Subject: Soil Sampling Report for Solid Waste Management Units 2, 3, 4, 5, and 22
Naval Station Mayport, Jacksonville, Florida

Dear Mr. Syme:

Tetra Tech NUS, Inc. (TtNUS) is pleased to submit the Soil Sampling Report for Solid Waste Management Units (SWMUs) 2, 3, 4, 5, and 22 at Naval Station (NAVSTA) Mayport, Florida. This report was prepared for the United States Navy, Naval Facilities Engineering Command Southeast (NAVFAC SE) under Contract Task Order (CTO) 0010 for the Comprehensive Long-term Environmental Action Navy (CLEAN) IV Contract Number N62467-04-D-0055.

The soil sampling effort was performed in general accordance with the Soil Sampling Work Plan (dated August 10, 2007) and was altered because of subsequent communications during NAVSTA Mayport Environmental Partnering Team (Partnering Team) meetings. The Soil Sampling Work Plan described the impact that regulatory revisions have had on the extent of soil contamination delineation at these SWMUs since the draft Corrective Measures Study (CMS) Report was submitted.

The objectives of the sampling program were detailed in the work plan and initially were intended to delineate surface and subsurface soil contamination within and around the SWMUs in excess of the revised Florida Department of Environmental Protection (FDEP) Soil Cleanup Target Levels (SCTLs). Additionally, the sampling results were to support land use control (LUC) boundary definition at the respective SWMUs; however, during the process, Partnering Team discussions and consensus changed the requirements for soil at these SWMUs, and the sampling program was discontinued. Per Partnering Team consensus, the purpose of this report is to report the data obtained during the sampling events.

Subsequent sections of this report include Site Background, Historical Sampling Results, Sampling Program, Sampling Activities, Sample Results, and Summary.

SITE BACKGROUND

SWMUs 2, 3, 4, and 5 are former landfill sites located in the southwestern portion of NAVSTA Mayport that operated from 1960 to 1985 as shown on Figure 1. SWMU 22 is a facility that was used for abrasive blasting and is located approximately 400 feet northeast of SWMU 2 (see Figure 1). Collectively, these SWMUs are referred to as the Landfill Area SWMUs. Wastes in each landfill were placed below the

groundwater level. Waste materials above the water level were burned on a daily basis. This practice has been discontinued; however, TtNUS was not able to determine the date it was suspended. Similar wastes were disposed of at each landfill and were reported to include waste oil, transmission fluid, hydraulic fluid, transformer oil, mercury waste from shipboard and onshore activities, paint waste, asbestos, solvents, plating solutions, pesticide cans, batteries, bilge water, magnaflux dye, penetrants, photo-processing waste, sanitary garbage, and construction rubble.

SWMU 22 consists of a prefabricated sheet metal building on a concrete pad located within a fenced area. An abrasive media was used from 1985 until 1992 for cleaning ground support equipment and vehicles. During a visual site inspection conducted in 1989, the blasting residue was observed to have been placed in approximately 100 55-gallon drums.

HISTORICAL SAMPLING RESULTS

The following section provides an overview of the surface and subsurface soil conditions at SWMUs 2, 3, 4, 5, and 22 and information regarding the revised chemicals of concern (COCs) for these SWMUs as presented in the work plan.

Historical Surface and Subsurface Soil Sampling

In the draft CMS Report for SWMUs 2, 3, 4, 5 and 22, soil was evaluated for corrective action independently at each SWMU due to the physical separation of the SWMUs. As a result of the alternative evaluations conducted in the CMS, it was recommended that LUCs and periodic site inspections be implemented at each SWMU. These recommendations were made to address varying degrees of contaminated surface and subsurface soils located throughout the SWMUs.

In January 2007, the Partnering Team agreed that the investigational data at these SWMUs may not be sufficient to delineate the boundaries of soil contamination under an industrial land use scenario.

The most recent surface and subsurface soil samples (prior to the sampling events in 2007 and 2008) were collected in 1994 and were evaluated based upon the appropriate regulatory criteria at that time. The FDEP SCTLs were revised and effective as of April 17, 2005. In the TtNUS Soil Sampling Work Plan (dated August 10, 2007), the concentrations of COCs detected in the surface and subsurface soil at SWMUs 2, 3, 4, 5, and 22 were compared with the revised SCTLs, and a determination was made regarding whether additional soil data was needed to sufficiently define the LUC boundaries at the SWMUs.

Subsequent to the Soil Sampling Work Plan, the Partnering Team held multiple discussions, and TtNUS completed an arsenic background study that was documented in the Arsenic Background Study Report dated September 24, 2008. The result of the study was the approval of a background concentration of 13.7 milligrams per kilogram (mg/kg) for arsenic at NAVSTA Mayport (documented in a FDEP letter dated September 25, 2008). The approved background concentration had a drastic affect on the sampling program and eliminated arsenic as a COC at all sites except SWMU 3, which had one historic soil sample that contained an arsenic concentration of 15.6 mg/kg.

Arsenic concentrations in all other soil samples reviewed were less than the background concentration. The initial sampling efforts documented in this report were performed prior to the approval of the revised background concentration for arsenic. Additionally, soil sampling in 1994 and before continued beyond water table depths. During Partnering Team meeting discussions, it was established that there was no need to continue this practice, and sampling would only be performed above the water table.

Revised Surface and Subsurface Soil COCs

In the 2004 draft CMS Report, surface and subsurface soil chemicals of potential concern (COPCs) were evaluated independently for SWMUs 2, 3, 4, 5, and 22 based upon the industrial direct exposure SCTLs in effect at that time. COPCs for each SWMU were independently re-evaluated to select the surface and

subsurface soil COCs to be carried forward in the corrective action. Both industrial and residential direct exposure SCTLs were considered during the re-evaluation to aid in delineating the boundaries of soil contamination at these SWMUs. The results identified in the work plan were as follows:

- Surface Soil COCs
 - SWMU 2 – No COCs
 - SWMU 3 – Antimony
 - SWMU 4 – Aroclor-1260, chlordane, chromium VI, cyanide, mercury, and silver
 - SWMU 5 – Benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; indeno(1,2,3-cd)pyrene; Aroclor-1260; antimony; arsenic; chromium VI; cyanide; and mercury
 - SWMU 22 – No COCs
- Subsurface Soil COCs
 - SWMU 2 – 4-Methylphenol, antimony, arsenic, and lead
 - SWMU 3 – Benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; indeno(1,2,3-cd)pyrene; and arsenic
 - SWMU 4 – 1,4-Dichlorobenzene; methylene chloride; 4-methylphenol; benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; bis(3-ethylhexyl)phthalate; chrysene; fluoranthene; indeno(1,2,3-cd)pyrene; naphthalene; Aroclor-1260; dieldrin; endosulfan I; antimony; arsenic; barium; chromium VI; mercury; selenium; and silver
 - SWMU 5 – 4-Methylphenol; benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; dibenzo(a,h)anthracene; indeno(1,2,3-cd)pyrene; Aroclor-1254; arsenic; barium; cadmium; chromium VI; cyanide; mercury; nickel; silver; and vanadium
 - SWMU 22 – Arsenic

In the work plan for this sampling effort, TtNUS compared the previous results presented in the draft CMS to the updated SCTLs. Additionally, specific polycyclic aromatic hydrocarbon (PAH) results were converted to a benzo(a)pyrene equivalent value and compared to the direct exposure SCTL for benzo(a)pyrene. During the re-evaluation of COPCs, leaching to surface water was not considered for SWMUs 2, 3, and 22 since these SWMUs are generally greater than 300 feet away from the nearest surface water body. However, leaching to surface water was considered for SWMUs 4 and 5 as there are surface water bodies located near the outer boundaries of these two SWMUs.

