1.0 INTRODUCTION

Tetra Tech NUS, Inc. (Tetra Tech) has prepared this technical memorandum (memo) for the Underground Storage Tank (UST) Site 21 located at Naval Air Station (NAS) Pensacola, Florida. This memo summarizes the second quarterly groundwater monitoring sampling event and evaluates the data collected in accordance with the Uniform Federal Policy (UFP) Sampling and Analysis Plan (SAP) Quarterly Groundwater Sampling UST 21, NAS Pensacola, Florida. This memo was prepared under the Comprehensive Long-Term Environmental Action Navy (CLEAN) Contract Number N62470-08-D-1001, Contract Task Order (CTO) JM01.

2.0 SITE BACKGROUND

UST Site 21 is a former "berthing pier area" with fueling capabilities. UST Site 21 is located within the confines of NAS Pensacola and approximately ¼-mile south of Chevalier Field, as shown in Figure 1. The berthing pier area is situated along the Pensacola Bay shoreline and consists of an approximately 30-foot wide concrete loading area immediately adjacent to the pier seawall, surrounded by a large asphalt parking lot.

Previously, a 1,300,000-gallon fuel oil aboveground storage tank (AST) (No. 354) with a concrete containment wall was located adjacent to and west of the pier. The AST was removed on November 17, 1993. This AST was used to contain Navy Special Fuel Oil, Distillate Diesel Fuel Marine (DFM), and JP-5 Jet Fuel from 1926 until the mid 1980's [Naval Energy and Environmental Support Activity (NEESA), 1983]. Pipelines extended approximately 1,000 feet north from the fuel oil AST, presumably north toward the berthing pier (structure (Pier) No. 303) and possibly to other ship fueling areas. Therefore, the site extends approximately 1,000 feet north of the former AST location and interfaces with Building 707, 52, 18, and 2573.

In 1981, a leak was discovered in the fuel pipeline leading to the berthing pier. According to available information, the lines had broken during the years of usage or were penetrated while a contractor was driving piles. The soil in the area of the leak appeared soaked with fuel oil, reportedly Navy Special Fuel Oil or DFM. An unknown volume of soil was removed and properly disposed of in 1981 (NEESA, 1983).

UST Site 21 has been investigated through the Site Assessment and Remedial Action process and includes a series of sampling events conducted between 1996 and 2007. Tetra tech completed two groundwater sampling events at the site and reported concentrations of benzene, vinyl chloride, total xylenes, acenaphthene, dibenz(a,h)anthracene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, Total Recoverable Petroleum Hydrocarbons (TRPH), and lead at concentrations exceeding the Florida Groundwater Cleanup Target Levels (GCTLs).

The Remedial Action Plan (RAP) for IR Site 20 Berthing Pier (Pier 303), now identified as UST Site 21, stated that light non-aqueous phase liquid (LNAPL) in monitoring wells should be removed using

adsorbent socks. The adsorbent socks were to be used until LNAPL was no longer recovered. CH2M Hill Inc. implemented the RAP and began LNAPL recovery using the adsorbent socks and completed groundwater sampling events in 2007 and 2008. The adsorbent socks were reported to be ineffective since LNAPL recovery was reported at only 4 gallons in 2005 and 5 gallons in 2007. The LNAPL recovery was interrupted in late 2005 and 2006 due to Hurricane Ivan landfall. Results from groundwater sampling events at UST Site 21 indicate the presence of isopropylbenzene, vinyl chloride, acenaphthene, benzo(a)anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, 1-methyl naphthalene, 2-methyl naphthalene, naphthalene, TRPH and lead.

Based on current site conditions and the Florida Department of Environmental Protection (FDEP) promulgation of Risk Based Corrective Action (RBCA) Risk Management Options (RMOs), the Navy has decided to initiate additional site characterization to evaluate monitored natural attenuation (MNA) as an appropriate remediation strategy for UST Site 21.

3.0 INVESTIGATION ACTIVITIES

The UST Site 21 monitoring schedule requires quarterly groundwater sampling events during the first year to characterize current site conditions and provide data to develop and evaluate remedial alternatives. The quarterly groundwater sampling events for the 2010-2011 monitoring program were scheduled for November 2010, February 2011, May 2011 and August 2011. The first quarterly sampling event was completed on November 5 to 14, 2010 and the results are described in the Technical Memorandum dated February 8, 2011 (Tetra Tech, 2011). The second quarterly monitoring sampling event was conducted from February 7 to 11, 2011. The investigation activities for this second quarter included the collection of a synoptic round of water-level measurements and LNAPL measurements, collection of groundwater samples from 21 monitoring wells for Chemicals of Concern (COCs) laboratory analysis, and collection of groundwater samples from five selected monitoring wells to be analyzed for monitored natural attenuation (MNA) parameters. Figure 2 shows the locations of the monitoring wells that are included in the quarterly monitoring plan (Tetra Tech, 2010).

The monitoring wells to be sampled were selected during a data quality objectives meeting conducted in preparation of the UFP SAP. The monitoring wells selected for quarterly monitoring include:

MW-1	MW-4	MW-9
MW-13	MW-14	MW-16
MW-17	MW-23	MW-25*
MW-37	MW-38	MW-40
MW-41*	DMW-54	DMW-55*
DMW-60	DMW-61*	DMW-62
DMW-63	DMW-64	DMW-65*

*selected monitoring wells for MNA parameters

Site-specific health and safety training for all Tetra Tech field staff was provided as part of the site mobilization and daily health and safety briefings were given prior to starting each day.

Groundwater Sampling

Twenty-one monitoring wells were sampled as part of the groundwater monitoring event. Prior to sampling, each monitoring well was purged according to the procedures outlined in the UFP SAP (Tetra Tech, 2010). Purging was done using low-flow purging techniques (discharge rate of less than 1 liter per minute) with a peristaltic pump using Teflon™ tubing dedicated to each monitoring well. Field water quality measurements were taken during well purging with a multi-parameter flowcell according to the procedure outlined in the UFP SAP (Tetra Tech, 2010). Specifically, temperature, pH, specific conductivity, turbidity, dissolved oxygen (DO), and oxidation reduction potential (ORP) measurements were observed and recorded. The YSI® 556 multi-parameter water quality meter, which was used for measuring the field parameters, except turbidity, was calibrated prior to each day's sampling. The LaMotte® 2020e was calibrated daily and used to measure turbidity. Sample log sheets and calibration sheets are included in Appendix A.

