Mr. Greg Campbell
Code 00400 Building 624
190 Radford Boulevard
Pensacola, FL 32508-5000

Dear Mr. Campbell:

Subject: Disposal of Collected Investigation Derived Waste (Monitoring Well Soil Cuttings at Outlying Landing Field (OLF) Saufley Field– Site 2406

Tetra Tech NUS, Inc. has collected Investigation Derived Wastes (IDW) during the Underground Storage Tank (UST) Investigation, and is notifying you of our planned onsite disposal. During the monitoring well installation for the Site 2406 Site Assessment Report Addendum soil cuttings, drilling mud, and purge/development water were collected and stored onsite in 55-gallon drums.

Review of the field screening results and analytical data for soil samples collected from the monitoring wells indicated regulatory standards (Groundwater and Surface Water Cleanup Target Levels (CTLs) listed in Table 1 of Chapter 62-777, F.A.C) were not exceeded in the soils and drill mud collected. Therefore, the collected soil cuttings and drill mud will be spread on the ground surface at the facility. The materials will be spread over a larger area surrounding the current storage location in such a manor as to limit surface runoff and not effect current land use. A summary of the field screening data and analytical data is attached.

The groundwater development water and purge water will not be disposed at this time. If you have any questions or require additional information, please contact me at (850) 385-9899

Sincerely,

Gerald Walker
Project Manager
Tetra Tech NUS, Inc.
