5 (continued)	<p>would be subject to deed restrictions, thereby making any future use of these sites problematic.</p> <p>ETRPA believes that the only way to ensure the public health and safety is by the removal of the landfill material and its replacement with native soil. Monitoring actions proposed by the Navy for the future cannot guarantee that the landfill contaminants will not spread either into the groundwater or in some way come into physical contact with individuals either working or living within the proximity of the sites. If any such problems should occur in the future, local governments and the federal government would be faced with further remediation costs, litigation bills and potential healthcare expenses. The situation could become analogous with the cleanup of the McColl superfund site in Fullerton, which took years to resolve in allocating responsibility and in developing and implementing a cleanup plan. The only way this type of situation can be avoided is by the complete removal of the two landfills.</p> <p>Once again, thank you for the opportunity to comment on the remediation proposal for landfill sites 3 & 5.</p>	
<p align="center">Comments by: David I. Shaler and Peter R. Supko, Ninyo & Moore, in a letter dated 10 July 1998 (attachment to letter from El Toro Reuse Planning Authority)</p>		
6A	<p>In accordance with terms of the June 8, 1998, Agreement for Contract Services between the El Toro Reuse Planning Authority (ETRPA) and Ninyo & Moore, we have reviewed the subject Feasibility Study (FS) Reports, prepared by Bechtel National, Inc. (Bechtel) for the Southwest Division Naval Facilities Engineering Command (Navy) and dated September 8, 1997. We have also reviewed other available relevant documents provided by ETRPA and other sources.</p> <p>The FS reports were reviewed for technical completeness, accuracy, and conformance with generally accepted standards of practice for this type of work. Our scope of services included a substantial review intended to identify any major shortcomings, major inconsistencies, and significant information gaps in those areas considered most likely to influence the conclusions and recommendations presented in the</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.</p>

Letters Received During Public Comment Period

Number	Comments	Response
<p>6A (continued)</p>	<p>documents. Particular attention was paid to the identification and screening of remedial technologies, development of remedial alternatives, and detailed analysis of remedial alternatives as discussed in the reports.</p> <p>The documents reviewed by Ninyo and Moore were limited to the subject FS reports and the documents listed below. Our scope of services did not include an evaluation of the geotechnical (i.e., slope stability, compaction, differential settlement) aspects of the proposed landfill cap designs and/or removal actions.</p> <p>This letter report contains our opinions and conclusions regarding the reviewed FS reports.</p> <p>[Background information and documents reviewed not included]</p> <p>The CERCLA Municipal Landfill Presumptive Remedy</p> <p>As stated by the EPA (EPA, 1993), presumptive remedies are preferred technologies for common categories of sites, based on historical patterns of remedy selection and EPA's scientific and engineering evaluation of performance data on technology information. Characteristics for applicability of a presumptive remedy include:</p> <ul style="list-style-type: none"> • Risks are low-level, except for hot spots; • Treatment of waste is usually impractical due to the volume and heterogeneity of waste; • Waste types include household, commercial, nonhazardous sludge, and industrial solid wastes; • Lesser quantities of hazardous waste are present as compared to municipal wastes (EPA, 1996). <p>Based on our review of the FS reports, Bechtel reported no evidence of the placement of "Military-Specific Wastes" such as chemical warfare agents, munitions hardware, or smoke grenades which would preclude application of a presumptive remedy.</p> <p>Inherent with adoption of a presumptive remedy is the reduction or elimination of characterization of landfill contents (EPA, 1996): "Relying on existing data to the extent possible rather than characterizing landfill contents (limited or no landfill source investigation unless there is information indicating a need to investigate hot spots)". The FS documents did not report the presence of soil hot spots.</p>	

Letters Received During Public Comment Period

Number	Comments	Response
6A (continued)	<p>General Comments</p> <p>Based on our review of the listed documents, the monolithic cap remedy (Alternative 3) was determined by the Navy to be the least costly presumptive remedy capable of adequately protecting human health and the environment. It is our opinion that the Navy did not place as high a degree of emphasis on likely future land uses, as proposed by the Local Redevelopment Authority (LRA) or ETRPA (ETRPA, 1998), as is the intent of applicable regulations. As indicated by EPA, "...at military bases undergoing base closure procedure, where expeditiously converting property to civilian use is one of the primary goals, land use may receive heightened attention." (EPA, 1996). Specifically, the EPA emphasizes the importance of the Base Realignment and Closure Team working closely with local reuse groups to integrate reuse planning into the cleanup process. The Department of Toxic Substances Control (DTSC) has indicated (DTSC, 1998) that it "...remains concerned that the Marines' proposed remedy (native soil caps) may not be compatible with the Reuse Plan for future land use as proposed by the Local Redevelopment Authority (LRA) for landfill Sites 3 and 5." Of the alternatives evaluated under the presumptive remedy, the monolithic soil cap is the most restrictive alternative with regard to future land use.</p>	

Letters Received During Public Comment Period		
Number	Comments	Response
6B	<p>Specific Comments</p> <p>Estimates of the extent and volume of waste which are developed with minimal characterization, as is the case with the presumptive remedy method guidelines, and was the case with Sites 3 and 5, carry with them a large degree of uncertainty. The actual extent and volume of wastes may vary significantly. A subsurface evaluation may better define the actual volume and extent of the buried wastes.</p>	<p>Response: The DON agrees that the estimates of waste volumes carry a large range of uncertainty. The DON also agrees that additional characterization would be required to support clean closure. However, the DON does not agree that further characterization of the landfills is necessary because adequate information has already been gathered to determine the lateral extent of the landfills and support selection and design of an appropriate landfill cap for Sites 2 and 17.</p> <p>The U.S. EPA document "Presumptive Remedy for CERCLA Municipal Landfill Sites" provides the following guidance for site characterization under the presumptive remedy framework:</p> <p>"The use of existing data is especially important in conducting a streamlined RI/FS for municipal landfills. Characterization of a landfill's contents is not necessary or appropriate for selecting a response action for these sites except in limited cases; rather existing data are used to determine whether the containment presumption is appropriate. Subsequent sampling efforts should focus on characterizing areas where contaminant migration is suspected, such as leachate discharge areas or areas where surface water runoff has caused erosion."</p> <p>The remedial investigation approach for Sites 2 and 17 was designed to support the presumptive remedy (i.e., capping) selected for these sites. Because this presumptive remedy meets the remedial action objectives, supports reuse, and is cost-effective compared to clean closure (see response to Comment 4A), clean closure and the further subsurface evaluation necessary to support clean closure are not required.</p> <p>Please see the response to Comment 4A for additional discussion of this issue.</p> <p>Since Sites 2 and 17 will be transferred to the USFWS, they will not affect the El Toro Reuse Planning Authority's Millennium Plan.</p>

Number	Comments	Response
6C	<p>In our opinion, extensive characterization of the source material for the proposed monolithic soil caps should have been performed by a qualified geotechnical engineer. In the case of Site 3, only one soil sample from a potential material source was characterized for hydraulic conductivity. This sample was collected from a depth of approximately 80 feet below the surface. The hydraulic conductivity of a sample collected at this depth would likely be less, due to compaction, than a sample collected from a surface or shallower near surface source. We would assume that a surface exposure and/or a shallow near surface source would serve as the cap material. Additional testing and data must be presented to support the conclusion that the monolithic soil cap will be equivalent to the Title 27 prescriptive cap. The cost estimate to implement the monolithic soil cap remedy (Alternative 3) may vary significantly depending on the location of the source material.</p>	<p>Response: Subsequent to preparation of the feasibility studies for the landfill sites, the DON did perform such a characterization. To confirm the hydraulic conductivity used in the FS evaluation, the DON collected ten soil samples from the area designated as the proposed borrow source. The soil samples were collected on 21 August 1997 and were submitted for geotechnical soil testing including:</p> <ul style="list-style-type: none"> • moisture content (American Society for Testing and Materials [ASTM] method D2216); • maximum density and optimum moisture content (ASTM D1157-91); • Atterberg limits for liquid limit, plastic limit, and plasticity index (ASTM D4318-93); • particle-size analyses (ASTM D422-63); and • triaxial permeability tests on a relative dry density of 90 percent at optimum moisture content (ASTM D5084). <p>Preliminary results indicated that the borrow source will provide an adequate source of material to be used for the monolithic soil cap. Additional sampling and evaluation will be performed at the remedial design phase.</p>

