Re: Contamination Site NP32 - Crows Landing Naval Auxiliary  
Landing Field, Crows Landing, CA

The Hazardous Materials Division has reviewed the report of clean up of soil contamination resulting from the September 25, 1992 crash of a P-3 aircraft at Crows Landing Naval Auxiliary Landing Field (NAVY, October 16, 1990 and October 22, 1992). Approximately 2,500 gallons of JP-5 fuel was released on to the concrete runway during the crash. The majority of the fuel was consumed in the resulting fire. The unburned fuel and fire suppressant flowed to the asphalt and gravel edge of the runway.

All possible soils were removed and the impacted area covered with an asphalt cap. Based on the above report and a site inspection, additional work to address the soil contamination associated with the September 25, 1992 crash of a P-3 aircraft is warranted at this time. Please call me at (209) 525-4150 if you have any questions.

  
ROBERT FOURT
