RE: Revised Long-term Monitoring Plan for Selected Remedy for Solid Waste Management Units 1 through 7, 14, 15, 22 through 25, and Area of Concern C, Revision 1, Naval Station Mayport, USEPA ID #FL9 170 024 260, Mayport, Florida (Tetra Tech NUS, October 6, 2010)

Dear Mr. Syme:

I have reviewed the above document dated October 6, 2010 which was received on October 7, 2010, and was prepared under Contract Task Order JM32. The purpose of this Long Term Monitoring Program (LTMP) is to evaluate the selected corrective measure and optimize the sampling strategy and data to develop a long-term monitoring plan that contains a UFP-SAP for use by others. Per the LTMP, groundwater will be monitored for COCs and natural attenuation parameters to assess the effectiveness of natural attenuation as a corrective measure for these SWMUs and AOC. The LTMP will consist of quarterly sampling for one year. Monitoring wells will be sampled to monitor groundwater plume size, chemical concentrations, and movement of the plume. After one year of monitoring, a review of site conditions for these SWMUs and AOC will be conducted to evaluate the corrective measure strategy. I am in concurrence with the Navy and TtNUS on their stated purpose/objective for this LTMP. However, please be aware of, and respond to, my recent comments concerning this LTMP and the Navy's responses to my earlier comments within the upcoming quarterly groundwater monitoring documents.

Thank you for the opportunity to review this document. If you require additional clarification or other assistance, please feel free to contact me at 850/245-8999.

Sincerely,

John Winters, P.G.
Remedial Project Manager