Letters Received During Public Comment Period		
Number	Comments	Response
6D	The actual source material of the monolithic cap should be tested for concentrations of metals and other possible contaminants.	Response: DON agrees and plans to test the source materials prior to use in the landfill cap. In addition, the borrow source was selected based on an extensive historical review and surface reconnaissance of the site. No wastes were present in the area and historical photographs showed that widespread excavation of the site had occurred in the early 1980s to lower the hill at this location for aircraft safety. No backfilling or other uses of the borrow area have occurred since the early 1980s.
6E	The FS reports indicate that annual grasses will be used for erosion control on the monolithic caps but the figures do not show a vegetative layer. The FS reports should be more specific with regard to the grasses to be used and should document past successful use of the selected grasses in expected arid situations as well as in non-arid conditions, such as those experienced during an "El Niño." We are concerned that the erosion control measures described may not be as effective as the vegetative layers shown for alternatives 4 and 5.	Response: DON plans to work with the USFWS to select the appropriate vegetative cover, means of application, and required maintenance for Sites 2 and 17. Please see pages 4 through 5 of DON's response to USFWS's comments. These are included in a separate section of this Responsiveness Summary.
6F	The performance of the monolithic cap with regard to reducing leachate production appears to be based on an assumption of limited precipitation, approximately 12 inches per year or less. It may be worthwhile to reevaluate these assumptions in light of much greater annual precipitation, such as that experienced during the recent El Niño.	Response: In preparation for the detailed design of the landfill caps, DON has performed additional infiltration modeling of the existing cover, the monolithic soil cap, and the prescriptive (clay) cap using 44-year historical daily rainfall records from 1948 to 1991. Based on the records the annual precipitation averages about 14.14 inches per year and ranges from 3.85 inches per year (1953) to 34.04 inches per year (1983). The modeling results show that the monolithic soil cap continues to perform in a manner equivalent to the prescriptive clay cap under various rainfall scenarios.
6G	On page 5-10 of the Site 5 FS, it is stated that the LRA's proposed reuse of the site is "...as an irrigated [emphasis added] golf course." ETRPA has proposed a similar use. It is indicated on the same page that "...Alternative 3 reduces the amount of infiltration by 49 percent and is not as effective [emphasis added] as the Title 23 [27] prescriptive cap which reduces infiltration by 85 percent." The FS goes on to indicate that institutional controls will be necessary to prevent irrigation. The necessity to prevent irrigation clearly contradicts the proposed use as an irrigated golf course.	Response: This comment addresses Site 5 and will be addressed in the Record of Decision for that site.

Letters Received During Public Comment Period

Number	Comments	Response
6H	<p>In the FS documents, institutional controls are described in general terms. The discussions of institutional controls should be expanded and more specific.</p>	<p>Response: The DON worked closely with the regulatory agencies, especially the DTSC, to develop the institutional controls language that is found in the FS report and in this ROD and believes that this language conveys the appropriate level of detail for such documents. To support this belief, the DON performed a search of 35 U.S. EPA Region IX RODs for federal facilities and reviewed and followed draft guidance published by the U.S. EPA on institutional controls.</p> <p>Fifty-six Region IX federal facilities RODs were identified and 35 were reviewed. The RODs were signed between 1991 and 1998 and represent a cross section in terms of contaminants of concern, impacted media, date of issue of the ROD, and use of institutional controls. It was concluded that the discussion of the institutional controls in the RODs reviewed was generally much less detailed than the discussion in the Sites 2 and 17 FS documents and the ROD containing this Responsiveness Summary.</p> <p>The U.S. EPA Workforce on Institutional Controls has prepared draft guidance titled "Institutional Controls: A Reference Manual" (U.S. EPA 1998). The draft manual proposes that the decision document (in this case the ROD) should focus on the goals to be achieved by institutional controls, rather than specifying the precise form of institutional controls to be implemented (in order to provide adequate flexibility after the ROD is signed) and should focus on performance standards setting forth the aims that the institutional controls are intended to achieve (e.g., prevent exposure to contaminated groundwater by prohibiting well drilling). The ROD should also contain plans for long-term monitoring of compliance with institutional controls.</p> <p>The institutional controls language contained in this ROD has been revised from that found in the FS reports for Sites 2 and 17. The language in the ROD is intended to comply with U.S. EPA guidelines by focusing on the goals to be achieved by the institutional controls and discussing in some detail the kinds of controls envisioned. Much of the language has been taken from approved RODs for other federal facilities and is intended to provide a starting point for development of detailed institutional controls required for property transfer. It is intended that the DON and the transferee will develop the exact wording of the institutional controls at the time of transfer.</p>

Letters Received During Public Comment Period

Number	Comments	Response
6I	<p>The Site 3 FS appears to preclude the LRA's and ETRPA's planned use of Site 3. As indicated in the Site 3 FS, the LRA's planned use of the site is "...light industrial/commercial." ETRPA's planned use for the site is residential. A native soil cap, access to which is controlled by fences and other institutional controls, appears to preclude the proposed uses. As indicated in the referenced LRA document, the Navy believes the "...capped landfill areas can be integrated as an open space in a commercial development." In our opinion, this logic avoids the land use question entirely. By use of this logic, the capped landfills could, from the standpoint of protection of human health and environment, be integrated into any kind of development where open space is acceptable, including residential.</p>	<p>Response: This comment addresses Site 3 and will be addressed in the ROD for that site. Since Sites 2 and 17 will be transferred to the USFWS, they will not affect the El Toro Reuse Planning Authority's Millennium Plan.</p>
6J	<p>The FS documents should provide more thorough documentation and detail regarding the cost estimates for removal of landfill wastes ("clean closure"). The FS documents should also state clearly that valid cost estimates for clean closure can only be developed with more extensive site characterization than is consistent with the presumptive remedy.</p>	<p>Response: Appendix D of the Site 2 FS provides a detailed construction cost estimate for clean closure. Assumptions are included. As is true for all cost estimates in the FS reports, costs are provided for comparative purposes between alternatives and are based on actual costs derived from U.S. EPA Superfund projects.</p> <p>The FS reports have been accepted as final by the BCT.</p>
6K	<p>Conclusions</p> <p>Based on our review of the referenced documents, we present the following conclusions regarding the draft FS reports for Sites 3 and 5:</p> <p>The monolithic soil cap (Alternative 3) may be protective of human health and the environment provided the hydraulic characteristics of the yet to be specified source material are such that the cap will provide performance equivalent to the Title 27 Prescriptive Cap. Equivalence with the Title 27 Prescriptive Cap has not yet been shown for Sites 3 and 5.</p>	<p>Response: This comment refers to Sites 3 and 5 and will be addressed in the ROD for these sites.</p>

Letters Received During Public Comment Period

Number	Comments	Response
6L	The monolithic soil cap, as described in the FS reports, is incompatible with the respective land uses proposed for Sites 3 and 5 by the LRA and ETRPA. Presumptive remedy alternatives 4, 5 and 6 are protective of human health and the environment and are compatible with proposed land uses.	Response: Please see response to comment 6K.
6M	The DTSC, the lead regulatory agency for base closure, appears to favor alternative 4D, a single-barrier cap with institutional controls and monitoring using a synthetic flexible membrane liner for Site 5, and alternative 5B or 6B (both asphalt caps) for Site 3. These alternatives are protective of human health and the environment and provide more flexibility with regard to future land use.	Response: Please see response to comment 6K.
6N	Depending on the actual extent of landfill wastes at the two sites, clean closure (i.e., removal) may be an appropriate and cost effective closure method. In order to evaluate the appropriateness and cost effectiveness of clean closure, the extent of landfill wastes must be more clearly delineated. In order to more accurately delineate the extent of landfill wastes, additional characterization, including a comprehensive subsurface evaluation within the suspected landfill boundaries, would be necessary. If such additional evaluations of landfill waste were to result in redefinition of waste area and volume, cost estimates for the various presumptive remedies would need to be redetermined and compared with the "clean closure" removal option. [Concluding paragraph not included].	Response: Please see response to comment 6K.
Comments by: <i>Carolyn J. King, Irvine, California resident, in a letter dated 10 July 1998</i>		
7	<u>NO NO NO!!</u> For several years, we have been aware that toxic substances from the El Toro base are seeping into our water table in Irvine. A "4-foot thick single-layer soil cap" will <u>NOT</u> provide adequate protection to the residents of the area. We need complete removal, or a program like the one used at the McColl site in Fullerton. Don't take the "quick & cheap" approach!	Response: Sites 2 and 17 are not the source of toxic substances entering the water table in Irvine. It is assumed that the comment about "toxic substances from the El Toro base are seeping into our water table" refers to contamination in groundwater caused by Site 24. Site 24 is the Volatile Organic Compound (VOC) Source Area. Releases of wastes at the surface of this site and to drains below Site 24 are believed to have contaminated the soil. VOCs also moved from the soil to groundwater below the site and appear to be moving down to lower levels in the water table (which are used for drinking-water wells in some areas but not where the contamination is) in response to agricultural pumping in the area of the Station.