The groundwater samples were collected using the procedures specified in Florida Statute (FS) 2200, Groundwater Sampling (FDEP, 2008). After collection, the groundwater samples were placed in a cooler, chilled with ice, and shipped under chain-of-custody protocol to Empirical Laboratories of Nashville, Tennessee. The samples were analyzed for selected volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (USEPA) Method 8260B, selected polycyclic aromatics hydrocarbons (PAHs) by USEPA Method 8270C, TRPH by the Florida- Residual Petroleum (FL-PRO) Method and lead by USEPA Method 6010B. Additionally for this second quarter, groundwater samples were analyzed for selected MNA parameters including alkalinity, anions (chloride, nitrate, nitrite and sulfate), dissolved gasses (hydrogen, methane, nitrogen and carbon dioxide), both total and dissolved iron and manganese, sulfide, biochemical oxygen demand (BOD) and chemical oxygen demand (COD). Groundwater samples to be analyzed for dissolved gasses (hydrogen, methane, nitrogen and carbon dioxide) were sent to Microseeps Lab of Pittsburgh, PA. The chains of custody records and field forms for this sampling event are included in Appendix A.

LNAPL Measurement

Field activities included measuring static water levels and LNAPL thickness in the monitoring wells on March 4, 2011. The groundwater elevation survey was completed to provide information regarding groundwater flow pattern and hydraulic gradients as well as current LNAPL thicknesses. One synoptic round of water-level and LNAPL measurements was conducted at all onsite monitoring wells as close to the low tide as possible.

Groundwater elevations were determined from depth to groundwater measurements made from a top of casing notch on the north side of the monitoring well casing for each monitoring well. The groundwater

elevations were determined using a known elevation for the top of each well casing that was determined relative to an arbitrary reference point elevation of 30 feet above mean sea level. The arbitrary reference point is at the northeast corner of an existing concrete light pole at UST Site 21. Water level and LNAPL thickness measurements were recorded to the nearest 0.01 foot using a water level measuring device that was capable of recording the LNAPL and water interface.

4.0 FIELD TASK MODIFICATIONS

The Field Task Modification Request, which was submitted for the first quarterly groundwater sampling event, also affected the second quarterly groundwater sampling event. Monitoring well MW-13 was included in the UFP SAP as one of the wells to be sampled. However, during the previous field event it was discovered that the cap for monitoring well MW-13 was missing and the monitoring well had been filled with “dirt”. Because monitoring well MW-13 could not be sampled monitoring well MW-10 located approximately 50 feet north of MW-13, was sampled in its place.

Additionally, a Field Task Modification Request was issued during this field event because of times at which low tide occurred. During the months of February and March 2011, low tide was predicted (http://tidesandcurrents.noaa.gov/get_predictions.shtml?year=2011&stn=2650+Pensacola) to occur predominantly during nighttime. However on March 4, 2011, two low tides were to occur at 6:37am and 5:07pm with a minimal range in tidal height. Therefore, groundwater levels were recorded centered around the slack tide period, at approximately noon.

5.0 GROUNDWATER MONITORING RESULTS

Groundwater Flow Direction and Elevation

Groundwater surface elevations for each well are listed in Table 1. The measured potentiometric surface at UST Site 21 appeared to be relatively flat with slight flow direction to the east and south toward the surrounding Pensacola Bay. Figure 3 presents the shallow groundwater elevation map with data from March 2011. Figure 4 lists the deep groundwater elevations.

The vertical groundwater gradient was estimated from the groundwater elevations measured in the shallow and deep monitoring well pairs installed at the site. The vertical gradient is determined from the difference in groundwater elevation of the adjacent deep minus the shallow monitoring wells and the vertical separation of the screened intervals of the monitoring wells (Table 2).

Table 2
March 2011 Groundwater Vertical Hydraulic Gradient
UST Site 21
Naval Air Station Pensacola
Pensacola Florida

	MW-2	DMW-54	MW-15	DMW64	MW-1	DMW-65
Relative Groundwater Elevation (ft)	19.43	19.37	19.38	22.05	19.36	16.39
Depth of Well (ft)	9	23	12	35	13	35
Vertical Distance (ft)	14		22		22	
Vertical Gradient (ft/ft)	0.0.600 downward		-0.1214 upward		0.1350 downward	

On March 4, 2011, vertical hydraulic gradients were calculated for three well pairs including MW-2 / DMW-54; MW-15 / DMW-64 and MW-1 / DMW-65. Two of the three measured vertical gradients: MW-2 / DMW-54 and MW-1 / DMW-65 were downward. During the 1st Quarter Groundwater Monitoring well pair MW-2 / DMW-54 had an upward vertical gradient and the calculated vertical gradient for well pair MW-15 / DMW-64 was downward.

LNAPL Measurement

LNAPL was identified in monitoring wells MW-2 (0.01 feet), MW -19 (0.05 feet), and MW-32 (0.01 feet), as listed in Table 1. Historically LNAPL had been reported covering a much larger area (1996 & 1997 – 12 wells; February 2005 - 18 wells; and July 2007 - 11 wells) and at much thicker levels (up to 1.42 feet).

Groundwater samples were not planned or collected in these monitoring wells (MW-2, MW-19 and MW-32), which previously contained LNAPL.

Groundwater Field Parameters Measurement

The field parameters measurements are summarized in Table 3. ORP, pH, dissolved oxygen (DO), and temperature measurements, which were collected to verify the well stabilization, were made in the field using a portable water-quality meter. During the February 2011 sampling event, ORP values across the site ranged from –398.30 millivolts (mV) to +173.10 mV. The pH values measured during the February 2010 sampling event ranged from 6.83 to 8.53. The DO concentrations ranged from 0.30 milligrams per liter (mg/L) to 8.10 mg/L in the shallow flow zone and 0.18 mg/L to 0.42 mg/L in the deeper flow zone. Groundwater temperatures during the sampling events ranged from 15.16 degrees Celsius (°C) to 23.66°C.

Groundwater Analytical Results

The results of the field parameter measurements are provided in Table 2 and the analytes with positive detections are listed in Table 4. Positive results reported below the quantitation limit but above the

method detection limit are identified with a "J". Appendix B contains the data validation report. The natural attenuation field parameters are presented in Table 3.

