**RE: Corrective Measure Implementation Plan, Revision 3, SWMU 17,
Carbonaceous Fuel Boiler, Naval Station Mayport, USEPA ID #FL9 170 024
260, Mayport, Florida (Tetra Tech NUS, Inc., April 13, 2011)**

Dear Mr. Syme:

I have reviewed the subject document which was dated April 13, 2011 and was received on June 29, 2011. This report was prepared under Contract Task Order Number 0033. The objective of this Corrective Measures Implementation Plan (CMIP) is to provide information on how the Corrective Measures selected in the Statement of Basis (SB) for Solid Waste Management Unit (SWMU) 17 are implemented, maintained, and monitored.

This CMIP states "The RCRA Facility Investigation (RFI) and Corrective Measures Study (CMS) for SWMU 17 were submitted to the FDEP in December 1996 and March 2003, respectively. The RFI concluded that SWMU 17 has been impacted by low concentrations of polycyclic aromatic hydrocarbons (PAHs) in soil and ammonia, manganese, and iron in groundwater. Recent groundwater sampling indicates that groundwater contamination is not a concern at SWMU 17. Corrective measures recommended for surface soils in the CMS and selected in the SB are LUCs (Land Use Controls) including ICs (Institutional Controls). LUCs are in place to prevent the site from being used for residential purposes. LUCs will be maintained until the concentrations of contaminants of concern (COCs) in the soil are at such levels to allow for the unrestricted use and unlimited exposure of the SWMU 17 property as determined by the FDEP."

I am in concurrence with the Corrective Measures selected for SWMU 17 and with the information provided in this CMIP which outlines how they are to be implemented, maintained, and monitored.

SWMU 17, Final CMIP, Rev. 3
Naval Station Mayport