Letters Received During Public Comment Period

7 (continued)		<p>The DON is planning to take an aggressive approach to removing the VOCs from both the soil at the source area and from the groundwater beneath Site 24 and outside the boundary of the Station. Remediation of VOCs in soil was addressed in the interim ROD for Site 24. This ROD was signed by regulatory agencies in September 1997 and design of the remedial system is complete. The ROD for VOCs in groundwater is being drafted and is planned to be issued in 2000.</p> <p>The landfill sites are not a source of the regional groundwater contamination referred to in this comment. Extensive sampling below Sites 2 and 17 showed that, even without a landfill cap, there has been minimal, localized impact from the landfills on groundwater. Adding the monolithic cap will minimize the potential for any impact on groundwater in the future because the monolithic soil cap is expected to reduce the amount of infiltration into the landfill by approximately 90 percent. In addition, California regulations require that groundwater beneath the landfills be monitored after the landfills are closed. This monitoring is intended to detect evidence of any future "releases" from the landfill to groundwater so that necessary corrective action can quickly be taken.</p>
<p align="center">Comments by: Jack Miller, REHS Director, County of Orange Health Care Agency, in a letter dated 10 July 1998</p>		
8	<p>The purpose of this letter is to formally submit comments from the Orange County Solid Waste Local Enforcement Agency regarding the proposed plan for the closure of inactive landfill sites 3 and 5 at Marine Corps air Station (MCAS) El Toro.</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.</p>

Letters Received During Public Comment Period

Number	Comments	Response
8 (continued)	<p>The Orange County Health Care Agency, Environmental Health Division, is certified by the California Integrated Waste Management Board (CIWMB) to be the Solid Waste Local Enforcement Agency (LEA) for all cities and unincorporated areas of Orange County. The LEA permits and inspects solid waste facilities (active landfills, transfer stations, and composting facilities), and oversees the assessment, remediation, closure and development of inactive and closed landfills within Orange County. This authority will extend to the closed landfill sites at MCAS El Toro following the de-listing of the inactive landfills as "Superfund" sites. The LEA's regulatory oversight will most likely begin before the redevelopment of the areas encompassing and surrounding landfill site 3 and may also occur prior to the construction of an irrigated golf course at site 5. Therefore, we have a direct interest in the Proposed Plan for the closure of the landfills at MCAS El Toro since the remedy selected for the landfills will have a direct effect on public health and safety issues associated with the reuse of these areas.</p> <p>The assumptions made in the proposed plan appear to be a "best case" scenario based on a limited characterization of the waste material contained in each landfill. Although the landfill gas data collected during the 1991 SWAT test and the remedial investigation suggest that landfill gas generation may be limited, we believe the studies are not adequate to assure migration of landfill gas will not impact the future reuse of the areas adjacent to the landfills. The assumptions made regarding the limited potential for landfill gas generation cannot be validated without a more comprehensive waste characterization which has not been performed at either Sites 3 or 5. In addition, an ongoing monitoring program, including Title 27 permanent gas monitoring probes, should be installed prior to the final selection of the proposed remedy for Sites 3 and 5. Such an installation would provide the gas monitoring data necessary to evaluate the proposed remedy for these sites.</p>	

Letters Received During Public Comment Period		
Number	Comments	Response
8 (continued)	<p>In summary, the LEA is concerned that the proposed remedies for landfill Sites 3 and 5 (native soil caps) are in conflict with the proposed irrigated land reuse at Site 5 and may be in conflict with the proposed reuse of Site 3. Further, the proposed remedies may restrict future land use of the site. The LEA supports the CIWMB, DTSC and Orange County's MCAS El Toro Local Redevelopment Authority's position that other more conservative remedies may be more compatible with future land uses.</p> <p>[Concluding paragraph not included.]</p>	
<p>Comment by: <i>Tayseer Mahmoud, Remedial Project Manager, Department of Toxic Substances Control, in a letter date 8 July 1998</i></p>		
9	<p>The Department of Toxic Substances Control (DTSC) has reviewed the Proposed Plan (PP) for the landfill sites at MCAS El Toro currently out for public review. Based on our review, we find the wording describing DTSC's concerns regarding the proposed remedy (native soil caps) for landfill Sites 3 and 5 does not match the wording requested in our February 25, 1998 and May 5, 1998 letters. The exact wording requested is as follows:</p> <p><i>"DTSC remains concerned that the Marine's proposed remedy (native soil caps) may not be compatible with the Reuse Plan for future land use as proposed by the Local Redevelopment Authority (LRA) for landfill Sites 3 and 5. Hence, it may restrict future uses of the sites. DTSC believes that other remedies may be more compatible with the future land use. For example, Alternative 4D, synthetic flexible membrane liner (FML), appears to be more appropriate for a future recreational use scenario, such as the golf course at Site 5. Alternatives 5B or 6B, asphalt caps, would have a better likelihood of supporting a future light industrial/commercial reuse at Site 3."</i></p> <p>The intent of this comment is to clarify the administrative record and not to request the marines to modify the PP and reissue the public notice.</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the Record of Decision for these sites.</p>

9 (continued)	[Final paragraph not included.]	
<i>Comments by: Charles R. Bennett, Ph.D., Restoration Advisory Board Member, in a letter dated 12 July 1998 and resubmitted during the public comment period</i>		
10A	<p>The attached comments are submitted to you as the designated recipient for comments regarding the action for the Site 2, 3, 5, and 17 Landfills that constitute the Operating Unit 2 at El Toro. The Proposed Plan for OU2 is flawed and should be amended. These are submitted prior to the current deadline of July 13, 1998. A courtesy copy is being faxed to the others listed.</p> <p>References are to the Draft Phase II Feasibility Study Reports for Site 3 and Site 5 Marine Corps Air Station, El Toro, California.</p> <p>General Comment – The bulk of these comments were submitted when the feasibility studies for these sites were released. The DON has not resolved these points since the release of these reports and they are being reiterated for the public record. In many ways the Site 3 and Site 5 landfills are interchangeable, with no major differences beyond the differing volumes of waste; thus, comments for one are generally applicable to the other.</p> <p>For Site 3:</p> <p>A. Page ES-9: The risk drivers are arsenic and chromium. As the arsenic is not even above background and the chromium speciation supports only the less toxic Cr(III), a strong case may possibly be made that there is negligible or no true risk at these landfills. Is it not true that there is little or no risk from this landfill material?</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.</p>
10B	<p>B. Page 2-16, 2.2.2.3: Unit 1, paragraph 3 – Methane concentrations are reported. Are these true methane concentrations or are they TOC's [total organic compounds] reported as methane (see Comment 1)? Is it not true that there is little or no actual release of methane from a waste material that bears little or no resemblance to municipal landfill material?</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.</p>

Letters Received During Public Comment Period		
Number	Comments	Response
10C	C. Page 2-23 to 2-25: Maps were missing from the review copy; thus, it was impossible to evaluate the quality or location of the soil contaminants. Since these contain the only significant risk drivers, this is a serious omission.	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10D	D. Page 2-31: Aluminum can produce false positives for some types of arsenic analysis. As arsenic is the sole risk driver, it would be sad to find that the arsenic risk was actually a chimera. Has the possibility of low false positives for arsenic been eliminated?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10E	For Site 5: E. Page ES-1: Minor waste segregation may allow some materials to be rated non-hazardous or suitable for landfill day cover. This consolidation should be given careful consideration. As the waste volume is only 30,000 cubic yards, excavation to one of the other landfills in the OU 2 or OU 3 would yield complete clean closure impacting 6 acres of land around Site 5 worth many millions of dollars.	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10F	Is there any regulatory barrier to designating all of Site 5 waste as "Hot Spot" material as defined in USEPA protocols, thus permitting complete excavation for Site 5 for a clean closure?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10G	F. Page ES-5: Again, the risk drivers are only arsenic and chromium, is there true risk at this site?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10H	G. Page ES-7: Consolidation, beneficial reuse of materials, and clean closure is the only appropriate plan for Site 5, and it will cost much less in both the short and long run than any of the proposed plans for Site 5. The true cost for this approach if released into the open commercial market would be less than \$2M and would free the land for any use by the receiver. The DoN proposed plan would not only cost the taxpayers more, it would leave a site with heavy, restrictive institutional controls and limited use to the receiver.	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.

Letters Received During Public Comment Period		
Number	Comments	Response
10I	Is it not true that the cost of consolidation and clean closure for Site 5 is statistically indistinguishable from the cost of the dirt cover and monitoring in perpetuity? How can a cost argument be made that an alternative is more costly when the error of the measurement does not permit the distinction between the estimated costs? Did the DON make an unwarranted distinction based on cost in this process of proposing capping over excavation for the proposed plan for Site 5?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10J	Is it not true that the cost estimate for consolidation and clean closure for Site 5 used an estimate of 22,500 cubic yards of the material in Site 5 that would require expensive Class I hazardous disposal? Since the estimated waste in Site 5 is only 30,000 cubic yards, this assumption means that the DoN estimates that the waste is 75% serious hazardous waste when they are asked to excavate it for a clean closure, which conflicts with their proposed plan to just put four feet of dirt over a not very hazardous waste. Does the DoN have any intention of resolving the obvious conflict that a highly hazardous Site 5 landfill (by DoN estimation) that is too expensive to be moved will then be just covered with dirt and just monitored because that meets a minimal CERCLA standard since the Site 5 waste is not a serious hazardous waste risk (by DoN estimation)?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10K	H. Page 2-2, Section 2.1: Incinerated waste should not necessarily be considered a municipal landfill component. It is the biomass degradation that produces the methane and severe settling in a more typical municipal landfill. Cellulosics constitute more than 70% in most landfills (reference – William Rathje). The case presented by the DON that this is a municipal landfill is based solely on a misrepresentation of the testimony of witnesses that note that incinerator ash went into the landfill.	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10L	I. Page 2-11: Note “TOC as methane,” and “no organic speciation was performed” means that the presence of methane was never truly demonstrated. There is no evidence of methane generation at this landfill.	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.