Based on the re-evaluation of COPCs, it was determined that there are no surface soil COCs present at SWMUs 2 and 22. Surface soil COPCs as reported in the work plan for SWMUs 3, 4, and 5 are as follows:

- SWMU 3 – Antimony (leaching)
- SWMU 4 – Aroclor-1260, chlordane, chromium, cyanide, mercury, and silver (leaching)
- SWMU 5
 - Aroclor-1260, antimony, chromium, cyanide, and mercury (leaching)
 - Benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; indeno(1,2,3-cd)pyrene; and arsenic (residential exposure)

Based on the re-evaluation of subsurface soil COPCs, the following COCs were identified in the work plan:

- SWMU 2
 - 4-Methylphenol and antimony (leaching)
 - Arsenic and lead (residential exposure)
- SWMU 3
 - Arsenic; benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; and indeno(1, 2, 3-cd)pyrene (residential exposure)

- SWMU 4
 - 1,4-Dichlorobenzene; methylene chloride; 4-methylphenol; fluoranthene; naphthalene; Aroclor-1260; dieldrin; endosulfan I; antimony; chromium; mercury; selenium; and silver (leaching)
 - Benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; indeno(1,2,3-cd)pyrene; bis(2-ethylhexyl)phthalate; arsenic; and barium (residential exposure)
- SWMU 5
 - 4-Methylphenol, Aroclor-1254, cadmium, chromium, cyanide, mercury, nickel, and silver (leaching)
 - Benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; dibenzo(a,h)anthracene; indeno(1,2,3-cd)pyrene; Aroclor-1254, arsenic, barium; and vanadium (residential exposure)
- SWMU 22
 - Arsenic (residential exposure)

Tables and figures from the 2007 Soil Sampling Work Plan depicting the sampling locations and analytical results are included in Attachment 1.

Groundwater investigation results at SWMUs 2, 3, 4, 5, and 22 are addressed in the draft CMS Report. Regulatory oversight responsibility of the sediments located in the ditches at SWMUs 2, 3, 4, 5, and 22 (as identified in the draft CMS) has been transferred from the Resource Conservation and Recovery Act Program to the FDEP Storm Water Program per an agreement reached at the Partnering Team meeting in January 2007. Neither of these was considered for further investigation in this effort.

SAMPLING PROGRAM

As detailed in the 2007 TtNUS Soil Sampling Work Plan, the objectives of the sampling program were to delineate surface and subsurface soil contamination in excess of the FDEP residential direct exposure SCTLs within and around the SWMUs. The data was to be used in support of defining the appropriate LUC boundaries at the respective SWMUs. The Soil Sampling Work Plan detailed the objectives for the sampling program. Since the Soil Sampling Work Plan was issued, the sampling program has been discussed by the Partnering Team on multiple occasions. Information from the Partnering Team meeting minutes is included below.

- July 2007: Action Item 01.07.1.6.2 required Diane Racine (NAVSTA Mayport) and Shina Ballard (TtNUS) to prepare a Technical Memorandum and Jim Cason (FDEP) to defer the sediments for SWMUs 2, 3, 4, 5 and 22 to the Storm Water Program. It was reported that this action item was ongoing as the memorandum was submitted, but had not been approved.
- May 2008: Field events previously scheduled for the week of April 28 were delayed because the SWMUs would be impacted by the results of the Arsenic Background Study. Additionally, the Work Plan for SWMUs 2, 3, 4, 5 and 22 defined the sample intervals for the confirmatory sampling, which were below the water table. After discovering the proposed soil sample locations were below the water table, a document review and search of historical topographical and aerial maps was performed to determine if there have been any significant changes in the makeup of the area around the proposed soil sample locations. The review resulted in an understanding that the area of the proposed soil sample locations had not changed significantly. Therefore, it was concluded that the sampling approach included in the Soil Sampling Work Plan should be modified to eliminate soil samples below the water table for metals analysis. It was recommended that the results of the Arsenic Background Study be given consideration when determining what additional soil samples need to be collected. Areas requiring confirmatory subsurface soil samples were to have samples

collected just above the water table (with special consideration given to the location of the smear zone).

The Partnering Team reached consensus to alter the sampling protocol for SWMUs 2, 3, 4, 5 and 22. Samples were to be collected only above the water table with consideration given to the smear zone. A work plan modification was not required.

- August 2008: The minutes included the following: “results of the arsenic background study will greatly impact the additional soil sampling required at these SWMUs. Sampling above the water table will be conducted in areas that still require delineation. SWMU 3 has one arsenic exceedance of the FDEP-approved NAVSTA Mayport background concentration for arsenic. SWMU 22 will have no LUCs for soil.”
- November 2008: Discussion concluded that since SWMUs 2, 3, 4, and 5 were originally classified as landfills, at a minimum, LUCs will be required and the sites included in annual inspections. LUCs were to prevent residential or residential-like uses and implement digging prohibitions. No additional sampling was necessary. This soil sampling report was to be prepared to report the results of the sampling already performed and include a recommendation for LUCs. The report would be followed by the Statements of Basis. SWMU 22 would be “No Further Action.”

The Partnering Team decisions changed the approach by eliminating the sampling of soil beneath the groundwater, by accepting the background concentration for arsenic, and by eliminating the need to establish LUC boundaries through sampling. These changes were incorporated into the program at various times, which is why there are some samples reported in this document from below the water table.

SAMPLING ACTIVITIES

TtNUS performed the following sampling activities during early 2008. Additional sampling was planned but not executed due to the Partnering Team discussions documented above.

