were analyzed for Appendix IX volatile, semivolatile, pesticide and polychlorinated biphenyl organic compounds. No field duplicate pairs were included in SDG MP022.

The samples were collected by TetraTech NUS on July 31st, August 1st and 3rd, 2000 and analyzed by Severn Trent Laboratories. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, 8081A and 8082 analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data completeness
- * • Holding times
- * • GC/MS Tuning
- Initial and continuing calibration
- Blank results
- Surrogate spike recoveries
- * • Blank Spike / Blank Spike Duplicate results
- * • Detection Limits
- * • Compound Quantitation
- * • Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A.

Memo to: T. Hansen – Page 4

Date: 11/30/00

A continuing calibration verification %D exceeded the 15% quality control limit on both analytical columns for Kepone on 8/8/00, 22:17, on instrument A2HP5. Only nondetected results were reported for Kepone and these were qualified as estimated (UJ) in the affected samples.

Only nondetected results were reported for Methoxychlor and Endrin ketone, which do not require qualification based on this calibration noncompliance.

The surrogate Decachlorobiphenyl (DCB) was not recovered on one analytical column for the following samples:

MPT-55-SS-01-01	MPT-55-SS-02-01	MPT-55-SS-03-01
MPT-55-SS-05-01	MPT-55-SS-08-01	MPT-55-SD-01-01

No actions were taken based on the above noncompliance because all other surrogate % recoveries were within quality control limits.

The noncompliant surrogate recoveries in sample MPT-55-SS-06-01 were due to the sample dilution required for analysis. No qualifiers were required on this basis.

The Relative Percent Difference (RPD) between analytical columns exceeded the 25% quality control limit for one sample. Positive results were qualified as estimated, (J), for RPDs greater than 25% and less than 100%. Positive results were rejected, (R), if the RPD exceeded 100%.

<u>Sample</u>	<u>Compound</u>	<u>RPD</u>	<u>Qualifier</u>
MPT-55-SS-06-01	4,4'-DDT	566.8	R
	4,4'-DDE	81.1	J

PCB

An initial calibration %RSD exceeded the 20% quality control limit on one analytical column for Aroclor 1260 (peaks 1-5) on 8/13/00, on instrument A2HP2. Only nondetected results were reported for Aroclor 1016, which do not require qualification based on this calibration noncompliance.

The RPD between analytical columns exceeded the 25% quality control limit for one sample. The positive result reported for Aroclor 1260 in sample MPT-55-SS-08-01 was qualified as estimated (J).

Additional Comments

Positive results below the reporting limit were qualified as estimated, J, due to uncertainty near the detection limit.

It should be noted that according to the laboratory statement of work (SOW) both the volatile and semivolatile fraction both were to contain 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene. Since this would create data management problems, the laboratory reported these

Date: 11/30/00

compounds in the semivolatile fraction only. It was not necessary to qualify any data based on this issue.

The analytical SOW listed pentachloroethane to be analyzed and reported as a volatile compound but the laboratory analyzed and reported this compound as a semivolatile compound. It was not necessary to qualify any data based on this issue.

The laboratory reported allyl chloride, which according to the analytical SOW was not a required volatile target compound. Because allyl chloride is an Appendix IX compound it was determined that this compound should remain in the database.

The laboratory reported Dinoseb, a,a-dimethylphenethylamine, chlorobenzilate, diallate, and N-nitrosopiperidine, which according to the analytical SOW were not required semivolatile target compounds. Because the aforementioned are Appendix IX compounds it was determined that these compounds should remain in the database.

The laboratory did not report hexachlorophene as requested in the analytical SOW. This compound is unstable and could not be analyzed.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Volatile Laboratory Control Sample (LCS) % recovery of acetone exceeded quality control limits. No qualifiers were required on this basis.