Letters Received During Public Comment Period		
Number	Comments	Response
10M	J. Page 2-12, Section 2.2.2.4: Could SVE or soil ventilation yield a non-hazardous waste?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10N	K. Page 2-15: See Comment I, is there actually any methane present?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.
10O	L. Page 2-17: It may require remediation if it is above background, but does it require remediation if it is not above background?	Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the ROD for these sites.

**RESPONSE TO COMMENTS
FROM THE 18 JUNE 1998 PUBLIC MEETING**

RESPONSIVENESS SUMMARY
MARINE CORPS AIR STATION – EL TORO, CALIFORNIA
PROPOSED PLAN, OPERABLE UNIT 2B, LANDFILL SITES 2 AND 17

Comments from 18 June 1998 Public Meeting

Comments by: *Gail Reavis, Marine Corps Air Station El Toro Restoration Advisory Board (RAB) member, at the Public Meeting on 18 June 1998*

Number	Comments	Response
1A	<p>I want to say on the landfills, although I'm concerned and not real happy about all of the landfill remedies, I am most concerned about the Site 5.</p> <p>While I understand CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) and how the RAB is able to deal with the site, and they are handling it adequately according to what the law is, it is not going to work for the County or the people in the County to have any site with deed restrictions on them. So I want that to go on the record. I don't want to see any deed restrictions.</p> <p>I know that there's also a possibility that's been discussed, on Site 5, to put in a membrane, a liner. For many reasons that have been stated, that's not going in at this point.</p> <p>I want to go on record and say that I, at the very least, want to see the Department of the Navy install and pay for the actual liner and not have to have that responsibility go back on the County. Because whatever that land use is, it is going to need to be cleaned up to a higher standard than the four feet of dirt and deed restrictions that are currently intended for it.</p>	<p>Response: This comment addresses Site 5 and will be addressed in the Record of Decision for that site.</p>
1B	<p>Skipping to my other subject: I wrote a letter May 30th to Joseph Joyce and copied Greg Hurley, Wayne Lee, two congressmen and five supervisors. It was in regards to my request at the March (1998) RAB meeting to agendize (sic) Wayne Lee's statement that \$89,000,000 had been spent on the environmental cleanup.</p> <p>As a member of the RAB, I feel that so few citizens from Orange County attend these meetings. And it has been explained to me, more than once, that I am in the public; and part of my job is to take</p>	<p>Response: The cost of the environmental cleanup was discussed at the Restoration Advisory Board meeting held on September 30, 1998. However, since this comment does not relate to the selection of a remedial action for Sites 2 and 17, it will not be discussed further in this Responsiveness Summary.</p>

Comments from June 18, 1998 Public Meeting

Number	Comments	Response
<p>1B (continued)</p>	<p>this information back to the public. So I asked what I thought was an appropriate question, which is I'd like to see an accounting of the \$89,000,000. I was put off.</p> <p>I assumed -- maybe incorrectly, I assumed, after requesting in March, that it would be agendized (sic) at the next meeting in May.</p> <p>I was then told, in May, that it was not on the agenda; and that the RAB was too busy, at this time; and that there was no date set for it to be on the agenda; and that there was no place for me to go to get that information.</p> <p>And that was why I took the course of writing the letter, to say if I, as a member of the RAB, cannot come to our own committee and ask for details of the information that is supposedly legal record, then the public at large doesn't stand a chance. So as far as I'm concerned, if you won't share it with me, you won't share it with anyone. And that's wrong.</p> <p>I'd not only like to have an answer to my letter, as it states, at the earliest possible date – I have offered to make myself available to come to El Toro to read it, to read whatever records you have, to mainly see, for myself, what \$89,000,000 went for.</p> <p>I'm not making any claim that there's been any wrongdoing. But from the perspective of a few of the RAB members, we don't see much but stacks of paper. And in cases where a hole has been dug and actual work has been done, it would be reassuring to know that and to see the invoices for the paperwork, for the accounting, for the money that shows us that the work has been done, and not just a bunch of reports. I'd like an answer to my letter. I'd like an answer officially. And I'd like the information to be freely shared with the public.</p>

Comments by: Gregory F. Hurley, MCAS El Toro RAB Community Cochair, at the Public Meeting on 18 June 1998

Number	Comments	Response
2	<p>My concerns are that the proposed remedy is the minimal remediation that CERCLA would allow. I do not think this remedy is protective of human health and the environment. And I do not think it accommodates the proposed reuse of the Base.</p> <p>I believe in selecting this remedy, the Marines are ignoring their obligations under CERCLA and the BRAC (Base Realignment and Closure), Base reuse closure statutes, to accommodate the proposed reuse of the facility.</p> <p>The presumptive remedy that the Marines are proposing would not allow significant -- any significant irrigation of the property and, consequently, would not be appropriate for the proposed reuse as a golf course.</p> <p>And I'd like to reference, for the record, the Marines' obligations under the Base Reuse Implementation Manual, Chapter 2.1.13, and the Marines' obligation under the Department of Defense policy on responsibility for additional environmental cleanup after transfer of real property, which is a policy memo dated 25th of July 1997.</p> <p>Under both of those documents, the Marines are obligated to take into account the intended land use that the community tends to put this to. And I think the intended land use is being ignored. And I think inherent in the BRAC statutes is the idea that if the proposed remediation does not accommodate the intended land use, that it's presumptively not protective of human health and the environment.</p> <p>That's all.</p>	<p>Response: This comment addresses landfill Sites 3 and 5. Sites 2 and 17 are planned to be used as a fenced, nonirrigated portion of a habitat reserve. The USFWS has reviewed the proposed remedy for these sites and has found no conflict between the remedy and the intended use. This comment will be addressed for Sites 3 and 5 in a separate Record of Decision.</p>

Number	Comments	Response
3	<p>Everyone in the community that I have spoken with about the Base cleanup is expecting that the Navy Department will transfer property and be clean. And we are all opposed to the transfer of property with restrictions on the ultimate use.</p> <p>That's it.</p>	<p>Response: Although the DON would prefer to transfer all property without restrictions on ultimate use, this is not possible in the case of the landfill sites, which require that institutional controls be implemented when waste is left in place and that monitoring be performed during the postclosure maintenance period. As is the case with any remediation system that will be operational at the time of transfer, institutional controls would be required to allow the DON to continue to access the system and prohibit land uses around the system to avoid damaging or degrading its efficiency.</p>

Comments by: Joe Farber, RAB Member and Technical Assistant, Waste Management, City of Irvine, at the Public Meeting on 18 June 1998

4	<p>What I want to concern myself with is the Sites 3 and 5 plans for remediation adjusted to the potential usage of it that they pretty well agreed to by both the Land Reuse Agency, as well as the City of Irvine and other interested entities, of the disposition in El Toro mop clean (sic).</p> <p>We feel that the best solution for an accepted reuse for them would be -- on Site 3, will be a business or retail function and, also, on Site 5, a golf course use looks most promising, and as agreed to by all constituents at this point.</p> <p>So we feel that the proposed remediation that the Navy has, at this point, selected would not meet the criteria for the health and safety and use potential that's been pretty well agreed to by all the parties concerned. And we would prefer, say, outside 5, that a membrane is similar to what the DTSC (Department of Toxic Substances Control) has proposed and recommended be put on Site 5; and then, on Site 3, the repavement solution.</p> <p>A mere cap will not be sufficient, will not be acceptable by the State of California for the proposed reuse for both the community, the City of Irvine, the other agencies involved. And in its reuse of its particular sites, we recommend and suggest that there be further remediation, rather than simple capping, such as the proposal, at this point, with the Navy.</p> <p>Thank you.</p>	<p>Response: This comment addresses landfill Sites 3 and 5 and will be addressed in the Record of Decision for these sites.</p>

Comments by: Dr. Charles Bennett, Ph.D., RAB Member, at the Public Meeting on 18 June 1998

Number	Comments	Response
<p>5A</p>	<p>I don't think the recommended plan of the Navy is a good plan, particularly in regard to Site 5. I'm not concerned about other sites; that would be Site 2, 3 and 17.</p> <p>Site 5, specifically, is a small site; and it should be clean closed. And the way to do clean closure is to remove the material that's there and put it some other place. The kinds of places you can take that include reuse as a cover material on another landfill or incorporation into something like asphalt or concrete, where there's a beneficial reuse. This is a standard remediation procedure that's available for handling these kinds of situations.</p> <p>Also, the volume of waste in Site 5 is a very small volume, relatively speaking. It's approximately 30,000 cubic yards. And the cost of consolidation somewhere else is very cost-competitive with the proposed plan that is in -- that we are in the Public Comment Period on.</p> <p>The proposed plan is a \$4.2 million cap of the waste. The material is -- The other computation of the cost of consolidation that was done had suggested that a cost of consolidation would be \$7,000,000. But that estimate, in my opinion, is very high.</p> <p>First of all, there have been a number of changes that have occurred over the last three years.</p> <p>No. 1, the cost of hazardous waste disposal has dropped significantly. And we can estimate the cost of the hazardous waste disposal used in that estimate is now a high number relative to the current marketplace. And that is a very important point. Because there were two a suggestions made in how Site 5 waste would be handled in assuming consolidation would not be an effective remediation.</p> <p>There was an assumption that 50 percent more waste was present than the current estimate, assuming that material underneath the current waste would be added to the total volume. So you now had an increase in the waste of 50 percent.</p>	<p>Response: This comment addresses only Site 5 and will be addressed in the Record of Decision for this site.</p>