- December 18, 2007: TtNUS sampled subsurface soil at SWMU 22. Samples were collected from five soil borings (MPT-22-SB01 through MPT-22-SB05). A rinsate blank (MPT22-RB01-121807) was also collected. The samples were sent to a laboratory for arsenic analysis.
- February 28 and 29, 2008: TtNUS collected surface and subsurface soil samples via hand auger at SWMUs 4 and 5. Two surface soil samples were collected at SWMU 5 from locations MPT-05-SS02 and MPT-05-SS04. Twenty-three subsurface soil samples were collected from four soil borings (MPT-05-SB01 through MPT-05-SB04) at SWMU 5 and four borings (MPT-04-SB02 through MPT-04-SB05) at SWMU 4. A soil boring was attempted at location MPT04-SB01, but could not be installed due to boring refusal issues. The samples were sent to the laboratory for metals analysis using United States Environmental Protection Agency (USEPA) Method 6010B and semivolatile organic compound (SVOC)/PAH analysis using USEPA Method 8270C. During this sampling, groundwater was encountered at varying depths of 3 to 8 feet below land surface.
- March 3, 2008: TtNUS collected surface soil samples from SWMU 5 at eight locations (MPT-05-SS05 through MPT-05-SS12). The soil samples were sent to the laboratory for metals analysis using USEPA Method 6010B and SVOC/PAH analysis using USEPA Method 8270C.

Surface soil samples were collected at SWMU 5 using disposable trowels. Subsurface soil samples were collected at SWMUs 2, 4, 5 and 22 using a 3-inch, inside diameter hand auger assembly. The surface and subsurface soil sampling locations are shown on Figure 2. Soil boring logs for the locations of the subsurface soil samples are provided in Attachment 2.

The samples were properly packaged and submitted along with chain-of-custody documentation to Gulf Coast Analytical Laboratories, Inc. in Baton Rouge, Louisiana. Each sample was analyzed for the parameters discussed above.

SAMPLE RESULTS

The soil sample results are detailed in this section. Surface soils at SWMU 5 will be presented first. Subsequently, the subsurface soil results for SWMUs 4, 5 and 22 will be presented.

Surface Soil

Ten surface soil samples were collected from sampling locations MPT-05-SB02 through MPT-05-SB12 at SWMU 5. The samples were analyzed for select PAH compounds using USEPA Method 8270C and metals using USEPA Method 6010B. In these 10 surface soil samples, only benzo(a)pyrene equivalents exceeded the residential SCTL in the soil samples from locations MPT-05-SB02 and MPT-05-SB10. The other analyte concentrations reported by the laboratory were less than the respective SCTL or NAVSTA Mayport background concentration. Table 1 provides the laboratory results for the most recent surface soil sampling. Figure 3 includes the sample locations where COCs exist at concentrations exceeding regulatory criteria from past and present sampling events. The laboratory data packages for the most recent sampling events are included in Attachment 3. Due to its large size, Attachment 3 is being provided on a compact disk.

COCs identified at concentrations exceeding regulatory criteria from the previous sampling events include antimony, benzo(a)pyrene equivalents, and benzo(a)pyrene. Tables and figures from the Soil Sampling Work Plan provide a summary of the historical sampling efforts and are included in Attachment 1. Please note that these tables and figures document exceedances based on regulatory criteria and background values in effect at the time of the Soil Sampling Work Plan preparation. The number of arsenic exceedances provided in these tables and figures were exaggerated due to comparison to the previous background concentration. Figure 3 compares all historical samples to the current criteria.

Subsurface Soil

Twenty-eight subsurface soil samples (see Table 2 for sample identifiers) were collected from SWMUs 4, 5 and 22. The samples were analyzed for select PAH compounds using USEPA Method 8270C and metals using USEPA Method 6010B. In the 28 subsurface soil samples collected during this phase of the investigation, only arsenic exceeded regulatory criteria and background concentrations. Specifically, arsenic was detected in sample MPT05-SB04-04-022808 at a concentration of 16.3 mg/kg. The other analyte concentrations reported by the laboratory were less than the respective SCTL or NAVSTA Mayport background concentration. Table 2 summarizes the results of the most recent subsurface soil sampling and Figure 4 graphically depicts the results from this round of sampling as well as historical results, which are in excess of current regulatory criteria and background concentrations. The laboratory data packages for the most recent sampling events are included in Attachment 3 (on compact disk).

COCs identified at concentrations exceeding regulatory criteria from the previous sampling events include antimony, arochlor-1254, barium, benzo(a)pyrene, benzo(a)pyrene equivalents, bis(2-ethylhexyl)phthalate, cadmium, copper, lead, methylene chloride, naphthalene, and vanadium. Tables and figures from the Soil Sampling Work Plan provide a summary of the historical sampling efforts and are included in Attachment 1. Please note that these tables and figures document exceedances based on regulatory criteria and background values in effect at the time of the Soil Sampling Work Plan preparation. The number of arsenic exceedances provided in these tables and figures were exaggerated due to comparison to the previous background concentration. Figure 4 compares all historical samples to the current criteria.

SUMMARY

TtNUS was contracted to perform surface and subsurface soil sampling at SWMUs 2, 3, 4, 5 and 22 to establish LUC boundaries. During the planning process and at various times after the Soil Sampling Work

Plan was approved, the Partnering Team reached consensus on items that affected the sampling program and what samples needed to be collected. The most significant change to this report was that the LUC boundaries could be established based on the landfill boundaries and no further delineation was required. Additionally, the Partnering Team reached consensus that the Soil Sampling Work Plan did not require modification or re-issuance. During this period, the Arsenic Background Study was approved and established a revised background concentration for arsenic of 13.7 mg/kg.

In 2007 and 2008, multiple sampling events were performed and included the collection of 10 surface soil and 28 subsurface soil samples. As stated above, the decision was made to discontinue this sampling effort and prepare a written report documenting the results. In the 10 surface soil samples collected, only benzo(a)pyrene was detected in excess of regulatory criteria. Of the 28 subsurface soil samples collected, only one sample contained levels of any COC (arsenic) in excess of regulatory criteria and background concentrations.

If you have any questions with regard to this submittal, please feel free to contact me at (904) 730-4669, extension 215, or via e-mail at gregory.roof@tetrattech.com.

Sincerely,

Gregory S. Roof, P.E.

CERTIFICATION

The information contained in this report is based on the recent sampling and associated information detailed in the text and appended to this letter report. If conditions are determined to exist that differ from those described, the undersigned engineer should be notified to evaluate the effects of any additional information on the information described in this report. This Soil Sampling Report was developed for SWMUs 2, 3, 4, 5, and 22 at the Naval Station Mayport, Jacksonville, Florida, and should not be construed to apply to any other site.

Notes:

Results are in milligrams per kilogram (mg/kg).

Bold values indicate an exceedance of regulatory criteria and background concentration.

bls = Below land surface.

NC = No criteria. FDEP requires these analytes to be evaluated using a benzo(a)pyrene equivalent calculation. The result of the calculation is compared to the benzo(a)pyrene criteria.

NA = No applicable background concentration.

ND = Not detected.

U = The analyte was not detected in excess of the detection limit, whose value is shown.

J = The analyte was detected at the shown estimated concentration.

Notes:

Results are in milligrams per kilogram (mg/kg).

Bold values indicate an exceedance of regulatory criteria.

bls = Below land surface.

NC = No criteria. FDEP requires these analytes to be evaluated using a benzo(a)pyrene equivalent calculation. The result of the calculation is compared to the benzo(a)pyrene criteria.