To determine if natural attenuation is occurring and to make scientifically valid decisions at the Site, concentrations of target analytes in the groundwater samples were compared to the following Florida Groundwater Cleanup Target Levels (GCTLs) per Chapter 62-777 Florida Administrative Case (F.A.C.), Florida Freshwater and Marine Surface Water Criteria per Chapter 62-777 F.A.C. and Florida Natural Attenuation Default Criteria (NADC) per Chapter 62-770 F.A.C. However, Florida Freshwater and Marine Surface Water Criteria are only applicable to those wells that are designated as a surface water point of compliance wells near Pensacola Bay, which for the quarterly monitoring sampling events are MW-25, MW-37, MW-38, DMW-61, DMW-60, DMW-62, DMW-63, DMW-64 and DMW-65. Acenaphthene was the only constituent detected above Florida Freshwater and Marine Surface Water Criteria in the applicable wells, MW 25 and MW-37, as detailed below. Figure 5 and Figure 6 show the monitoring well locations and analyte concentrations reported for the COCs (selected VOCs, PAHs, TRPH and lead) above their GCTLs and/or NADCs.

Volatile Organic Compounds (VOCs)

The groundwater samples were analyzed for the following selected VOC analytes: 1,1,1-trichloroethane, 1,2-dichloroethene, benzene, cis-1,2-dichloroethene, isopropylbenzene, methylene chloride, tetrachloroethylene, trichloroethylene, trans-1,2-dichloroethylene, total xylenes and vinyl chloride.

Isopropylbenzene was detected above its Florida GCTL (0.8 µg/L) in four groundwater samples collected from monitoring wells: MW-4 (9.23 µg/L), MW-17 (7.44 µg/L), MW-55 (9.27 µg/L) and DMW-60 (2.32 µg/L). The detected concentrations in monitoring wells MW-4 and MW-55 also exceeded the NADC of 8 µg/L.

Vinyl chloride was detected above its Florida GCTLs (1 µg/L) in two groundwater samples collected from monitoring wells: MW-14 (4.7 µg/L) and MW-54 (2.34 µg/L). Monitoring well, MW-14, had a groundwater sample with concentrations of vinyl chloride above the Freshwater and Marine Surface Water Criteria (2.4 µg/L). This well is located adjacent to Pensacola Bay however it is located at least 200 feet from the bay and the adjacent deep monitoring well DMW-64 was not reported to contain vinyl chloride above the instrument detection limit of 0.2 µg/L.

Other VOCs including benzene, cis-1,2-dichloroethene, trichloroethylene, total xylenes and trans-1,2-dichloroethylene were not detected at concentrations exceeding its Florida surface water or groundwater GCTLs .

Polycyclic Aromatic Hydrocarbon (PAHs)

The groundwater samples were analyzed for selected PAHs analytes including: 1-methylnaphthalene, 2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(k)flouranthene, chrysene, dibenzo(a,h)anthracene and naphthalene.

1-Methylnaphthalene was detected in groundwater samples collected from four monitoring wells, however only the groundwater sample from monitoring well DMW-55 (45 µg/L) had a concentration exceeding the Florida GCTL of 28 µg/L.

Acenaphthene was detected above the Freshwater and Marine Surface Water Criteria (3 µg/L) in groundwater samples from four monitoring wells including; MW-17 (30.4 µg/L), MW-25 (20.9 µg/L), MW-37 (40 µg/L), and DMW-55 (3.22 µg/L) of which only MW-25 and MW-37 are within 100 feet approximately from the bay. Three of those monitoring wells, MW-17, MW-25 and MW-37 had groundwater samples with acenaphthene concentrations exceeding its Florida GCTL of 20 µg/L. The groundwater sample from monitoring well MW-37, which is approximately 50 feet from Pensacola Bay, had the highest concentration (40 µg/L) of acenaphthene.

Benzo(a)anthracene was detected above its Florida GCTL (0.05 µg/L) in the groundwater sample collected from monitoring well, MW-4 (0.224 µg/L). Benzo(a)anthracene was not detected above its Florida GCTL during the first quarter sampling.

Ten of the monitoring wells sampled during this second quarterly sampling event had groundwater samples with no detected concentrations for PAHs.

Lead

Lead was detected in 6 of the groundwater samples collected from monitoring wells during the February 2011 sampling event. Lead was detected above its Florida GCTL only in the groundwater sample from monitoring well, MW-40 (24.7 µg/L; duplicate sample 24.7 µg/L). Lead was less than its Florida GCTL (15 µg/L) and Florida Freshwater and Marine Surface Water Criteria (8.5 µg/L), where applicable, in all the other monitoring wells sampled during the second quarter.

Total Recoverable Petroleum Hydrocarbons (TRPH)

TRPH was detected in groundwater samples collected from 12 monitoring wells during the February 2011 sampling event. TRPH was detected above its Florida GCTL in the groundwater sample from monitoring well MW-17 (21.9 mg/L). MW-17 is more than 300 feet from the Pensacola Bay.

MNA Analytical Results

During this second quarterly monitoring event groundwater samples from five monitoring wells (MW-25, MW-41, DMW-55, MW-61 and MW-65) were collected and analyzed for MNA parameters, which include alkalinity, anions (chloride, nitrate, nitrite and sulfate), dissolved gasses (hydrogen, methane, nitrogen and carbon dioxide), both total and dissolved iron and manganese, sulfide, biochemical oxygen demand (BOD) and chemical oxygen demand (COD). The results are included in Table 4.

Indicators of natural attenuation and the likely aerobic biodegradation of contaminants are directly related to changes in groundwater chemistry. Indicators include the biological consumption of oxygen, nitrate, and sulfate as well as the generation of byproducts such as dissolved iron, manganese, and methane; moreover, increases in total alkalinity and carbon dioxide are found. These geochemical indicators can be used to estimate the site-specific potential for the biodegradation of contaminants within the aquifer.

Carbon dioxide levels are monitored as an indicator of microbial activity. Carbon dioxide is the carbon product of biodegradation for respiration processes other than methanogenesis. Carbon dioxide concentrations ranged from 9.1 mg/L in MW-41 to 68 in DMW-65 mg/L.

Alkalinity is the amount of dissolved minerals in the groundwater. The greatest contributing factor to alkalinity levels is the reaction between carbon dioxide in the groundwater and minerals in the surrounding soil. The resulting alkalinity concentrations ranged from 101 mg/L in MW-41 to 847 mg/L in DMW-65.