Comments from 18 June 1998 Public Meeting

Comments by: Dr. Charles Bennett, Ph.D., RAB Member, at the Public Meeting on 18 June 1998

Number	Comments	Response
5A (continued)	<p>Further, the -- one of the working assumptions was that this entire waste is 50 percent Class I hazardous material and required that very expensive hazardous waste disposal.</p> <p>We now have three factors that I suggest are overestimates: No. 1, the cost of hazardous waste disposal for Class I that was used; the volume of hazardous waste that was there; and how much really bad is stuff is present.</p> <p>These overestimates mean that the estimate of \$7,000,000 for consolidation is a very high estimate and may, in fact, be much lower.</p> <p>What the Navy and the Bechtel consultants agree to is that the estimate for consolidation had a high error in it. And so, their seven-million-dollar number is a very uncertain number. And when we look at what the capping alternative cost is, it's currently, as in the plan that's presented here, \$4.2 million.</p> <p>Well, that also misses a significant point. If we have a capped site, it will not be available to the impacted community -- and that's the residents of Orange County -- because it will not be freely available for everybody to go wandering on.</p> <p>So we have a missed opportunity value to that land. Since this is approximately two acres of land, we really should say we've missed the opportunity of using two acres of land. Estimated value, in my opinion, is approximately a million dollars for that. So that when we look at the cost of capping, we are not 4.2 million, which is comprised of 1.5 million for the capping and 2.7 million for the monitoring (in) perpetuity, but we have an additional cost of a million of missed opportunity for the use of the land, giving us a real cost of \$5.2 million, versus a very high and uncertain \$7,000,000 for clean closure with a consolidation of the waste.</p>	

Comments from 18 June 1998 Public Meeting

Number	Comments	Response
5A (continued)	<p>In my opinion, those two numbers are indistinguishable. Clean closure is as cost-effective and may, in fact, be more cost-effective than capping it. Clean closure is better for the community, because it gets rid of the problem and gives us a clean property that we can do anything we want with. We can put a day-care center on it; we can grow lettuce and tomatoes if we want to. But if we have it capped with the current plan, we cannot even irrigate it. And we have a fenced-off bit of scrub land that will not be of any value to the impacted community, which is Orange County and the Orange County taxpayers.</p> <p>I am strongly against presuming -- that is a regulatory word -- that the capping of Site 5 is a good idea for the community. It's a bad idea for the community. We should be strongly opposed to it. And we should be strongly recommending and pressing the EPA (Environmental Protection Agency) and the Navy to do a clean closure, which is likely to cost less than the plan of a cap.</p> <p>Our proposal of clean closure also takes care of the problem forever, whereas capping leaves the waste in place. That means the rest of the Orange County people have to live with the fact that there's two acres of contaminated land that they can never use again.</p> <p>That's my comment.</p>	
5B	<p>There is an important issue with the way the Navy operates their holding of public meetings, period.</p> <p>This method of posters is an extremely ineffective method of communicating with the public. It wastes government time and staff time putting it together, and does not give the public the opportunity to contribute to the process of the CERCLA process. And I am strongly opposed to this type of meeting format. It is meeting a very simple minimum of CERCLA, but it is not effectively interacting with the community. It is not giving the community an opportunity to interact with both the responsible parties and the regulatory parties. I'm strongly opposed to this format for a public meeting, and wish that it be changed in the future.</p>	<p>Response: The public meeting held on 18 June 1998 conforms to guidance in CERCLA and was chosen because it allowed residents and other interested parties to meet one on one with DON and agency personnel to obtain information and ask questions they might have regarding the proposed alternative for remediation of the landfill sites. It was felt that this type of meeting would allow all attendees, even those who are generally reluctant to speak before a large group, to have an opportunity to ask questions, raise issues, and voice their concerns. A public recorder, or court reporter, was available to record public comments on an individual basis. There have been three public meetings held to date to discuss proposed plans for remedial actions at MCAS El Toro sites. Although there have been some negative comments about the format of these meetings, the majority of verbal and written comments received from the public about the meeting format have been very positive.</p>

Comments from 18 June 1998 Public Meeting

Number	Comments	Response
5B (continued)		<p>More specifically, the public meeting held on 18 June 1998 meets the requirements set forth in CERCLA Sections 117(a) and (d) and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) at 40 <i>Code of Federal Regulations</i> (CFR) Section 300.430(f)(3) as follows:</p> <ul style="list-style-type: none"> • Advance notice of the availability of the Proposed Plan was provided in the <i>Los Angeles Times</i> (Orange County Edition) and in the <i>Orange County Register</i>. This exceeds regulatory requirements that notice be published in one newspaper. • The Proposed Plan and associated supporting documents, such as the RI and FS reports, were made available for review/comment in the administrative record. • The Proposed Plan and public notice both announced the availability of the administrative record and information repository. • The public meeting provided a forum for both written and oral comments. In addition, interested parties were encouraged to submit written comments to Joseph Joyce, the Base Realignment and Closure (BRAC) Environmental Coordinator, by mail or fax. Mr. Joyce's address and fax number were provided in the Proposed Plan. • A 60-day public comment period (15 May 1998 to 15 July 1998) was allowed. This is longer than the minimum 30-day public comment period required by law. • The public meeting was held at the Irvine City Hall in close proximity to MCAS El Toro. • A transcript of the public meeting was kept. This transcript was later made available at the administrative record file at MCAS El Toro. • A written responsiveness summary was prepared. The summary consisted of all submitted comments along with responses to these comments.

Comments from 18 June 1998 Public Meeting

Number	Comments	Response
5B (continued)		The public meeting was publicized through notices in the <i>Los Angeles Times</i> (Orange County Edition) and the <i>Orange County Register</i> ; media alerts; and mailings to 1,800 households, businesses, public officials, and agencies. The DON is also exploring additional ways to encourage the public to participate in upcoming public meetings.
Comments by: Bob Hartman, Lake Forest resident, at the Public Meeting on 18 June 1998		
6	<p>And I am opposed to the presumptive remedy; i.e., capping and monitoring -- I'm going to divide these into a couple sections.</p> <p>The question that I think the public should have is that if a site is going to be monitored for thirty years, obviously, it's because there is a potential risk factor involved. And why would the community or the County want to acquire a piece of property that's got a potential risk factor, especially when a clean closure, in my estimation, would be far less expensive and far more environmentally sane.</p> <p>I've been in the industry, the environmental industry, for about a dozen years or so. I've done some calculating. And if you're taking a look at 30,000 yards of the soil at the landfill there, including the cost of excavation, including the cost of sampling, say, every hundred yards or so for everything under the sun, including transport and disposal at the various facilities that would take it -- Now, this doesn't include on-site recycling, just getting rid of it at another site. If we were to figure a high end of 20,000 yards being nonhazardous material that could go to a Class III landfill and 10,000 yards that would even be Cal. Haz. or RCRA (hazardous waste according to the State of California or the Federal Resource Conservation and Recovery Act) that would go to a Class I landfill, the cost of the whole process there would be no more than two-and-a-half million dollars. If the proportion was more than 10,000 yards of Cal. Haz. or RCRA material, then I think that should even raise some more eyebrows as to why it would be left in place with monitoring going on. That's a very, very bad risk.</p> <p>That's basically what I have to say.</p>	<p>Response: Closure and postclosure maintenance standards for landfills contained in California regulations (i.e., Title 27 CCR 21090) require that various media (e.g., groundwater, surface water, soil) be monitored throughout the postclosure maintenance period (assumed to be approximately 30 years) to detect any potential releases from the landfill. Based on the minimal amount of such releases (at Site 2 only) in the past (even though the landfills have not been capped since use of the Site 2 and 17 landfills was discontinued in the early 1980s) and the fact that capping would reduce the potential for releases even further, the DON believes that it is highly unlikely that any new releases will be detected in the future.</p> <p>The remainder of this comment refers to Site 5 (based on the number of yards of soil) and will be addressed in the Record of Decision for Sites 3 and 5.</p> <p>Clean closure of Sites 2 and 17 is addressed in the Response to Comment 4A in the section of the responsiveness summary titled "Response to Written Comments Received During the Public Comment Period."</p>

Comments from 18 June 1998 Public Meeting

Comments by: Marcia Rudolph, RAB Member, Lake Forest City Council, at the Public Meeting on 18 June 1998