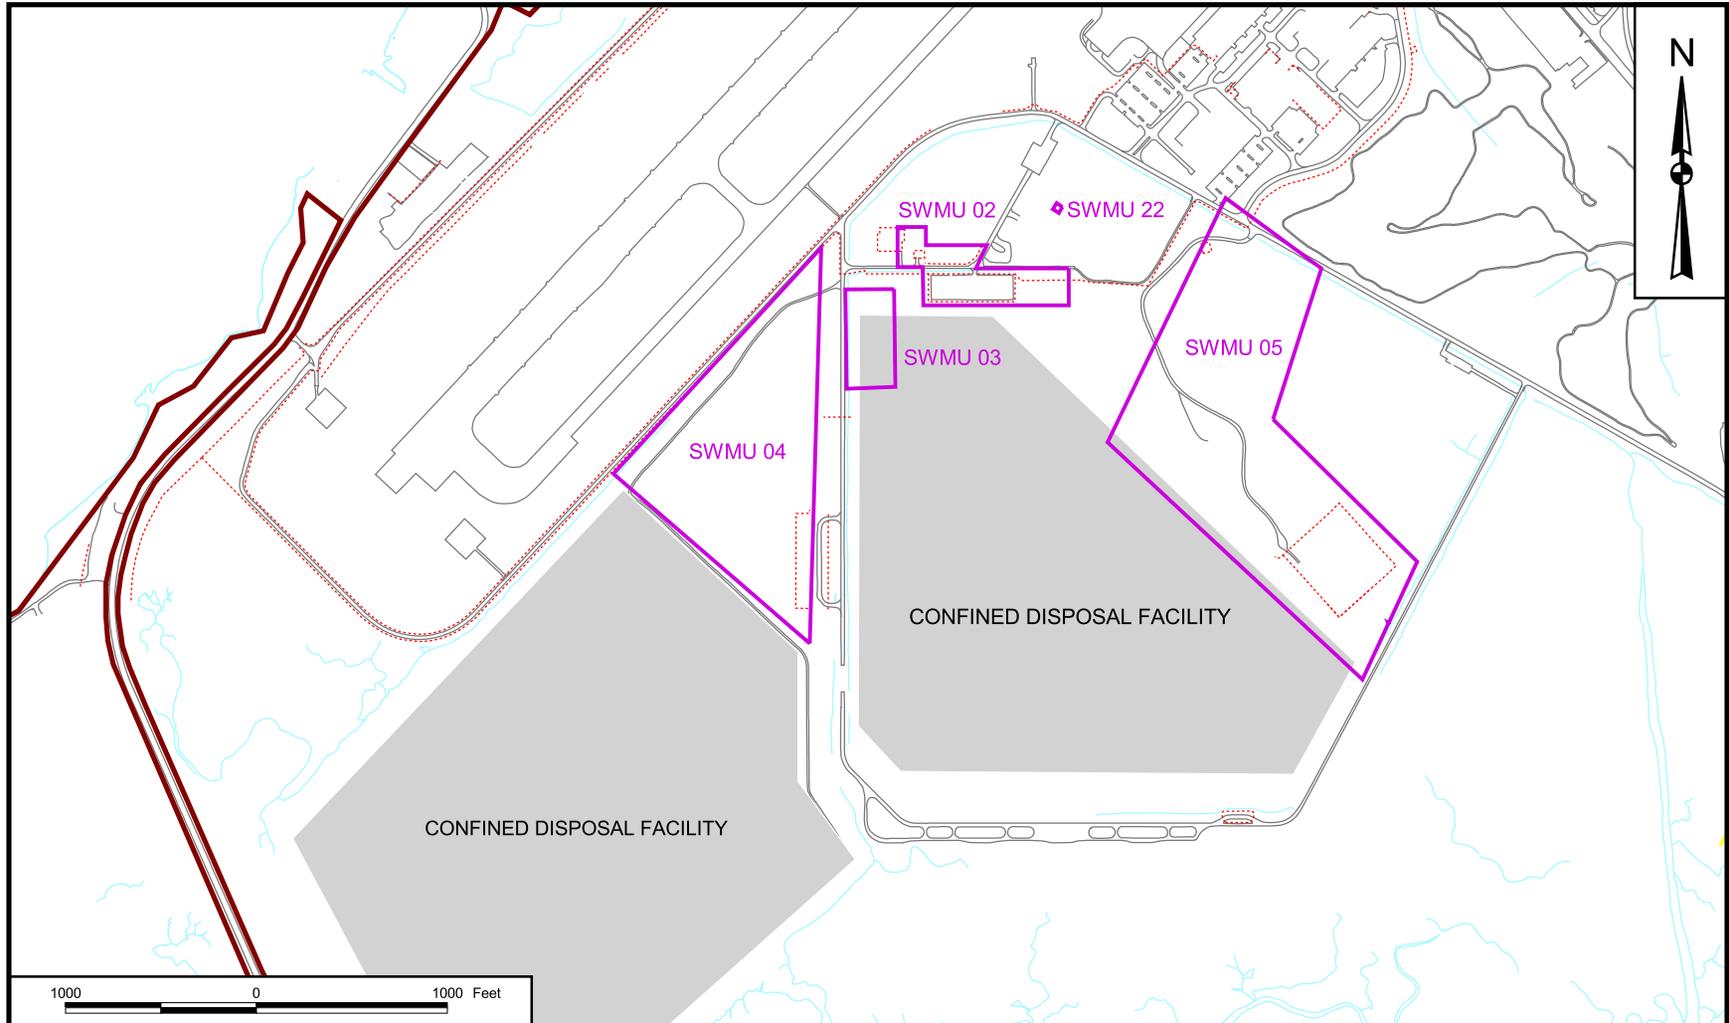

NA = No applicable background concentration.

ND = Not detected.

U = The analyte was not detected in excess of the detection limit, whose value is shown.

J = The analyte was detected at the shown estimated concentration.

Note: ¹ Site concentrations for carcinogenic polycyclic aromatic hydrocarbons must be converted to Benzo(a)pyrene equivalents before comparison with the appropriate direct exposure SCTL for Benzo(a)pyrene using the approach described in the February 2005 'Final Technical Report: Development of Cleanup Target Levels for Chapter 62-777, F.A.C.' Contaminants considered for subsurface soil benzo(a)pyrene equivalent calculations at SWMU 5 are benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene.

COMMENTS

12/17/07

Personnel: Donald Harrison (DH)

- Obtained 4 drums from FMM Drum Services, Inc. for work at SWMUs 2, 3, 4, 5 and 22

1300 - DH at commercial gate at NASTA Mayport

1315 - DH off loads 4 empty drums in bay at drum storage area.

- DH notes 6 drums (full) that are hidden and reports drums to David Sletten
- Drums are from SWMUs 44 and 45 and have ~~been~~ not been included in outgoing drum shipment.

