RE: Contamination Assessment Report Addendum, U.S. Navy
Outlying Landing Field (OLF) Bronson, Site 1107,
Pensacola, Florida

Dear Mr. Glover:

I have completed the technical review of the above referenced document dated November 1998 (received December 7, 1998). Please excuse the late review of this report.

I have the following comments that must be addressed in an Addendum Report for this site in order to meet the requirements of Chapter 62-770, Florida Administrative Code (FAC).

1. The latest groundwater analytical results were from samples collected on August 26, 1998. Some groundwater samples were collected as early as March 11, 1996. Because conditions at the site have changed due to the spreading of free product, I recommend resampling all of the monitoring wells.
2. Prior to groundwater sampling, water level elevations should be taken in all monitoring wells, including deep wells. The water level elevations should be used to confirm groundwater flow direction and to determine if there are vertical gradients.
3. A free product assessment should be performed to delineate the extent and thickness of free product. Since the product viscosity may prevent a measurement using an electronic oil/water interface probe, I would recommend using a clear disposable bailer to determine apparent product thickness. If free product is still present at the site, then product recovery should be

initiated in accordance with Chapter 62-770.300(1) FAC.
If any free product removal activities have been
conducted at this site, they should be documented and
submitted to the Department for review.

4. The location of integral piping and dispensers should also be included on the figures. This information would be valuable in interpreting the results of soil and groundwater analytical data.

If I can be of any further assistance with this matter, please contact me at (850) 921-9989.

Sincerely,

Joseph F. Fugitt