Number	Comments	Response
7	<p>The concern that I have about the landfills, in general, is the fact that the community does not have the assurance and the comfort level that we know what is in those landfills.</p> <p>And as far as the small ones, 3 and 5, is concerned, the cost of removal action is negligible compared to the cost of either the Millennium Plan or the Airport Plan.</p> <p>Therefore, why not go the extra mile?</p> <p>Do a removal action so that there is no question that there was something left behind.</p> <p>Piggybacking on that, I would like to say that my feeling is that if we do a removal action, I think it should be moved off-site, not removed onto the one of the two landfills.</p> <p>I believe the other two landfills suffer from the same problems as 3 and 5, in that we still don't know, totally, what is in them. And adding to the bulk of what already exists in those two landfills can compound the problem, even though we would know what was in -- what we were putting in, because it would have been checked before it was dumped in.</p> <p>I don't think we want to create more bulk, particularly in Site 2, since it is the Borrego Canyon Wash and since the water from that area ends up in Back Bay, Newport Beach.</p> <p>So my recommendation, from the standpoint of the community, and for the peace of mind of the community, is removal action. Therefore, the community never has to worry what's in those two parts. And, conversely, the community will then realize the ability to sell, redevelop, to end up doing whatever ends up being the final use plan with those sites without having to end up worrying about caps and fills and the rest of it.</p> <p>That does it. Thank you.</p>	<p>Response: Please see the response to Comment 4A in the section of the Responsiveness Summary titled "Response to Written Comments Received During the Public Comment Period" for a discussion of clean closure of Sites 2 and 17.</p> <p>Clean closure of Sites 3 and 5 will be addressed in the Record of Decision for these sites.</p> <p>There are no plans for adding to the bulk of Sites 2 and 17 by removing the contents of Sites 3 and 5 to the other landfill sites. The DON plans to cap landfill Sites 3 and 5 with a cap containing a synthetic membrane liner. Please see the Record of Decision for Sites 3 and 5 for additional details of the remedial action planned for these sites. Also, please see the response to Comment 4B in the section of this Responsiveness Summary titled "Response to Written Comments Received During the Public Comment Period" for a discussion of the potential impact of surface water at Site 2 on Newport Bay.</p>

Number	Comments	Response
8	<p>Well, I want to address the problem of Site 5, the landfill Site 5. And I wanted to tell you something that you might enjoy hearing about, at least Bechtel, maybe, would enjoy this. I don't know.</p> <p>When you look at the presumptive remedy that the EPA promulgates, you -- Shakespeare -- A quotation from Shakespeare comes to mind: "Me thinks you presume too much," meaning you can't presume that the presumptive remedy will be applicable in every instance for every site, every site that needs to be remediated. In particular, we're talking about landfills here.</p> <p>So what I'm saying is that presumptive remedy may be okay for the majority of sites, might be. However, it certainly isn't applicable to Site 5, in my considered opinion.</p> <p>What I'm saying is this: That site characterization that has been done on Site 5 is -- I don't think is up to snuff.</p> <p>By that, I mean, I don't think the worst case scenario for Site 5. I say excavate, transport if need be. Make a determination as to whether it is a Class III, Class II or Class I.</p> <p>My guess is that 99 percent of Site 5 will go to a Class III landfill. And so, therefore, it's not going to cost -- What is it? Thirty dollars a ton to go to the Olinda Landfill. And if it's just what we think it is, which is, you know, just waste, municipal -- We think it's not just municipal waste; we think it's lawn clippings and paper products, things like that.</p> <p>And so, the thing is -- What we need to do is excavate. I feel it would be a good idea to excavate. Don't be afraid of it. It's not like Pandora's box that we're opening up. In the presumptive remedy, we're thinking, "Oh, my God. It could be Pandora's box."</p>	<p>Response: This comment addresses Site 5 and will be addressed in the Record of Decision for this site.</p>

Comments from 18 June 1998 Public Meeting

Number	Comments	Response
8 (continued)	<p>That's nonsense, absolute nonsense. Site 5, I don't believe, is a site that could be characterized as a toxic landfill. But, then again, let's get into it; let's excavate; let's not just hydropunch; let's take a look at that site. Don't be afraid of it. Don't presume -- In other words, don't look at it as being a toxic landfill.</p> <p>Because I've talked to employees that have been on the Base, and that have worked on the Base from '67 to '85, and that were in physical plant at El Toro. And they told me they didn't think Site 5 -- I mean, that was a toxic landfill in any way, shape or form.</p> <p>Well, I would trust their judgment. I honestly would. Because they know. My God, the I.G. inspector would come every year at El Toro, annually. They would hide things; they would bury things at some of the landfills. But they usually would bury equipment. They wouldn't bury toxic drums of anything.</p> <p>So what I'm saying is that because I have this first -- I mean, not secondhand -- I've talked with several of these gentlemen. One fellow in particular -- Well, you might say, "Who is he?"</p> <p>Well, the man's name was Millard Jackson, a civil service employee that worked on Base, on the physical plant, on this Base, from 1996 -- from '68, approximately, to 1995, approximately. And, also, I talked to Chuck Randolph. He's a retired Gunnery Sergeant. He retired in 1970 from the Marine Corps. He worked on the Base, servicing the different machines, coin-operated machines. So he was here on the Base all the time. And he knew what was happening. He was there.</p> <p>By the way, if I'm not mistaken -- My God, he was with the fire company, crash crew. So he would know -- He knows about the burn pits, and things like that. The guy's really knowledgeable. He said, "Don, I don't think there's" -- Of course, he's only one person and only gives one particular P.O.V., or point of view. But I have a tendency to want to trust his judgment, and particularly about Site 5.</p>	

Comments from 18 June 1998 Public Meeting

Number	Comments	Response
8 (continued)	<p>I guess what I wanted to say, the idea is, I feel very strongly that you cannot, you will not -- we're going to fight you, tooth and nail, if you decide to give us deed restrictions on this property. You will not do that. I swear, as a consultant, that Cal-EPA, DTSC (California Environmental Protection Agency, Department of Toxic Substances Control) Advisory Group consultant to the ETLRA (El Toro Local Redevelopment Authority) and the C.A.C., Citizens Advisory Commission -- I can assure you that I'm going to the Department of Navy, tooth and nail. And I will go, with all due respect, to Bechtel Clean II, also, on this.</p> <p>You know, the idea is not to monitor forever, for decades. No, you're not going to transfer this property with deed restrictions. It's not going to happen. Over my dead body. And I feel very strongly about that.</p> <p>Not only that, but that property, it's such a small site. It's easy to excavate. It's easy to remediate. For God's sake, let's do it, let's do it this way. In this particular instance, it needs to be excavated, transported. It must happen. It must not be capped. I don't care how you cap it. If you cap it with asphalt or asphaltic concrete or cement concrete, if you cap it with a natural soil, hey, I don't want it capped. I want it removed, and removed from the property.</p> <p>It's so close, as you know, to the golf course right there. And I've gone to the golf course so many times for lunch. I enjoy going to the golf course, to the cafe there. And it's a joy to go there. And I think that the golf course could be expanded to encompass Site 5. It should be part -- Site 5 should go away, and the golf course should be expanded in that direction. I see that it's a plausible way to go on this. And I just don't feel Site 5 should exist.</p> <p>Anyway, I think I'm sort of being redundant now a bit, Jeanine. So forgive me for being redundant. I think that about sums it up.</p>

Comments by: *Philip Martin, Mission Viejo resident, submitted on Public Comment Form on 18 June 1998*

Number	Comments	Response
9	<p>I believe that the most feasible approach is to cap the landfill. I do believe however that if anything is to be built on it, it should be no more than something like a parking lot or a green belt. Relocation would be much more hazardous on the environment and community due to the reexposure of possible toxic substances to workers as well as to the air. It would simply cost too much as well. These fills are already past their prime and their damage was done long ago. If any relocation was to happen it should have been done long ago. As it is now, I believe these fills are harmless for the most part. The fill that is active should be the only real concern.</p>	<p>Response: Thank you for your comment. DON and the regulatory agencies agree that the most feasible approach for Sites 2 and 17 is to cap the landfills.</p>

Comments by: *Dawn-Rene Martin, Mission Viejo resident, submitted on Public Comment Form on 18 June 1998*

10	<p>To the best of my knowledge I have to say depending on what MCAS El Toro holds for its future, capping the landfills is in our communities best interest. We cannot have an airport in this area. We have John Wayne, which should be efficient to meet the needs of those in our community and around the world. This means having this land used for anything else, jail, community center, residents, etc. Since the toxins in the ground have yet to effect the health of anyone living in the surrounding area there gives us no reason to believe it will in the future. Digging the landfills up could do nothing positive yet only expose any pollutants to put us at risk, which we are not in presently or will be by leaving them there.</p>	<p>Response: DON agrees that the landfills should be capped and thanks you for your comment.</p>

