RE: Sampling and Analysis Plans for Site Characterization at Installation Restoration for Sites 44 (Former UST Site 3221 SW), 45 (Building 603 Lead Site), and 46 (Former Building 72) NAS Pensacola, Florida

Dear Mr. Hill,

The Department has reviewed the subject documents dated April 2005, (received via Tetra Tech IR Portal May 4, 2004). The Department finds the documents to be adequate for their intent and have the following comment which applies to all the subject documents listed above:

1. **Surface Soil Sampling Plan:** The phase I approach proposed in this section is adequate for its intent. Phase II sampling locations should be placed to accurately represent the conditions of the site. When using 95% UCL as a remedial alternative for the surface soil it is important to have a data set that accurately represents the conditions at the site. When calculating the data the Department recommends using FLUCL.

If I can be of any further assistance with this matter, please contact me at (850) 245-8998

Sincerely,

Tracie L. Vaught
Remedial Project Manager