Rinse Block	MPT22-RB01-121807	1230	↓	↓	

1315 - DH at SWMN 2 collecting soil samples to 7ft. bgs

1430 - Groundwater Table at ~ 4 ft. bgs. DH unable to get below ~ 5.5 ft. bgs to collect soil sample.
- will not be able to reach 7ft. bgs with hand auger.

1510 - DH takes soil cuttings collected in 5-gallon buckets to drum storage area to put into drum

1545 - Soil cuttings stored in Drum # CTO10-001

- Drum is ~ 1/4 full from soil cuttings.

1610 - DH leaves NAUSTA Mayport for office

112606203

SWMU 2 and 4 Soil Sampling CTO 10 USNAVY

Personnel: Donald Hardtson (DH)

PPE: Level D

Objective: Collect soil samples via Hand Auger at SSMUs 2 and 4

- 0730 - DH at office preparing for days activities
- 0900 - DH leaves for NAUSTA Mayport from office
- 0945 - DH at Building 190 to obtain access to Restricted Mayport Weapons Area
- 1015 - DH collecting GPS coordinates for CTO 33
- 1100 - DH at the backside of building 1563 in Restricted Weapons area attempting to collect soil samples for SSMU 2
- 1135 - Ground water table at ~2 feet bgs. Unable to reach 7 feet bgs to collect soil samples
- 1205 - DH moving locations at SSMU 4. Locations were initially placed in the wrong locations.
- 1255 - DH unable to reach desired sampling depths at SSMU 4. Ground water table is between 3 and 4 feet bgs. at locations checked. Will not be able to collect soil samples at this SSMU via Hand Auger.
- 1345 - DH at drum storage area collecting empty drums to bring back to office.
- 1420 - DH leaves NAUSTA Mayport for office.
 - Stops to buy small cooler to ship samples to lab.

DH

DH 1

Overview

The sample set for CTO 0010, NAVSTA Mayport, SDG 207122033, consists of five (5) soil environmental samples and one rinsate blank (MPT22-RB01-121807). No field duplicates were included within this SDG.

All samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS on December 18, 2007 and analyzed by Gulf Coast Analytical Laboratories, Inc. under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Arsenic analyses were conducted using SW-846 method 6010B.

These data were evaluated based on the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Calibration Verification Results
- Laboratory Blank Analyses
- * • ICP Interference Check Sample Results
- * • Matrix Spike Results
- * • Laboratory Control Sample Results
- * • ICP Serial Dilution Results
- * • Sample Quantitation
- * • Detection Limits

* - All quality control criteria were met for this parameter.

TO: S. BALLARD – PAGE 2
DATE: JANUARY 31, 2008

Notes

The following analyte was detected in the laboratory method/preparation blanks at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
arsenic ⁽¹⁾	0.11 mg/L	0.55 mg/kg

⁽¹⁾ Maximum concentration present in a preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation actions were warranted as a result of blank contamination. Field blanks are not qualified for blank contamination.

Executive Summary

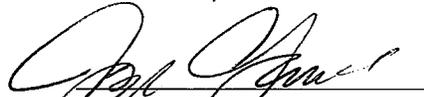

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DOT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech NUS, Inc. **Report:** 207122033

Contract Task Order No.: 0010

Site: NAVSTA Mayport

Project Manager: Shina Ballard

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

Additional Flags:

I – The reported value is between the laboratory method detection limit and the practical quantitation limit.

METALS

In the SW-846 6010B analysis, a chemical or physical interference necessitated a dilution for sample 20712203302 (MPT22-SB02-04-121807) . This is reflected in the elevated reporting limits.

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations Utilized in this Report

ND	Indicates the result was Not Detected at the specified RDL
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
RDL	Reporting Detection Limit
00:00	Reported as a time equivalent to 12:00 AM

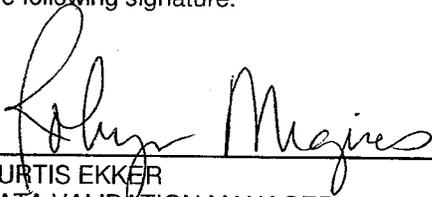

Reporting Flags Utilized in this Report

J	Indicates an estimated value
U	Indicates the compound was analyzed for but not detected
B	(ORGANICS) Indicates the analyte was detected in the associated Method Blank
B	(INORGANICS) Indicates the result is between the RDL and MDL

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with ISO Guide 25 and NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with the terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer-readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

DATE: APRIL 29, 2008

These data were evaluated based on the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Calibration Verification Results
 - Laboratory Method / Preparation Blank Analyses
- * • ICP Interference Check Sample Results
- * • Laboratory Control Sample Results
 - Laboratory Duplicate Results
- * • Matrix Spike Results
 - ICP Serial Dilution Results
- * • Sample Quantitation
- * • Detection Limits

* - All quality control criteria were met for this parameter.

Laboratory Duplicate Results

Laboratory duplicate imprecision (relative percent difference > 35%) was noted for barium affecting samples MPT04-SB03-11-022908, MPT04-SB04-05-022908, MPT04-SB04-07-022908, MPT04-SB04-09-022908 and MPT04-SB04-11-022908. The positive results reported for barium in the affected samples were qualified as estimated, "J".

ICP Serial Dilution Results

The ICP serial dilution percent difference was > 10% quality control limit for barium affecting samples MPT04-SB03-11-022908, MPT04-SB04-05-022908, MPT04-SB04-07-022908, MPT04-SB04-09-022908 and MPT04-SB04-11-022908. The positive results reported for barium in the affected samples were qualified as estimated, "J".

The ICP serial dilution percent difference was > 10% quality control limit for vanadium affecting samples MPT05-SB01-04-022808, MPT05-SB02-04-022808, MPT05-SB02-06-022808, MPT05-SB02-08-022808, MPT05-SB02-10-022808, MPT05-SB03-04-022808, MPT05-SB03-06-022808, MPT05-SB04-04-022808, MPT05-SB04-06-022808, MPT05-SB04-08-022808, MPT05-SB04-10-022808 and MPT05-SS02-01-022808. The positive results reported for vanadium in the affected samples were qualified as estimated, "J".

Notes

The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Arsenic ⁽¹⁾	0.0043 mg/kg	0.0215 mg/kg
Barium ⁽²⁾	0.018 mg/kg	0.09 mg/kg
Barium ⁽³⁾	0.029 mg/kg	0.145 mg/kg
Vanadium ⁽²⁾	0.086 mg/kg	0.43 mg/kg

(1) Maximum concentration present in a laboratory blank affecting samples MPT04-SB02-07-022908, MPT05-SB02-08-022808, MPT05-SB02-10-022808, MPT05-SS04-01-022808, MPT05-SB04-06-022808, MPT04-SB02-09-022908, MPT04-SB02-11-022908, MPT04-SB03-05-022908, MPT04-SB03-07-022908, MPT04-SB03-09-022908.