THE U.S. FISH AND WILDLIFE SERVICE**

RESPONSE COMMENTS
PROPOSED PLAN FOR CLOSURE OF
INACTIVE LANDFILLS AT
MCAS EL TORO, CALIFORNIA

Originator: Jim A. Bartel, Assistant Field Supervisor U.S. Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
1	<p>The U.S. Fish and Wildlife Service (Service) through the environmental Contaminants Branch of the Carlsbad Fish and Wildlife Office has reviewed the Proposed Plan for Closure of Inactive landfills at Marine Corps Air Station El Toro. While the general approach appears to be sound, our review did raise some specific issues outlined below.</p> <p>Though you stated in your cover letter to Mr. Charles Houghten, Chief of the National Wildlife Refuges Branch in the Service's Regional Office in Portland, Oregon, that the responsibility for landfill remedial action, operations and maintenance remains with the U.S. Government after the property transfer, you did not specifically state which agency will be responsible. This issue will need to be clarified during the transfer process. It is this office's experience that the Department of Defense maintains this responsibility until final closure of all sites is achieved.</p>	<p>RESPONSE: The Department of Defense currently intends to maintain responsibility for implementing the landfill remedial action for landfill closure and for monitoring and maintaining Sites 2 and 17 during the postclosure maintenance period. As noted in your comment, this issue will be further clarified during the transfer process.</p>
2	<p>The Plan (p. 2-3) includes a discussion of groundwater contamination in the immediate vicinity of the landfills and a description of the surface water bodies that exist adjacent to the landfills. No information was included, however, regarding the groundwater flow beyond the immediate vicinity of the landfills and where contaminated groundwater may surface if contamination were to move offsite. The Service will require this information to determine the potential for impacts to downstream wildlife resources (both within and outside the proposed refuge boundaries) in the future should some type of failure occur. This information is also needed to confirm that the offsite landfills are downstream of the proposed refuge, and contaminants from these sites would not impact wildlife resources at the proposed refuge.</p>	<p>RESPONSE: Except for an upgradient seasonal seep at Site 2, groundwater from beneath Sites 2 and 17 does not surface in the vicinity of MCAS El Toro. Depth to groundwater is shallowest in the foothills where Sites 2 and 17 are located. Downgradient of these sites, the depth to groundwater increases to over 100 feet below ground surface. Therefore, there is no potential for impacts to downstream wildlife resources from groundwater.</p> <p>At Site 2, there is a seasonal seep upgradient of the landfill in a man-made valley between the operational landfill areas A and B. The seep occurs following above average seasonal rainfalls and has been observed only twice in the past few years: once in 1995 and again in 1998. As part of the Phase II RI, water samples were collected from the seep to evaluate if the Site 2 landfill is impacting this surface water.</p>

Originator: Jim A. Bartel, Assistant Field Supervisor U.S. Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
2 (continued)		<p>The quality of this water was found to be very similar to groundwater from a monitoring well immediately upgradient of the landfill and near the seep location. Water quality was evaluated based on analytical results of sampling for cations and anions, pH, specific conductivity, volatile organic compounds, petroleum hydrocarbons, semivolatile organic compounds, pesticides, metals, and radionuclides. Concentrations of carbon disulfide, gasoline, benzoic acid, alpha-BHC, and beta-BHC were reported near the analytical detection limits. At the upgradient well 02_UGMW25, benzo(a)pyrene was reported near the analytical detection limits. Metals, cations, and anions were reported at similar concentrations in the upgradient well and in surface water collected from the seep. Since data indicate that upgradient water contains similar chemicals at similar levels, the DON has concluded that Site 2 has not impacted seepwater.</p> <p>To mitigate potential infiltration of the seepwater into landfill wastes, remedial design of the landfill at Site 2 will incorporate a subgrade drainage system, which will collect water from the seep and will direct the flow into the Borrego Canyon Wash streambed.</p>
3	<p>In evaluating the potential for impacts on site at the landfills, we cannot determine from the plan (p. 2) whether burrowing species are present and whether they were considered in the sampling conducted. Soil samples should be taken to the maximum depth of burrowing activity to assess this exposure pathway.</p>	<p>RESPONSE: Burrowing species such as ground squirrels are present over much of MCAS El Toro. During sample collection for the ecological risk assessment as part of the Phase II Remedial Investigations at Sites 2 and 17, burrows were found. Although no attempt was made to trap or observe burrowing species, air samples were collected at the entrance of the burrow and from within the burrow. Seven volatile organic compounds were detected at concentrations approximately 5 orders of magnitude below the no-observable-adverse-exposure-levels (NOAELs) at Site 2. Five volatile organic compounds were detected at</p>

PROPOSED PLAN FOR CLOSURE OF
INACTIVE LANDFILLS AT
MCAS EL TORO, CALIFORNIA**

Originator: Jim A. Bartel, Assistant Field Supervisor U.S. Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
3 (continued)		<p>Site 17. These compounds were also detected at concentrations approximately 5 orders of magnitude less than the NOAELs. The detected compounds were used in the ecological risk assessments at Sites 2 and 17.</p> <p>Soil samples were collected at the surface of the landfill sites. Collecting samples only at the surface was considered acceptable because the remedial investigation approach was developed to support the expectation that a presumptive remedy (capping) would be used for the landfills and that measures would be taken to prevent burrowing into the cap. Placing a landfill cap over the wastes would restrict the pathway for exposure to landfill materials for wildlife and plants.</p> <p>The DON met with representatives from the U.S. Fish and Wildlife Service on 08 April 1999 and agreed to work with the service during the remedial design phase to develop measures to control burrowing into the cap.</p>
4	<p>The Ecological Risk Assessment (ERA, p. 5) did not include insect sampling, despite the fact that the federally threatened coastal California gnatcatcher (<i>Polioptila californica californica</i>, "gnatcatcher") was the primary species of concern. Because we could not determine how risk was evaluated for this species without this information, please clarify how the ERA was conducted.</p>	<p>RESPONSE: Insect sampling was not performed at Sites 2 and 17. During preparation of the ecological risk assessment work plan in 1994 and 1995 and during the ecological sampling in 1995 and 1996, sampling of insects was discussed. Because flying insects are transient and consume food items on and off the sites, it was determined that sampling flying insects at the El Toro landfills would not yield reliable data on the uptake of contaminants through this food web. Samples of plant materials from Sites 2 and 17 that also contribute to the gnatcatcher diet were considered to provide more reliable evidence of uptake of potential contaminants from the sites. These plant materials were sampled, submitted for chemical analysis, and the chemical analysis was used in the food web modeling.</p>

Originator: Jim A. Bartel, Assistant Field Supervisor US Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
4 (continued)		<p>In addition, due to the lack of gnatcatcher toxicological information, the American robin was used as a surrogate species. The use of an American Robin as a surrogate was reviewed and approved by DTSC, U.S. EPA, and the RWQCB.</p> <p>Modeling performed at Sites 2 and 17 and at a nearby reference site unaffected by the landfills showed that the total hazard index for the American Robin is elevated at both landfills and at the reference site. Specifically, the total hazard index was approximately 1,200 at Site 2 (versus 170 at the reference site) and approximately 630 at Site 17 (versus 810 at the reference site). 2-(2-methyl-4-chlorophenoxy)-propionic acid (MCP), an herbicide, is the main contributor to risk at Site 2; metals are the main contributors at Site 17. MCP was reported in surface soil at Site 2. Avian species could be exposed to MCP through direct ingestion of soil or through ingestion of soil macroinvertebrates such as earthworms. The RI report did not speculate on the source of MCP at Site 2. The ecological risk assessment concluded that there may be a potential for impacts to avian receptors on Site 2 associated with MCP. However, the RI also noted that, based on the fact that the gnatcatchers are breeding at the site, they do not appear to be affected by chemicals or investigative activities. (There is one breeding territory at least partially on Site 2 that has been used in 1995 and 1996.)</p> <p>Details of the ecological risk assessment are provided in the Phase II Remedial Investigation reports for Sites 2 and 17.</p>

PROPOSED PLAN FOR CLOSURE OF
INACTIVE LANDFILLS AT
MCAS EL TORO, CALIFORNIA**

Originator: Jim A. Bartel, Assistant Field Supervisor U.S. Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
5	<p>According to the plan (p. 6), the metals present in the groundwater at the landfill sites are expected to be reduced by natural precipitation, but the long-term monitoring will be performed to verify that the concentrations of metals at the four sites are stable. Please clarify whether metals in the groundwater at these sites is expected to remain constant or decrease with time.</p>	<p>RESPONSE: Since the proposed plan for the landfills was issued, DON has completed a basewide evaluation of metals in groundwater. The results of this evaluation are presented in Appendix F of the CERCLA Groundwater Monitoring Plan, which was issued for agency comment in July 1998. The groundwater evaluation concluded that the concentration of metals present at the landfill represented ambient conditions, that is, the metal concentrations reported at the landfill sites are not significantly different from concentrations observed at sampling locations upgradient, downgradient, or crossgradient from these sites. Since the concentrations of metals at the landfills fall within the range of ambient concentrations of metals at MCAS El Toro, they are not expected to decrease with time.</p>
6	<p>In terms of the general design of a cap for the landfills, any cap must be consist of material with low permeability. The cap design must be such that ponding of water on the surface of the cap that would promote infiltration does not occur. The use of any vegetation on a cap should provide stability against erosion, and the vegetation should take up as much water that infiltrates the surface of the cap as possible to minimize leaching of contaminants from the contents of the landfill underneath. The use of native species would be preferred over the use of non-native annual grasses as vegetative cover. Acceptable native grass species include: Purple needlegrass (<i>Nassela pulchra</i>) and foothill needlegrass (<i>Nassela lepida</i>). The use of species, such as California buckwheat (<i>Eriogonum fasciculatum</i>), small-flowered melic grass (<i>Milica imperfecta</i>) and deerweed (<i>Lotus scoparius</i>), will allow for faster establishment of native species that support the gnatcatcher, while providing for rapid establishment of vegetation on the cap.</p>	<p>RESPONSE: The cap selected for the landfill sites meets the criteria suggested by USFWS to control infiltration. In the conceptual design presented in the feasibility studies for the landfill sites, ponding is minimized by sloping the cap surface and diverting rainwater to drainage ditches. The portions of the caps that are adjacent to the washes would be shielded from erosion by lining the banks with rip rap. Vegetation will be designed to provide stability against erosion and minimize leaching. DON appreciates USFWS's suggestions on the use of native grasses and will work with the U.S. Fish and Wildlife Service during the design phase to specify the appropriate vegetation, means of application, and maintenance.</p>

