Subject: Site Investigation, Sites 103, 104 and 105, Bronson Field, Pensacola, Florida

Dear Ms. Marajh-Whittemore:

Tetra Tech NUS, Inc. is mobilizing in February and March 2012 to conduct field activities for a Site Assessment at Outlying Landing Field (OLF) Bronson, hereinafter referred to as Bronson Field, located in Pensacola, Florida. The Site Investigation activities were planned in a Final Sampling and Analysis Plan (Field Sampling Plan and Quality Assurance Project Plan), Site Investigation, Site 103 - Bronson Field Flight Line, Site 104 - Bronson Field Hangars, and Site 105 - Bronson Field Parts Yard, Bronson Field, Pensacola, Florida dated February 2012.

The Site Investigation activities that will be implemented first during February 27 to March 7, 2012 include using a direct push technology (DPT) rig to collect soil and groundwater samples. The soil and groundwater information collected during this event will be used to select locations for permanent monitoring wells. The monitoring well installation event is anticipated to occur between March 19 through 29, 2012. Also, the presence of the five USTs at Site 103 will be confirmed prior to the field investigation using magnetic and ferrous metal detectors. In addition, utility clearance will be completed prior to the Field activities. Figures showing the proposed soil and groundwater sampling locations are provided in the Field Sampling Plan and Quality Assurance Project Plan.

If you have any questions, please call me at (850) 385-9866, Extension 1353.

Sincerely yours,

Frank Lesesne, P.G.
Project Manager