Nitrite concentrations were detected below laboratory limits in the five groundwater samples analyzed, and nitrate concentrations were detected below laboratory limits in four of the five groundwater samples analyzed. The groundwater sample collected from MW-41 had a concentration of nitrate of 0.231 mg/L. Sulfate can be used as an electron acceptor after DO, nitrate, and ferric iron are consumed. Under these conditions sulfate is reduced to sulfide or sulfide compounds (such as H₂S or HS⁻). The presence of higher levels of sulfate may be indicative of oxidizing conditions, the oxidation of reduced sulfides to sulfates is occurring, and conditions for aerobic biodegradation are favorable. The lowest concentration of sulfate was 0.655 mg/L (estimated) and was detected in DMW-55. The highest concentration of sulfate was 1,210 mg/L and was detected in DMW-61.

Five groundwater samples were analyzed in the laboratory for sulfide. Results from the laboratory indicate sulfide concentrations below method detection limits at one well, MW-41. The concentrations of sulfide detected at the other four wells ranged from 1.2 mg/L (estimated) in DMW-55 to 122 mg/L in DMW-61.

Monitoring of dissolved gases (methane, carbon dioxide and hydrogen) was conducted as part of the second quarter groundwater monitoring event. The analytical results for groundwater sampled are listed in Table 4. As indicated above, carbon dioxide is a byproduct of both aerobic and anaerobic degradation. Elevated levels of carbon dioxide indicate microbial activity has been stimulated. Elevated levels of methane (e.g., generally greater than 1.0 mg/L) indicate fermentation is occurring in a highly anaerobic environment. Hydrogen is the primary electron donor used in anaerobic dechlorination. Higher levels of hydrogen generally between two and eleven nanomoles (nM) are optimal for efficient reductive dechlorination. Carbon dioxide concentrations ranged from methane concentrations in the five wells sampled ranged from 5.7 ug/L in MW-41 to 1200 ug/L in DMW-55. Hydrogen concentrations ranged from 0.55 nM (estimated) in MW-41 to 18 nM in DMW-65.

6.0 RECOMMENDATIONS AND CONCLUSIONS

Based on the decision rules in the UFP SAP (Tetra Tech, 2010) four quarters of groundwater monitoring events will be conducted before recommendations and conclusions are made. A comprehensive evaluation of all data and the efficacy of MNA will be performed following the fourth monitoring event and presented in the Annual Monitoring Report.

Notes:

⁽¹⁾ Elevations based upon arbitrary elevation of 30 feet above MSL assigned to the northeast corner of an existing concrete light pole.

⁽²⁾ The corrected depth to groundwater = Depth to water - (free product thickness * specific gravity of 0.9 for Bunker "C" oil)

ft = feet

MSL = Mean Sea Level

BTOC = Below Top of Casing

NA = Not Applicable

NP = Not Present

APPENDIX B

To: G Walker
SDG: P1102086
Date: 3/29/2011

EXECUTIVE SUMMARY

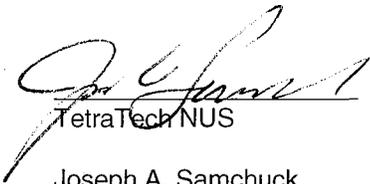

Laboratory Performance Issues: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for organic Data Validation (10/1999) and the Department of Defense (DoD) Quality Systems Manual (QSM) (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE
 Client: TetraTech NUS, Inc.
 Project Number: NAS Pensacola
 SDG: UST21-MW25-0211
 Microseeps Project No.: P1102086

Sample Receipt

Microseeps, Inc. received the sample shipment on 2/10/2011. The samples were received in good condition, properly preserved and within the correct temperature range. A summary of the field identifications and Microseeps identifications is presented below

Field Identifications	Lab Identifications
UST21-MW41-0211	P1102086-01
UST21-MW65-0211	P1102086-02
UST21-MW25-0211	P1102086-03
UST21-MW61-0211	P1102086-04
UST21-MW55-0211	P1102086-05

A copy of all communications concerning this project has been enclosed.

Sample Analyses

The sample analyses were performed in accordance with Microseeps routine Standard Operating procedures. There were no unusual observances noted during the analysis of this sample.

EXECUTIVE SUMMARY

Laboratory Performance Issues: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Inorganic Data Validation (10/2004) and the Department of Defense (DoD) Quality Systems Manual (QSM) (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

This is an original submittal of the final report package.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

Wet Chemistry:

1102074-01 and -02 are qualified with an M for Chloride to indicate that the RL was raised due to interference.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

**EMPIRICAL LABORATORIES
COOLER RECEIPT FORM**

LIMS Number: 1102074 Number of Coolers: 1 of 1
 Client: Tetra Tech Mex Inc Project: UST 21
 Date/Time Received: 2-9-11 8:30 Date cooler(s) opened: 2-9-11
 Opened By (print): Chris Donald (signature): [Signature]

Circle response below as appropriate

1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 5070

2. Were custody seals on outside of cooler(s)? Yes No
 How many: 2 Seal date: 2-8-11 Seal Initials: [Initials]

- 3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
- 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
- 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
- 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
- 7. Was project identifiable from custody papers? Yes No N/A
- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE

Temperature of Samples upon Receipt: Initial Value: 2.3 °C Correction Factor: -0.3 °C Final Value: 2.0 °C

Dates samples were logged-in: 2-9-11

9. Initial this form to acknowledge login of sample(s): (Name): [Signature] (Initial): [Initials]

- 10. Were all bottle lids intact and sealed tightly? Yes No N/A
- 11. Did all bottles arrive unbroken? Yes No N/A
- 12. Was all required bottle label information complete? Yes No N/A
- 13. Did all bottle labels agree with custody papers? Yes No N/A
- 14. Were correct containers used for the analyses indicated? Yes No N/A
- 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
- 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
- 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
- 18. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

OVERVIEW

The sample set for CTO JM01 NAS PENSACOLA, SDG CTOJM01_006 consists of five (5) aqueous environmental samples and a trip blank analyzed for select Volatile Organic Compounds (VOCs). The select VOCs were benzene, 1,2-dichloroethane, cis- 1,2-dichloroethene, trans- 1,2-dichloroethene, isopropylbenzene, methylene chloride, tetrachloroethene, 1,1,1-trichloroethane, trichloroethene, vinyl chloride and total xylenes. The five (5) aqueous environmental samples were also analyzed for select Polycyclic Aromatic Hydrocarbons (PAH) and petroleum range organics (PET). The select PAHs were acenaphthene, benzo(a)anthracene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, 1-methylnaphthalene, 2-methylnaphthalene and naphthalene.

