Re: EPA Review of the OU 13, Site 8 and 24 Interim Remedial Action Completion Report

Dear Mr. Darby:

The United States Environmental Protection Agency has received and reviewed the document referenced above. The report documents the implementation of land use controls (LUC) to restrict groundwater use and the installation of the monitoring well network as established in the Record of Decision dated October 5, 2006. The monitoring well network will be used to document the progression of the natural attenuation currently ongoing in the groundwater. Once criteria have been met in groundwater a final closeout report can be written. LUCs will be in place until the parties agree that unlimited exposure and unlimited use of the site is possible without adverse health concerns.

Thank you for the opportunity to review the report. Should you have any issues with this letter, please contact me or Tim Woolheater at 404-562-8510 or woolheater.tim@epa.gov.

Sincerely,

A handwritten signature in cursive script that reads "Arthur L. Collins".

Arthur L. Collins, Chief
Federal Facilities Branch
Superfund Division

CC: Mr. David Grabka, FDEP