Other Factors Affecting Data Quality: The following pesticide samples were analyzed at a frequency greater than the required 12hrs for a calibration verification standard containing Isodrin and Kepone. Nondetected results for Kepone were qualified as estimated (UJ), due to non-compliant %Ds. No action was taken for Isodrin on this basis.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the NFESC guidelines "Navy IRCDQM" (Sept 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

SDG NARRATIVE

MP022

GC/MS VOLATILES

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Samples in this lot were preserved by freezing in water due to samples effervescing when preserved with sodium bisulfate.

Sample(s) that contain results between the MDL and the RL were flagged with "J". There is the possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS and Surrogates Outside of QC Criteria

A full analyte spike was analyzed on a non-Navy sample in batch 0222263 due to a heavy sample load. QC check was in control.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SDG NARRATIVE

MP023

The following report contains the analytical results for four water samples and one quality control sample submitted to STL North Canton by Tetra Tech NUS, Inc. from the NS Mayport Group IV Site, project number N0123. The samples were received August 2 and 4, 2000, according to documented sample acceptance procedures.

STL North Canton utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Please refer to individual analytical sections for laboratory specific narratives.

SAMPLE RECEIVING

The coolers were received at the laboratory at temperatures of 3.6 and 2.3° C.

(See STL's Cooler Receipt Form for additional information.)

METALS

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the IDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are \pm the standard reporting limit (SRL).

Some reporting limits are lower than our standard reporting limit (SRL) but are supported by the laboratory's MDL and/or IDLs; however, there are no standards in the calibration curve low enough to support these value. The continuing calibration blanks and method blanks may not support the lower RL.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

SDG NARRATIVE

MP023

GENERAL CHEMISTRY

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan. All data have been found to be compliant with laboratory protocol.

Sample(s) that contain results between the MDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

Holding Time Violation

All samples were prepared and analyzed within the method-specified holding time requirements.

Method Blank Contamination

All analytes in the method blank were less than the associated reporting limits.

MS/MSD/LCS/DCS/Sample Duplicate Outside of QC Criteria

All spike recovery and RPD data met method-specific quality control criteria.

Calibrations

All calibrations and calibration verifications met method-specific quality control criteria.

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method / preparation blanks at the following maximum concentrations:

Affected samples : All

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level (aqueous)</u>
Aluminum	40.5 ug/L	202.5 ug/L
Barium	0.9 ug/L	4.5 ug/L
Beryllium	0.8 ug/L	4.0 ug/L

Vanadium	1.3 ug/L	6.5 ug/L
Zinc	1.5 ug/L	7.5 ug/L

⁽¹⁾ - Maximum concentration present in an aqueous preparation blank

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors were taken into consideration in evaluation for blank contamination. Positive results less than the blank action level for aluminum, chromium, cobalt, nickel and vanadium were qualified, "U", as a result of blank contamination. No validation action was required for the remaining analytes as the results reported were either greater than the blank action level or were nondetected, "U".

Notes

The reported value for cyanide was less than the laboratory reporting limit in sample MPT-55SW-02-01. The sample result was reported as nondetected at 10 ug/L.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory/preparation blanks.

Other Factors Affecting Data Quality: Laboratory duplicate imprecision was noted for aluminum and iron.

⁽¹⁾ Maximum concentration used as screening value

⁽²⁾ The background screening value is twice the average of background concentrations for inorganic analytes.

⁽³⁾ Based on Superfund Preliminary Remediation Goals, USEPA Region IX, Residential land use (Cancer benchmark value = 1E-06, Hazard Quotient = 0.1) (May 2000)

⁽⁴⁾ FL Residential from Technical Report: Development of Soil Cleanup Levels for Chapter 62-777, F.A.C. (May 1999)(Cancer benchmark value = 1E-06, Hazard Quotient = 0.1)

⁽⁵⁾ Rationale Codes

Selection Reason	Above Screening Levels (ASL)
	If one cPAH is selected as a COPC, all are selected (PAH)
Deletion Reason	Essential Nutrient (NUT)
	Below Screening Levels (BSL)

Chemical names in bold indicate that chemical was selected as a COPC

Definitions:

NA = Not Applicable

ARAR/TBC = Applicable or Relevant and Appropriate Requirement/ To Be Considered

J = Estimated Value

COPC = Chemical of Potential Concern

s = direct exposure based on acute toxicity

N = noncarcinogen

C = carcinogen

⁽¹⁾ Maximum concentration used as screening value

⁽²⁾ The background screening value is twice the average of background concentrations for inorganic analytes.

