RE: Plans Prepared by Ecology and Environment, Inc.

Dear Sir:

The following comments are from my review of the plans prepared by Ecology and Environment, Inc. Most items just need further clarification.

HEALTH AND SAFETY PLAN:

Section 3.3 - Site Entry Procedures

This speaks to boundaries being established for the affected area. Will signs be used to separate the different zones? Will the operation be 24 hours? If not, will there be security on site during non-working hours?

Section 3.5 - Emergency Equipment and Procedures

Describe what role NAS Fire Department will have in the entire project.

Will the Navy Ambulance or Escambia county Ambulance be transporting any victims? Pre-hospital notification of the contamination must be given.

NOTE: It is suggested that a telephone or cellular phone be on site so any emergency can be reported quickly.

Section 3.7 - Communications

It might be advisable for NAS Fire Department to have a radio on the frequency being used for on site work. They could then communicate directly in the event of an emergency.

Site Specific Plans (General Comments)

Any situation or emergency that occurs which may affect the waterways or other areas in Escambia County should be reported to the Emergency Management Office. The dispatcher for this office can be reached by dialing 9-1-1.

Before work actually starts at each site, it would be beneficial for emergency response agencies to have a detailed map showing routes to the site as well as safe and hot zones. This includes any response agencies in Escambia County as well - such as ambulance, fire and emergency management. The response of off base agencies should be at the request of NAS personnel.

Sincerely yours,

Janice R. Kilgore
Coordinator
Escambia County Emergency
Management