The samples were collected by Tetra Tech on February 8 and 9, 2011 and analyzed by Empirical Laboratories, LLC. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C and FL-PRO analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data Completeness
- * • Holding Times
- * • GC/MS Tuning
- Initial and Continuing Calibration
- * • Laboratory Method Blank
- Surrogate Recoveries
- * • Blank Spike/Blank Spike Duplicate Results
- * • Matrix Spike/Matrix Spike Duplicate Results
- * • Internal Standard Recoveries
- * • Compound Identification
- * • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

SDG; CTOJM01_006
DATE: March 30, 2011
PAGE 2

VOC

The continuing calibration percent difference (%D) for 1,2-dichloroethane was greater than the 20% quality control limit on February 15, 2011 @ 9:18 on instrument MS-VOA4. The nondetected 1, 2-dichloroethane results were qualified as estimated (UJ) in all samples.

PAH

The continuing calibration %Ds for benzo(a)anthracene and chrysene were greater than the 20% quality control limit on February 21, 2011 @ 16:47 on instrument MS-BNA4. The nondetected benzo(a)anthracene and chrysene results were qualified as estimated (UJ) in all samples.

PET

The percent recovery (%R) of surrogate o-terphenyl was less than the lower quality control limit in the PET fraction for sample UST21-MW61-0211 (74.7% versus a lower limit of 82%). The nondetected TPH result in sample UST21-MW61-0211 was qualified as estimated (UJ).

ADDITIONAL COMMENTS

All samples had laboratory reported Method Detection Limits (MDL) for the dibenzo(a,h)anthracene greater than the Project Action Limit (PAL) of 0.005 ug/L listed in the Sampling and Analysis Plan (SAP). The SAP had noted that the laboratory MDL was greater than the PAL and no action was taken for this issue.

Nondetected results were reported to the method detection limit (MDL).

The laboratory reported 1,2-dichloroethane even though this compound was not requested on the chain of custody and in the project SAP. All results were nondetected. No action was taken.

Total 1,2-dichloroethene was identified in the SAP and on the chain of custody. Because both cis and trans-1,2-dichloroethene were reported, a total 1,2-dichloroethene result can be calculated, if necessary. No action was required.

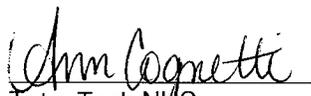

EXECUTIVE SUMMARY

Laboratory Performance Issues: The continuing calibration %Ds for 1,2-dichloroethane, benzo(a)anthracene and chrysene exceeded quality control limits. TPH surrogate recovery was low in sample UST21-MW61-0211.

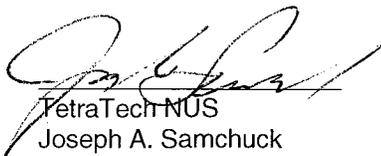

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
- Q = Other problems (can be any number of issues; e.g. poor chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $> 25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX B

RESULTS AS REPORTED BY THE LABORATORY

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

This is an original submittal of the final report package.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B04705-CCV1 exceeded criteria with a positive bias for 1,2-Dichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The continuing calibration verification 1B05309-CCV1 exceeded criteria with a positive bias for Benzo(a)anthracene and Chrysene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in sample 1102098-07.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

No anomalies or deviations are noted.

Wet Chemistry:

Samples 1102098-05, -07, and -09 are qualified with an M for Chloride to indicate that the RL was raised due to interference.

The continuing calibration blank 1B04809-CCB2 has a positive result for Chloride.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

- * • Field Duplicate Precision
- * • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

VOC

The continuing calibration percent difference (%D) for 1,1,1-trichloroethane was greater than the 20% quality control limit on February 16, 2011 @ 9:04 on instrument MS-VOA3. The nondetected 1,1,1-trichloroethane results in the affected samples UST21-MW63-0211, UST21-MW64-0211, UST21-MW60-0211, UST21-MW54-0211, UST21-MW01-0211 and UST21-MW10-0211 were qualified as estimated (UJ).

PAH

The continuing calibration %D for benzo(f)fluoranthene was greater than the 20% quality control limit on February 22, 2011 @ 3:55 on instrument MS-BNA4. The nondetected benzo(k)fluoranthene results in the affected samples UST21-MW63-0211, UST21-MW64-0211, UST21-MW60-0211, UST21-MW54-0211, UST21-MW01-0211 and UST21-MW62-0211 were qualified as estimated (UJ).

The continuing calibration %D for dibenzo(a,h)anthracene was greater than the 20% quality control limit on February 22, 2011 @ 18:04. The nondetected dibenzo(a,h)anthracene results in the affected samples UST21-MW10-0211, UST21-GW23-0211, GW02-020911, UST21-MW16-0211, UST21-MW14-0211 and UST21-MW37-0211 were qualified as estimated (UJ).

PET

The percent recovery (%R) of surrogate o-terphenyl was less than the lower quality control limit but greater than 10% in samples UST21-MW63-0211 (79.9% versus a lower limit of 82%) and UST21-MW14-0211 (75% versus a lower limit of 82). The positive and nondetected TPH results in samples UST21-MW63-0211 and UST21-MW14-0211 were qualified as estimated (J) and (UJ), respectively.

ADDITIONAL COMMENTS

The %R of base/neutral surrogate 2-fluorobiphenyl was less than the lower quality control limit in sample UST21-MW64-0211 (26.8% versus a lower limit of 34%). No action was taken on this noncompliance.

All samples had laboratory reported Method Detection Limits (MDL) for the dibenzo(a,h)anthracene greater than the Project Action Limit (PAL) of 0.005 ug/L listed in the Sampling and Analysis Plan (SAP). The SAP had noted that the laboratory MDL was greater than the PAL and no action was taken for this issue.

Sample UST21-MW37-0211 was diluted 10X in order to obtain a concentration of acenaphthene within instrument calibration range.

The laboratory reported 1,2-dichloroethane even though this compound was not requested on the chain of custody and in the project SAP. All results were nondetected. No action was taken.

