SITE 38 (OPERABLE UNIT 11)
EXECUTIVE SUMMARY

This report summarizes additional groundwater sampling activities conducted at Site 38 (Operable Unit 11) at the Naval Air Station Pensacola. Groundwater samples were collected from December 7-13, 2000, using low-flow techniques to obtain samples exhibiting low turbidity. The samples were submitted for selected volatile organic compound (VOC), semi-volatile organic compound (SVOC) and metal analysis as outlined in the Site 38 Re-Sampling Memorandum. Selected wells were also sampled for monitored natural attenuation (MNA) parameters. This report presents the results of the sampling and evaluates the applicability of MNA at the site.
