RE: Draft Final Tier I Sampling and Analysis Plan, Extended Site Inspection Plan for
NAS Pensacola - Magazine Point Bombing Target, Naval Air Station Pensacola,
Pensacola, Florida

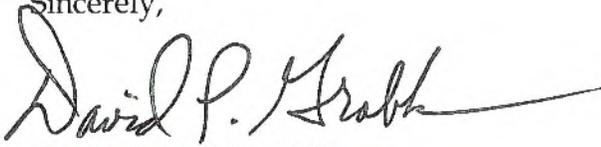

Dear Mr. Schoolfield:

I have reviewed the Draft Final Tier I Sampling and Analysis Plan (SAP), Extended Site Inspection Plan for NAS Pensacola - Magazine Point Bombing Target, Naval Air Station Pensacola, dated March 2012 (received April 3, 2012), prepared and submitted by Tetra Tech NUS, Inc. This SAP takes the place of the Draft Final Tier II SAP issued in November 2011 and for which the Department had no comments. The SAP proposes to conduct further site assessment using an Incremental Sampling Methodology (ISM) approach described in Standard Operating Procedure (SOP) - 05, located in Appendix A of the SAP. Please note that the Department has not formally accepted this assessment methodology and is currently attempting to draft guidance for conducting site assessment using ISM. My general response to the SAP is that it appears to be a reasonable effort to determine whether the top six inches of soil have been adversely impacted by metals or explosives. I believe upon the Navy's resolving EPA's additional comments on this Tier I SAP, the Department will accept the SAP as final.

Mr. John Schoolfield
Draft Final Tier I SAP for Magazine Point Bombing Target