TO: G. Walker
FROM: A. Cognetti
SDG; CTOJM01_007
DATE: March 30, 2011
PAGE 3

Total 1,2-dichloroethene was identified in the SAP and on the chain of custody. Because both cis and trans-1,2-dichloroethene were reported, a total 1,2-dichloroethene result can be calculated, if necessary. No action was required.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The continuing calibration %Ds for 1,1,1-trichloroethane, benzo(k)fluoranthene and dibenzo(a,h)anthracene exceeded quality control limits. The TPH surrogate recovery was low in samples UST21-MW63-0211 and UST21-MW14-0211.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

Data package revised to include U qualifiers for 1B16004-BLK1 and 1B16009-BLK1 for SW8260B.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B04812-CCV1 exceeded criteria with a positive bias for 1,1,1-Trichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The continuing calibration verifications exceeded criteria in 1B05408-CCV1 with a

positive bias for Benzo(k)fluoranthene and in 1B05515-CV1 with a negative bias for Dibenz(a,h)anthracene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

No anomalies or deviations are noted.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in samples 1102113-01 and -11.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

LIMS Number: NO2113 Number of Coolers: 1 of 6
 Client: Tetra Tech NUS, Inc Project: US/21 Pennsylvania
 Date/Time Received: 2-11-11/08:45 Date cooler(s) opened: 2-11-11
 Opened By (print): _____ (signature): _____

Circle response below as appropriate
 1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 0230

2. Were custody seals on outside of cooler(s)? Yes No
 How many: 2 Seal date: 2-10-11 Seal Initials: ?
3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
 7. Was project identifiable from custody papers? Yes No N/A
 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE
 Temperature of Samples upon Receipt: Initial Value: 2.3 °C Correction Factor: -0.3 °C Final Value: 2.0 °C

Dates samples were logged-in: 2-13-11
 9. Initial this form to acknowledge login of sample(s): (Name): Chris Donald (Initial): CD

10. Were all bottle lids intact and sealed tightly? Yes No N/A
 11. Did all bottles arrive unbroken? Yes No N/A
 12. Was all required bottle label information complete? Yes No N/A
 13. Did all bottle labels agree with custody papers? Yes No N/A
 14. Were correct containers used for the analyses indicated? Yes No N/A
 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
 18. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

OVERVIEW

The sample set for CTO JM01 NAS Pensacola, SDG CTOJM01_007 consists of twelve (12) aqueous samples. This SDG contained one field duplicate pair: GW02-020911/UST21-MW62-0211.

All samples were analyzed for lead, iron, and manganese. The samples were collected by TetraTech NUS from February 9th and 10th, 2011 and analyzed by Empirical Laboratories, LLC. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using EPA SW846 method 6010B analytical and reporting protocol. The data contained in this SDG were validated with regard to the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Initial and Continuing Calibrations
- * • Laboratory Method Blank Analyses
- * • Interferent Standard Results
- * • Laboratory Control Sample Results
- * • Matrix Spike/ Matrix Spike Duplicate Results
- * • Field Duplicate Precision
- * • Serial Dilution Results
- * • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B. The text of this report is formatted to address only gross non-compliances resulting in the rejection of data and elimination of false positives.

Metals:

All sample results were within quality control limits.

Additional Comments:

Positive results between less than the reporting limit but greater than the method detection were qualified as estimated (J).

To: G Walker
SDG: CTOJM01_007
Date: 3/30/2011

Samples UST21-MW63-0211 and UST21-MW64-0211 were analyzed at a 2X dilution for lead. The non-detected sample result was reported at an elevated MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Inorganic Data Validation (10/2004) and the Department of Defense (DoD) Quality Systems Manual (QSM) (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

Data package revised to include U qualifiers for 1B16004-BLK1 and 1B16009-BLK1 for SW8260B.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B04812-CCV1 exceeded criteria with a positive bias for 1,1,1-Trichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The continuing calibration verifications exceeded criteria in 1B05408-CCV1 with a

positive bias for Benzo(k)fluoranthene and in 1B05515-CV1 with a negative bias for Dibenz(a,h)anthracene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

No anomalies or deviations are noted.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in samples 1102113-01 and -11.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

**EMPIRICAL LABORATORIES
COOLER RECEIPT FORM**

LIMS Number: NO2113 Number of Coolers: 1 of 6

Client: Tetra Tech NYS, Inc Project: US121 Pennsylvania

Date/Time Received: 2-11-11/08:45 Date cooler(s) opened: 2-11-11

Opened By (print): Chris Donald (signature): _____

Circle response below as appropriate

1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 0230

2. Were custody seals on outside of cooler(s)? Yes No
 How many: 2 Seal date: 2-10-11 Seal Initials: ?

- 3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
- 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
- 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
- 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
- 7. Was project identifiable from custody papers? Yes No N/A
- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE

Temperature of Samples upon Receipt: Initial Value: 2.3 °C Correction Factor: -0.3 °C Final Value: 2.0 °C

Dates samples were logged-in: 2-13-11

9. Initial this form to acknowledge login of sample(s): (Name): Chris Donald (Initial): CD

- 10. Were all bottle lids intact and sealed tightly? Yes No N/A
- 11. Did all bottles arrive unbroken? Yes No N/A
- 12. Was all required bottle label information complete? Yes No N/A
- 13. Did all bottle labels agree with custody papers? Yes No N/A
- 14. Were correct containers used for the analyses indicated? Yes No N/A
- 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
- 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
- 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
- 18. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

Household TMS
pH < 2 for all FLPRO & metals samples

UST-21-RB-0211		

OVERVIEW

The sample set for CTO JM01 NAS PENSACOLA, SDG CTOJM01_008 consists of six (6) aqueous environmental samples, a rinsate blank and a trip blank analyzed for select Volatile Organic Compounds (VOCs). The select VOCs were benzene, 1,2-dichloroethane, cis- 1,2-dichloroethene, trans- 1,2-dichloroethene, isopropylbenzene, methylene chloride, tetrachloroethene, 1,1,1-trichloroethane, trichloroethene, vinyl chloride and total xylenes. The six (6) aqueous environmental samples and rinsate blank were also analyzed for select Polycyclic Aromatic Hydrocarbons (PAH) and petroleum range organics (PET). The select PAHs were acenaphthene, benzo(a)anthracene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, 1-methylnaphthalene, 2-methylnaphthalene and naphthalene. There is one (1) field duplicate pair contained within this SDG: GW01-021111/UST-21-MW-40-0211.

The samples were collected by Tetra Tech on February 10 and 11, 2011 and analyzed by Empirical Laboratories, LLC. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C and FL-PRO analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data Completeness
- * • Holding Times
- * • GC/MS Tuning
- Initial and Continuing Calibration
- * • Laboratory Method Blank
- Surrogate Recoveries
- * • Blank Spike/Blank Spike Duplicate Results
- * • Matrix Spike/Matrix Spike Duplicate Results
- * • Internal Standard Recoveries
- * • Compound Identification
- * • Field Duplicate Precision
- * • Detection Limits

PAGE 2

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

VOC

The continuing calibration percent difference (%D) for 1,1,1-trichloroethane was greater than the 20% quality control limit on February 17, 2011 @ 21:07 on instrument MS-VOA3. The nondetected 1,1,1-trichloroethane results were qualified as estimated (UJ) in all samples.

