RE: Final Work Plan for Contaminant Source Investigation, Study Area 38, Naval Training Center Orlando, Orlando, Florida.

Dear Mrs. Nwokike:

I have completed my review of the Final Work Plan for Contaminant Source Investigation, Study Area 38, Naval Training Center Orlando, dated May 2007 (received May 14, 2007), prepared and submitted by Tetra Tech NUS, Inc. Overall, the Work Plan appears adequate for its intent. However, I recommend that surveying the well locations for their latitude and longitude, and especially the top-of-well casing elevations, be added to the Work Plan in order to evaluate groundwater flow and groundwater/surface water interaction. I could find no mention of this in the Work Plan.

If I can be of any further assistance with this matter, please contact me at (850) 245-8997.

Sincerely,

David P. Grabka, P.G.
Remedial Project Manager