TO: S. BALLARD – PAGE 3
DATE: APRIL 29, 2008

- (2) Maximum concentration present a soil preparation blank affecting samples MPT04-SB02-05-022908, MPT04-SB02-07-022908, MPT04-SB02-09-022908, MPT04-SB02-11-022908, MPT04-SB03-05-022908, MPT04-SB03-07-022908, MPT04-SB03-09-022908, MPT05-SB01-04-022808, MPT05-SB02-04-022808, MPT05-SB02-06-022808, MPT05-SB02-08-022808, MPT05-SB02-10-022808, MPT05-SB03-04-022808, MPT05-SB03-06-022808, MPT05-SB04-04-022808, MPT05-SB04-06-022808, MPT05-SB04-08-022808, MPT05-SB04-10-022808, MPT05-SS02-01-022808 and MPT05-SS04-01-022808.
- (3) Maximum concentration present a soil preparation blank affecting samples MPT04-SB03-11-022908, MPT04-SB04-05-022908, MPT04-SB04-07-022908, MPT04-SB04-09-022908, MPT04-SB04-11-022908, MPT05-SS05-01-030308, MPT05-SS06-01-030308, MPT05-SS07-01-030308, MPT05-SS08-01-030308, MPT05-SS09-01-030308, MPT05-SS10-01-030308, MPT05-SS11-01-030308 and MPT05-SS12-01-030308.

An action level of 5X the maximum concentration has been used to evaluate the sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation actions were warranted as a result of laboratory blank contamination.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: Laboratory duplicate imprecision was noted for barium affecting several samples. The ICP serial dilution percent differences were > 10% quality control limit for barium and vanadium affecting several samples.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O - Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DOT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech NUS, Inc. **Report:** 208030427

Contract Task Order No.: 0010

Site: NAVSTA Mayport

Project Manager: Shina Ballard

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

Additional Flags:

I – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

SEMI-VOLATILES MASS SPECTROMETRY

Samples 20803042718 (MPT04-SB03-05-022908) and 20803042727 (MPT05-SS06-01-030308) exhibited a recovery for the internal standard 1,4-Dichlorobenzene d4 outside of the inclusive range of -50% to +100% relative to the midpoint of the initial calibration. However, no target analytes are quantitated using 1,4-Dichlorobenzene d4.

In the SW-846 8270C analysis of analytical batch 368921, Dibenz(a,h)anthracene has a %D of -26.2% in the CCV, which is outside of project criteria of $\pm 20\%$.

In the SW-846 8270C analysis, the recovery for the surrogate, Terphenyl-d14 recovery was above the upper project control limit for samples MB (580708), LCSD (580710), and 20803042722 (MPT04-SB04-05-022908). The recovery for the surrogate, 2-Fluorobiphenyl was above the upper project control limit for sample 20803042725 (MPT04-SB04-11-022908).

SEMI-VOLATILES GAS CHROMATOGRAPHY

In the SW-846 8082 analysis, samples 20803042707 (MPT05-SB03-04-022808), 20803042708 (MPT05-SB03-06-022808) and 20803042710 (MPT05-SB04-04-022808) required a dilution prior to analysis to eliminate interference from non-target background. The dilutions are reflected in elevated detection limits. The recovery for the surrogate is reported as "D", diluted out.

METALS

In the SW-846 6010B analysis, a chemical or physical interference necessitated a dilution for samples 20803042705 (MPT05-SB02-08-022808), 20803042706 (MPT05-SB02-10-022808), 20803042709 (MPT05-SS04-01-022808), 20803042711 (MPT05-SB04-06-022808), 20803042730 (MPT05-SS09-01-030308), and 20803042732 (MPT05-SS11-01-030308). This is reflected in elevated detection limits.

In the SW-846 6010B analysis for prep batch 368455, the MS recovery was outside the control limits for Vanadium. The LCS recovery was within control limits. This indicates the analysis is in control and the sample is affected by matrix interference. A post-digestion spike was performed on the QC sample for this batch with a recovery of 101%. Vanadium is flagged "E", estimated on the serial dilution form due to the fact that the percent difference between the original sample result and the serial dilution result for the batch QC sample is greater than 10. A chemical or physical interference is suspected.

In the SW-846 6010B analysis for prep batch 368456, the MS recovery was outside the control limits for Barium. The LCS recovery was within control limits. This indicates the analysis is in control and the sample is affected by matrix interference. A post-digestion spike was performed on the QC sample for this batch with a recovery of 87%. The Sample/Duplicate RPD for Barium was outside the control limits. The heterogeneous nature of the QC sample is believed to be responsible for this. The Sample/Duplicate RPD for Arsenic is not applicable because the sample and/or duplicate concentration is less than five times the reporting limit. Barium is flagged "E", estimated on the serial dilution form due to the fact that the percent difference between the original sample result and the serial dilution result for the batch QC sample is greater than 10. A chemical or physical interference is suspected.

OVERVIEW

The sample set for NAVSTA MAYPORT, SDG 208030427 consists of thirty three (33) solid environmental samples. All samples were analyzed for select semivolatile organic compounds (SVOC) and Aroclor-1254.

The samples were collected by Tetra Tech NUS on February 28 and 29, 2008 and analyzed by Gulf Coast Analytical Laboratories, Inc. All analyses were conducted in accordance with SW-846 Methods 8270C and 8082 analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data completeness
- * • Holding times
- * • GC/MS Tuning
- * • Initial/continuing calibrations
- * • Laboratory method blank results
- * • Surrogate Recoveries
- * • Blank Spike/Blank Spike Duplicate Results
- * • Matrix Spike/Matrix Spike Duplicate Results
- * • Internal Standards
- * • Compound Quantitation

- * • Compound Identification
- * • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Semivolatiles

The surrogate nitrobenzene-d5 had a percent recovery greater than the quality control limit for sample MPT04-SB04-05-022908. No action was taken on this basis because only one surrogate in the base/neutral fraction was outside of criteria.

The surrogate 2-fluorobiphenyl had a percent recovery greater than the quality control limit for sample MPT04-SB04-11-022908. No action was taken on this basis because only one surrogate in the base/neutral fraction was outside of criteria.

The surrogate nitrobenzene-d5 had a percent recovery greater than the quality control limit for the method blank (MB580708) and laboratory control sample duplicate (LCSD580710). No action was taken on this basis because QC samples are not qualified.

Polychlorinated biphenyls

Samples MPT05-SB03-04-022808, MPT05-SB03-06-022808, and MPT05-SB04-04-022808 were analyzed at 10, 10, and 50 times dilutions, respectively. Elevated detection limits were reported due to the dilutions. The dilutions were required because of high concentrations of hydrocarbon background in the samples.

Additional Comments: Positive results less than the reporting limit (RL) were qualified as estimated, J, due to uncertainty near the detection limit.

The laboratory reported dibenzo(a,h)anthracene for 13 samples and bis(2-ethylhexyl)phthalate for ~~14~~¹² samples. The reviewer was unable to reconcile the compound list that each sample was to be analyzed for. No action was taken on this basis.