PET

The percent recovery (%R) of surrogate o-terphenyl was less than the lower quality control limit but greater than 10% in samples UST-21-MW-38-0211 (80.6% versus a lower limit of 82%), UST-21-MW-40-0211 (68.8% versus a lower limit of 82%) and GW01-021111 (67.3% versus a lower limit of 82%). The nondetected TPH results in samples UST-21-MW-38-0211, UST-21-MW-40-0211 and GW01-021111 were qualified as estimated (UJ).

ADDITIONAL COMMENTS

The rinsate blank, UST-21-RB-0211, contained methylene chloride.

<u>Contaminant</u>	<u>Maximum Concentration (ug/L)</u>
Methylene Chloride	19.5

No action was taken on the positive methylene chloride results in the sample because of rinsate blank contamination.

The laboratory control sample (LCS) associated with batch 1B15023 had a relative percent difference (RPD) for naphthalene greater than the quality control limit (30.6% versus quality control of 30%). The percent recovery of naphthalene in the LCS and LCS duplicate were within quality control limits. No action was required on the nondetected naphthalene results.

Sample UST-21-17-0211 was diluted 2X in the PET fraction.

All samples had laboratory reported Method Detection Limits (MDL) for the dibenzo(a,h)anthracene greater than the Project Action Limit (PAL) of 0.005 ug/L listed in the Sampling and Analysis Plan (SAP). The SAP had noted that the laboratory MDL was greater than the PAL and no action was taken for this issue.

The laboratory reported 1,2-dichloroethane even though this compound was not requested on the chain of custody and in the project SAP. All results were nondetected. No action was taken.

Total 1,2-dichloroethene was identified in the SAP and on the chain of custody. Because both cis and trans-1,2-dichloroethene were reported, a total 1,2-dichloroethene result can be calculated, if necessary. No action was required.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

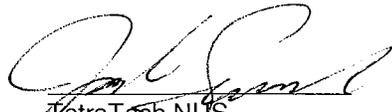

Laboratory Performance Issues: The continuing calibration %Ds for 1,1,1-trichloroethane, exceeded quality control limits. The TPH surrogate recovery was low in several samples.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009). The text of this report has been formulated to address only those problem areas affecting data quality.

- Appendix B – Results as Reported by the Laboratory
- Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX B

RESULTS AS REPORTED BY THE LABORATORY

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

This is an original submittal of the final report package.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B05006-CCV1 exceeded criteria with a positive bias for 1,1,1-Trichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The batch spikes associated to batch 1B15023 exceeded relative percent difference criteria for Naphthalene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in sample 1102133-02, -04, and -08. Note – recoveries were within in-house recovery limits of 30%-140%.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

The sample 1102133-07 is qualified with an M for Lead to indicate that the MDL was raised due to interference.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

COOLER RECEIPT FORM

LIMS Number: 1021383 Number of Coolers: 1 of 4

Client: Tetra Tech NUS, Inc Project: U521

Date/Time Received: 2-12-11/09:00 Date cooler(s) opened: 2-22-11/22/11

Opened By (print): Chris Daniels (signature): [Signature]

Circle response below as appropriate

1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 9834

2. Were custody seals on outside of cooler(s)? Yes No
How many: 2 Seal date: 2-11-11 Seal Initials: ?

- 3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
- 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
- 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
- 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
- 7. Was project identifiable from custody papers? Yes No N/A
- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE
Temperature of Samples upon Receipt: Initial Value: 3.4 °C Correction Factor: -0.3 °C Final Value: 3.1 °C

Dates samples were logged-in: 2-14-11
9. Initial this form to acknowledge login of sample(s): (Name): [Signature] (Initial): CD

- 10. Were all bottle lids intact and sealed tightly? Yes No N/A
- 11. Did all bottles arrive unbroken? Yes No N/A
- 12. Was all required bottle label information complete? Yes No N/A
- 13. Did all bottle labels agree with custody papers? Yes No N/A
- 14. Were correct containers used for the analyses indicated? Yes No N/A
- 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
- 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
- 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
- 18. Was headspace present in any included VOA vials? Yes No N/A

EXECUTIVE SUMMARY

Laboratory Performance Issues: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Inorganic Data Validation (10/2004) and the Department of Defense (DoD) Quality Systems Manual (QSM) (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
Other problems (can be any number of issues; e.g. poor chromatography, interferences, etc.)
- Q = etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
% Difference between columns/detectors $> 25\%$ for positive results determined via
- U = GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

This is an original submittal of the final report package.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B05006-CCV1 exceeded criteria with a positive bias for 1,1,1-Trichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The batch spikes associated to batch 1B15023 exceeded relative percent difference criteria for Naphthalene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in sample 1102133-02, -04, and -08. Note – recoveries were within in-house recovery limits of 30%-140%.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

The sample 1102133-07 is qualified with an M for Lead to indicate that the MDL was raised due to interference.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

COOLER RECEIPT FORM

LIMS Number: 110213 #3 Number of Coolers: 1 of 4
 Client: Tetra Tech NUS, Inc Project: UST 21
 Date/Time Received: 2-12-11/09:00 Date cooler(s) opened: 2-12-11
 Opened By (print): Chris Daniels (signature): [Signature]

Circle response below as appropriate
 1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter air bill number here: 9834

2. Were custody seals on outside of cooler(s)? Yes No
 How many: 2 Seal date: 2-11-11 Seal Initials: ?

- 3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
- 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
- 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
- 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
- 7. Was project identifiable from custody papers? Yes No N/A
- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE
 Temperature of Samples upon Receipt: Initial Value: 3.4 °C Correction Factor: -0.3 °C Final Value: 3.1 °C

Dates samples were logged-in: 2-14-11
 9. Initial this form to acknowledge login of sample(s): (Name): [Signature] (Initial): [Initials]

- 10. Were all bottle lids intact and sealed tightly? Yes No N/A
- 11. Did all bottles arrive unbroken? Yes No N/A
- 12. Was all required bottle label information complete? Yes No N/A
- 13. Did all bottle labels agree with custody papers? Yes No N/A
- 14. Were correct containers used for the analyses indicated? Yes No N/A
- 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
- 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
- 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
- 18. Was headspace present in any included VOA vials? Yes No N/A

To: G Walker
SDG: CTOJM01_006
Date: 3/30/2011

Additional Comments:

The following contaminant was detected in a calibration blank at the following maximum concentration:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
Chloride	0.207 mg/L	1.03 mg/L

An action level of 5X the maximum concentration has been used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was taken as all samples results were greater than the blank action level.

