RE: Final Site Inspection Report for the Site 3 Pistol Range, Munitions Response Site (UXO 001), Outlying Landing Field Saufley, Pensacola, Florida.

Dear John:

I have completed my review of Final Site Inspection Report for the Site 3 Pistol Range, Munitions Response Site (UXO 001), Outlying Landing Field Saufley, dated July 2014 (received July 10, 2014), prepared and submitted by Tetra Tech, Inc. The report documents that surface soils at the site have been impacted by past pistol range activities, but not at concentrations that require remediation. Most of the lead detected in surface soils was detected in samples collected from 0 to 0.5 feet below land surface and was attributed to lead bullets and bullet fragments. The average lead concentration was determined to be less than the Department's residential soil cleanup target level.

Appendix E contains the Field Activities Report for Saufley Field Site 3 Pistol Range. This report describes the work conducted to remove bullets, bullet fragments and casings from the Pistol Range berm. According to the report, approximately 120 cubic yards of soil was excavated and processed through screens to remove bullets, bullet fragments and casings. The removal appears to be consistent with the Department's *Best Management Practices for Environmental Stewardship of Florida Shooting Ranges (2004 Edition)*.

Based upon information provided in the Final Site Inspection Report and Field Activities Report, the Department has determined that the site was not contaminated with lead at levels requiring remediation pursuant to Chapter 62-780, Florida Administrative Code, and that residual risks