5-8-08
JAI

EXECUTIVE SUMMARY

Laboratory Performance Issues: Surrogate recovery noncompliances in two samples did not result in the qualification of the any data.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October 1999), and Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for Environmental Laboratories.

Attachments:

- Appendix A – Qualified Analytical Results
- Appendix B – Results as Reported by the Laboratory
- Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $> 25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

Lab Name: GCAL

Sample ID: MPT05-SB03-06-022808

Lab Code: LA024 Case No.: _____

Contract: _____

Matrix: Soil

SAS No.: _____ SDG No.: 208030427

Sample wt/vol: 30.4 Units: g

Lab Sample ID: 20803042708

Level: (low/med) LOW

Date Collected: 02/28/08 Time: 1230

% Moisture: 28.0 decanted: (Y/N) _____

Date Received: 03/04/08

GC Column: RTX-35MS-3 ID: .25 (mm)

Date Extracted: 03/08/08

Concentrated Extract Volume: 10000 (μL)

Date Analyzed: 03/12/08 Time: 1358

Soil Aliquot Volume: _____ (μL)

Dilution Factor: 10 Analyst: TLS

Injection Volume: 1 (μL)

Prep Method: 3550B

GPC Cleanup: (Y/N) N pH: _____

Analytical Method: SW-846 8082

Prep Batch: 368529 Analytical Batch: 369050

Sulfur Cleanup: (Y/N) N Instrument ID: GCS18A

CONCENTRATION UNITS: ug/kg

Lab File ID: 2080311/sv18a043

CASE NARRATIVE

Client: Tetra Tech NUS, Inc. **Report:** 208030427

Contract Task Order No.: 0010

Site: NAVSTA Mayport

Project Manager: Shina Ballard

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

Additional Flags:

I – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

SEMI-VOLATILES MASS SPECTROMETRY

Samples 20803042718 (MPT04-SB03-05-022908) and 20803042727 (MPT05-SS06-01-030308) exhibited a recovery for the internal standard 1,4-Dichlorobenzene d4 outside of the inclusive range of -50% to +100% relative to the midpoint of the initial calibration. However, no target analytes are quantitated using 1,4-Dichlorobenzene d4.

In the SW-846 8270C analysis of analytical batch 368921, Dibenz(a,h)anthracene has a %D of -26.2% in the CCV, which is outside of project criteria of $\pm 20\%$.

In the SW-846 8270C analysis, the recovery for the surrogate, Terphenyl-d14 recovery was above the upper project control limit for samples MB (580708), LCSD (580710), and 20803042722 (MPT04-SB04-05-022908). The recovery for the surrogate, 2-Fluorobiphenyl was above the upper project control limit for sample 20803042725 (MPT04-SB04-11-022908).

SEMI-VOLATILES GAS CHROMATOGRAPHY

In the SW-846 8082 analysis, samples 20803042707 (MPT05-SB03-04-022808), 20803042708 (MPT05-SB03-06-022808) and 20803042710 (MPT05-SB04-04-022808) required a dilution prior to analysis to eliminate interference from non-target background. The dilutions are reflected in elevated detection limits. The recovery for the surrogate is reported as "D", diluted out.

METALS

In the SW-846 6010B analysis, a chemical or physical interference necessitated a dilution for samples 20803042705 (MPT05-SB02-08-022808), 20803042706 (MPT05-SB02-10-022808), 20803042709 (MPT05-SS04-01-022808), 20803042711 (MPT05-SB04-06-022808), 20803042730 (MPT05-SS09-01-030308), and 20803042732 (MPT05-SS11-01-030308). This is reflected in elevated detection limits.

In the SW-846 6010B analysis for prep batch 368455, the MS recovery was outside the control limits for Vanadium. The LCS recovery was within control limits. This indicates the analysis is in control and the sample is affected by matrix interference. A post-digestion spike was performed on the QC sample for this batch with a recovery of 101%. Vanadium is flagged "E", estimated on the serial dilution form due to the fact that the percent difference between the original sample result and the serial dilution result for the batch QC sample is greater than 10. A chemical or physical interference is suspected.

In the SW-846 6010B analysis for prep batch 368456, the MS recovery was outside the control limits for Barium. The LCS recovery was within control limits. This indicates the analysis is in control and the sample is affected by matrix interference. A post-digestion spike was performed on the QC sample for this batch with a recovery of 87%. The Sample/Duplicate RPD for Barium was outside the control limits. The heterogeneous nature of the QC sample is believed to be responsible for this. The Sample/Duplicate RPD for Arsenic is not applicable because the sample and/or duplicate concentration is less than five times the reporting limit. Barium is flagged "E", estimated on the serial dilution form due to the fact that the percent difference between the original sample result and the serial dilution result for the batch QC sample is greater than 10. A chemical or physical interference is suspected.

MISCELLANEOUS

DoH ELCP certification # E87854

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations Utilized in this Report

ND	Indicates the result was Not Detected at the specified RDL
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
RDL	Reporting Detection Limit
00:00	Reported as a time equivalent to 12:00 AM

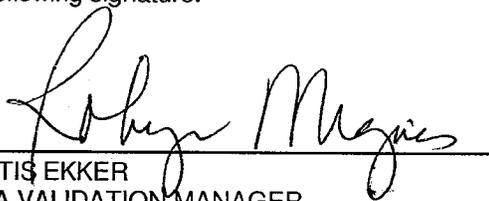

Reporting Flags Utilized in this Report

J	Indicates an estimated value
U	Indicates the compound was analyzed for but not detected
B	(ORGANICS) Indicates the analyte was detected in the associated Method Blank
B	(INORGANICS) Indicates the result is between the RDL and MDL

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with ISO Guide 25 and NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with the terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer-readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