Positive results between less than the reporting limit but greater than the method detection were qualified as estimated (J). Estimated (J) qualification codes were listed on the Form 1s but were not included in the EDD for the miscellaneous parameters. The data validator added them to the data base.

Samples UST21-MW61-0211 and UST21-MW65-0211 were analyzed at a 2X dilution for lead. The non-detected sample results were reported at an elevated MDL.

Sample UST21-MW61-0211 was analyzed at dilutions for the following analytes: COD (10X), chloride (100X), Nitrate-N (20X), and sulfate (20X).

EXECUTIVE SUMMARY

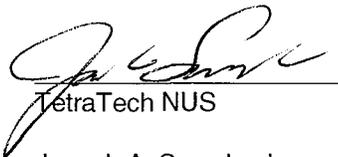

Laboratory Performance Issues: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Inorganic Data Validation (10/2004) and the Department of Defense (DoD) Quality Systems Manual (QSM) (April, 2009). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS - GFAA MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $< CRQL$ for organics)
Other problems (can be any number of issues; e.g. poor chromatography, interferences, etc.)
- Q = etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
% Difference between columns/detectors $> 25\%$ for positive results determined via
- U = GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

Sample Delivery Group Case Narrative

Receipt Information

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision

This is an original submittal of the final report package.

Analytical Information

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. The following information is provided specific to individual methods:

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

- A:** The peak was manually integrated as it was not integrated in the original chromatogram.
- B:** The peak was manually integrated due to resolution or coelution issues in the original chromatogram.
- C:** The peak was manually integrated to correct the baseline from the original chromatogram.
- D:** The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.
- E:** The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

SW8260B:

The continuing calibration verification 1B04705-CCV1 exceeded criteria with a positive bias for 1,2-Dichloroethane.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW8270C:

The continuing calibration verification 1B05309-CCV1 exceeded criteria with a positive bias for Benzo(a)anthracene and Chrysene.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

FLPRO:

The surrogate o-Terphenyl exceeded criteria with a negative bias in sample 1102098-07.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

SW6010C:

No anomalies or deviations are noted.

Wet Chemistry:

Samples 1102098-05, -07, and -09 are qualified with an M for Chloride to indicate that the RL was raised due to interference.

The continuing calibration blank 1B04809-CCB2 has a positive result for Chloride.

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

COOLER RECEIPT FORM**

LIMS Number: 110205 Number of Coolers: 1 of 3

Client: Tetra Tech NUS INC Project: 112G02200

Date/Time Received: 2.10.11 11:45 Date cooler(s) opened: 2.10.11

Opened By (print): Russ Townsend (signature): [Signature]

Circle response below as appropriate

1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 5081

2. Were custody seals on outside of cooler(s)? Yes No

How many: 2 Seal date: 2-9-11 Seal Initials: ?

3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A

4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A

5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A

6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A

7. Was project identifiable from custody papers? Yes No N/A

8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE

Temperature of Samples upon Receipt: Initial Value: 0.7 °C Correction Factor: -0.3 °C Final Value: 0.4 °C

Dates samples were logged-in: 2-11-11

9. Initial this form to acknowledge login of sample(s): (Name): [Signature] (Initial): [Signature]

10. Were all bottle lids intact and sealed tightly? Yes No N/A

11. Did all bottles arrive unbroken? Yes No N/A

12. Was all required bottle label information complete? Yes No N/A

13. Did all bottle labels agree with custody papers? Yes No N/A

14. Were correct containers used for the analyses indicated? Yes No N/A

15. Were preservative levels correct in all applicable sample containers? Yes No N/A

16. Was residual chlorine present in any applicable sample containers? Yes No N/A

17. Was sufficient amount of sample sent for the analyses required? Yes No N/A

18. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

ph C 2 for all metals, copper & Zn Pb S
ph 5 for all sulfides

- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE

Temperature of Samples upon Receipt: Initial Value: 3.3 °C Correction Factor: -0.3 °C Final Value: 3.0 °C

Dates samples were logged-in: 5/11/11 10/11/11
9. Initial this form to acknowledge login of sample(s): (Name): _____ (Initial): _____

- 10. Were all bottle lids intact and sealed tightly? Yes No N/A
- 11. Did all bottles arrive unbroken? Yes No N/A
- 12. Was all required bottle label information complete? Yes No N/A
- 13. Did all bottle labels agree with custody papers? Yes No N/A
- 14. Were correct containers used for the analyses indicated? Yes No N/A
- 15. Were preservative levels correct in all applicable sample containers? Yes No N/A
- 16. Was residual chlorine present in any applicable sample containers? Yes No N/A
- 17. Was sufficient amount of sample sent for the analyses required? Yes No N/A
- 18. Was headspace present in any included VOA vials? Yes No N/A

If Non-Conformance issues were present, list by sample ID: _____

EMPIRICAL LABORATORIES
COOLER RECEIPT FORM

LIMS Number: 1102098 Number of Coolers: 3 of 3

Client: Tetra Tech NVS INC. Project: 112 G02200

Date/Time Received: 2.10.11 11:45 Date cooler(s) opened: 2.10.11

Opened By (print): Russ Townsend (signature): Russ Townsend

Circle response below as appropriate

1. How did the samples arrive? FedEx UPS DHL Hand Delivered
 EL Courier Other: _____

If applicable, enter airbill number here: 6111

2. Were custody seals on outside of cooler(s)? Yes No
How many: 2 Seal date: 2-9-11 Seal Initials: ?

- 3. Were custody seals unbroken and intact at the date and time of arrival? Yes No N/A
- 4. Were custody papers sealed in a plastic bag included in the sample cooler? Yes No N/A
- 5. Were custody papers filled out properly (ink, signed, etc.)? Yes No N/A
- 6. Did you sign custody papers in the appropriate place for acceptance? Yes No N/A
- 7. Was project identifiable from custody papers? Yes No N/A
- 8. If required, was enough ice present in the cooler(s)? Yes No N/A

Type of Coolant: WET DRY BLUE NONE

Temperature of Samples upon Receipt: Initial Value: 23 °C Correction Factor: -0.3 °C Final Value: 2.0 °C

Dates samples were logged-in: See 1 of 3
9. Initial this form to acknowledge login of sample(s): (Name): _____ (Initial): _____