⁽³⁾ Based on Superfund Preliminary Remediation Goals, USEPA Region IX, Residential land use (Cancer benchmark value = 1E-06, Hazard Quotient = 0.1) (May 2000)

⁽⁴⁾ FL Residential from Technical Report, Development of Soil Cleanup Levels for Chapter 62-777, F.A.C. (May 1999)(Cancer benchmark value = 1E-06, Hazard Quotient = 0.1)

⁽⁵⁾ Rationale Codes

Selection Reason

Above Screening Levels (ASL)

Deletion Reason

If one cPAH is selected as a COPC, all are selected (PAH)
Maximum detected concentration is below background screening level (BKG)
Essential Nutrient (NUT)
Below Screening Levels (BSL)

Definitions:

NA = Not Applicable

ARAR/TBC = Applicable or Relevant and Appropriate Requirement/ To Be Considered

J = Estimated Value

COPC = Chemical of Potential Concern

s = direct exposure based on acute toxicity

N = noncarcinogen

C = carcinogen

Chemical names in bold indicate that chemical was selected as a COPC

⁽¹⁾ Maximum concentration used as screening value

⁽²⁾ The background screening value is twice the average of background concentrations for inorganic analytes.

⁽³⁾ Based on Superfund Preliminary Remediation Goals, USEPA Region IX, Residential land use (Cancer benchmark value = 1E-06, Hazard Quotient = 0.1) (May 2000)

⁽⁴⁾ FL Residential from Technical Report: Development of Soil Cleanup Levels for Chapter 62-777, F.A.C. (May 1999)(Cancer benchmark value = 1E-06, Hazard Quotient = 0.1)

⁽⁵⁾ Rationale Codes

Selection Reason Above Screening Levels (ASL)
If one cPAH is selected as a COPC, all are selected (PAH)
Deletion Reason Maximum detected concentration is below background screening level (BKG)
Essential Nutrient (NUT)
Below Screening Levels (BSL)

Chemical names in bold indicate that chemical was selected as a COPC

Definitions:

NA = Not Applicable
ARAR/TBC = Applicable or Relevant and Appropriate Requirement/ To Be Considered
J = Estimated Value
COPC = Chemical of Potential Concern

Data from groundwater collected from 6/2000 through 01/2001 except where noted.

(1) Maximum concentration used as screening value

(2) The background screening value is twice the average of detected concentrations for inorganic analytes.

(3) Based on Superfund Preliminary Remediation Goals, USEPA Region IX, Residential land use (Cancer benchmark value = 1E-06, Hazard Quotient = 0.1) (May 2000)

(4) The FL CGTLs were divided either by the number of detected carcinogens or by 10 for noncarcinogens to account for cumulative cancer effects or noncancer effects on the same target organ or system, respectively. GCTLs based on Primary and Secondary Standards were not adjusted.

(5) Rationale Codes

Selection Reason	Above Screening Levels (ASL)
Deletion Reason	Background Levels (BKG)
	No Toxicity Information (NTX)
	Essential Nutrient (NUT)
	Below Screening Level (BSL)

(7) Naphthalene screening values used for 2-methylnaphthlene

(8) The RfD for iron is not a proper RfD. See the uncertainty section.

Potential Rationale

- (1) Shapiro-Wilk W Test indicates data are normally distributed
- (2) Shapiro-Wilk W Test indicates data are log-normally distributed
- (3) Shapiro-Wilk W Test is inconclusive. Therefore, data are assumed to fit a log-normal distribution.
- (4) The appropriate 95% UCL exceeded the maximum; therefore the maximum was used.
- (5) There were less than 10 samples taken. Therefore, maximum detected concentration was used.