called out in the narrative

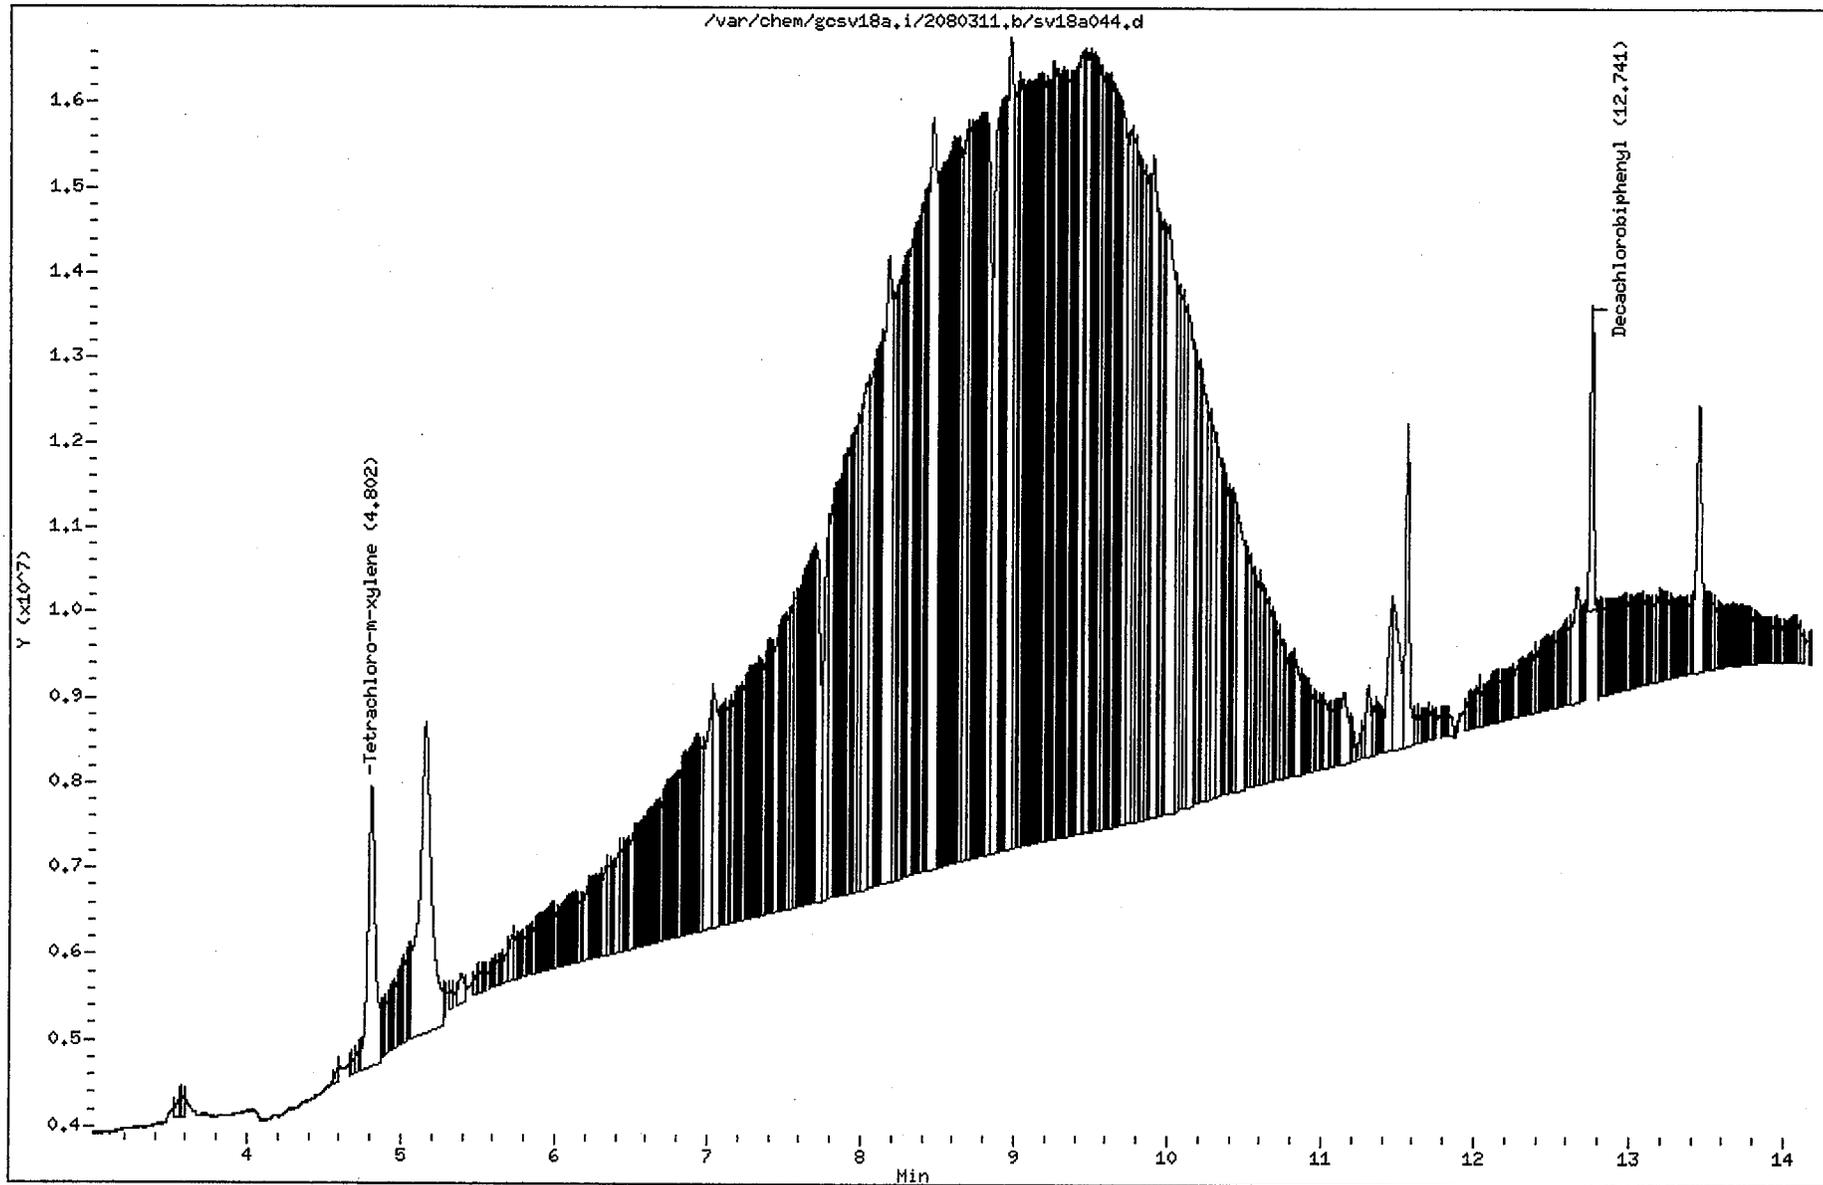

Data File: /var/chem/gcsvg18a.i/2080311.b/sv18a042.d
Date : 12-MAR-2008 13:40
Client ID:
Sample Info: 20803042707x10
Volume Injected (uL): 1.0
Column phase: RTX-35MS-30M

Instrument: gcsvg18a.i
Operator: t1s
Column diameter: 0.32

Data File: /var/chem/gcsv18a.i/2080311.b/sv18a044.d
Date: 12-MAR-2008 14:15
Client ID:
Sample Info: 20803042710x50
Volume Injected (uL): 1.0
Column phase: RTX-35MS-30M

Instrument: gcsv18a.i
Operator: t1s
Column diameter: 0.32

Data File: /var/chem/gosv18a.i/2080311.b/sv18a027.d
Date : 12-MAR-2008 01:13
Client ID:
Sample Info: 20803042712*1
Volume Injected (uL): 1.0
Column phase: RTX-35MS-30H

Instrument: gosv18a.i
Operator: tjs
Column diameter: 0.32
