Mr. Thomas W. Moody, P.E.
Special Programs Supervisor
Department of Environmental Regulation
160 Governmental Center
Pensacola, Florida 32501-5794

Ref: Hazardous Waste Surface Impoundment, Navy Public Works Center, Pensacola
Florida - Ground Water Monitoring Program

Dear Mr. Moody:

In performance of the subject monitoring program, analyses of down gradient and background wells at the Hazardous Waste Treatment Facility for indicators of ground water contamination were performed in November 1983. Student-t testing indicated significantly higher concentrations of total organic carbon (TOC) and specific conductance in certain wells. Retesting in February 1984 verified the significance of high TOC in one down gradient well and t o e - tivity in each well. Details are available in the facilities Annual Ground-water Monitoring Report which has been submitted to your office.

Per 40 CFR 265.93(d)(1), this letter serves as formal notification that this facility may be affecting groundwater quality. An Assessment Plan is being prepared.

Sincerely,

E. A. PIKE, P.E.
Environmental Engineer
By direction of the
Commanding Officer