Number	Comments	Response
6 (continued)	<p>These species are all readily available in the nursery trade. This action will result in faster achievement of the necessary habitat characteristics to meet mitigation goals. These goals are generally established on an area basis rather than a plant for plant basis, thus allowing greater flexibility in the final plant composition on the site provided the habitat requirements are met.</p>	
7	<p>Alternative 3 is a single-layer soil cap and is the preferred alternative. According to the description, the soil in the cap would be compacted to reduce water movement through the cap. The cap would then be revegetated with annual grasses, but coastal sage scrub plants would be allowed to re-invade with time. Alternative 4 is a single barrier cap design of similar thickness to Alternative 3. Coastal sage scrub vegetation would not be permitted on this cap design to prevent roots from penetrating the barrier. Please clarify how a single soil layer cap can accommodate root growth as compared to the single barrier design of the same thickness comprised of soil layers in combination with a barrier layer (with four different material options). From the design information provided, Alternative 5 (single-barrier cap with additional soil cover) apparently provides flexibility in terms of vegetative cover while incorporating an additional barrier to water infiltration.</p>	<p>RESPONSE: Alternative 3 is a 4-foot-thick single-layer soil cap. Alternative 4 is approximately the same thickness, but the Alternative 4 cap consists of a 2-foot foundation, a barrier material (i.e., clay, bentonite, GCL, or FML) of variable thickness, and a 2-foot vegetative soil cover. Alternative 5 consists of 2 feet of foundation, a barrier material of variable thickness, and a 4-foot vegetative soil cover. The vegetative soil cover on Alternative 4 is not considered to be thick enough to support reinvasion with coastal sage scrub because the roots of the coastal sage could grow deeper than 2 feet and these roots could breach the barrier. Such a breach would act as a conduit for infiltration into the landfill.</p> <p>Because Alternatives 3 and 5 contain a 4-foot-thick vegetative soil cover, they are considered to provide adequate root depth to accommodate coastal sage scrub. Both alternatives are also protective of human health and the environment.</p> <p>DON considered Alternative 5 at Sites 2 and 17. The primary advantage of Alternative 5 is that it contains a barrier layer that would reduce the infiltration by even more than the 90 percent reduction provided by Alternative 3. However, the additional barrier found in the Alternative 5 cap was not considered necessary because the impact of the landfills on groundwater has been minimal even without a cover in place. In</p>

RESPONSE COMMENTS
PROPOSED PLAN FOR CLOSURE OF
INACTIVE LANDFILLS AT
MCAS EL TORO, CALIFORNIA

Originator: Jim A. Bartel, Assistant Field Supervisor U.S. Department of the Interior, Fish and Wildlife Services		CLEAN II Program Contract No. N68-711-92-D-4670 CTO-0135 File Code: 0222
To: Lt. Col. C. B. Wallace Marine Corps Air Bases Western Area, El Toro		
Date: August 17, 1998		
Number	Comments	Response
7 (continued)		<p>addition, the barrier layer in Alternative 5 is easier to damage and more costly to repair than a simple monolithic soil cap. DON therefore concluded that the Alternative 5 cap did not provide benefits commensurate with the additional costs associated with this cap. The Department of Toxic Substances Control, U.S. Environmental Protection Agency, and the Regional Water Quality Control Board have concurred with the selection of Alternative 3 for Sites 2 and 17.</p>
8	<p>According to the text discussion of Alternative 3, this alternative has the most long-term effectiveness and performance. However, 4C and 4D for all sites, and 5C and 5D for Sites 2 and 17 (those within the proposed refuge boundaries) have the highest relative performance in satisfying this criterion in the table. We cannot determine how these four alternatives are more susceptible to roots or burrowing animals as described in the text of the plan, particularly in the case of Alternatives 5C and 5D. As discussed above, the difference in the characteristics of the soil layers between Alternative 3 and the different options described under Alternative 4 and (for Sites 2 and 17) Alternative 5 needs to be clarified to accurately compare them.</p>	<p>RESPONSE: Please see DON's response to the preceding comment for a description of the characteristics of the soil layers in the various caps evaluated for Sites 2 and 17.</p> <p>Factors considered in the long-term effectiveness and permanence of the landfill caps include the degree to which the cap inhibits mobility of landfill contents and the ability of the landfill cap to maintain its integrity. The effectiveness of the cap in inhibiting the mobility of landfill contents is related to the amount by which the cap reduces infiltration into landfill contents.</p> <p>Alternative 3 reduces infiltration into the landfill by approximately 90 percent over existing conditions at Sites 2 and 17. Alternatives 4C, 4D, 5C, and 5D reduce infiltration at these sites even more. However, Alternative 3 was considered more resistant to damage (e.g., through settlement or burrowing) and much easier to repair, should damage occur, than Alternatives 4C, 4D, 5C, and 5D. Alternatives 4C and 4D were also considered ineffective in the long term for Sites 2 and 17 because they did not contain a thick enough vegetative layer to support reinvasion of coastal sage scrub.</p>

9	The designated use of the area including Site 5 is as a golf course. This use appears incompatible with the land-use restriction that preclude irrigation beyond that needed to establish grass on the landfill cap. Generally, golf courses require much more irrigation than grasslands planted strictly for ground cover. We recommend that the designated use be reconsidered in light of the presence of the landfill and the land use restrictions to be implemented.	RESPONSE: The DON acknowledges your concern with use of Site 5 as an irrigated portion of a golf course. DON is currently addressing the issue of irrigation and land use at Site 5 with the Local Redevelopment Authority, the agency to which this property may eventually be transferred. The issue of irrigation of the landfill cap will be completely evaluated and responded to in the Record of Decision for Sites 3 and 5.
10	The Service appreciates the opportunity to provide input on the closure of these landfills. This review is based only on the Proposed Plan for Closure of Inactive Landfills at Marine Corps Air Station at Marine Corps Air Station El Toro. Review of additional background materials, including but not limited to the Draft Final Remedial Investigation Report and the Draft Final Feasibility Study Reports, will be required as a part of the Service's pre-acquisition process. If you have any questions regarding these comments, please contact Carol Roberts of my staff at (760) 431-9440.	RESPONSE: On 05 April 1999, USFWS sent a letter to the DON with comments on the RI and FS reports and the draft Record of Decision for Sites 2 and 17. The DON and USFWS met on 08 April 1999 to review and resolve USFWS's concerns. The DON and USFWS intend to continue to meet and work together toward a mutual resolution of issues throughout the property transfer process.

MARCIA RUDOLPH RAB Member / Lake Forest City Council 24922 Muirlands - Space 139 Lake Forest, California 92630 (949) 830-9816	14
DONALD ZWEIFEL RAB Member / OU-1 Subcommittee Chair ETLRA (El Toro Local Redevelopment Authority) Consultant Cal-EPA DTSC (California Environmental Protection Agency, Department of Toxic Substances Control) Advisory Group 2110 West Larkspur Drive Orange, California 92868 (714) 937-1032	16

1 (The following comments were made on the
2 record:)

3
4 MS. GAIL REAVIS: I want to say on the landfills,
5 although I'm concerned and not real happy about all of the
6 landfill remedies, I am most concerned about the Site 5.

7 While I understand CERCLA (Comprehensive
8 Environmental Response, Compensation, and Liability Act)
9 and how the RAB is able to deal with the site, and they are
10 handling it adequately according to what the law is, it is
11 not going to work for the County or the people in the
12 County to have any site with deed restrictions on them. So
13 I want that to go on the record. I don't want to see any
14 deed restrictions.

15 I know that there's also a possibility that's
16 been discussed, on Site 5, to put in a membrane, a liner.
17 For many reasons that have been stated, that's not going in
18 at this point.

19 I want to go on record and say that I, at the
20 very least, want to see the Department of the Navy install
21 and pay for the actual liner and not have to have that
22 responsibility go back on the County. Because whatever
23 that land use is, it is going to need to be cleaned up to a
24 higher standard than the four feet of dirt and deed
25 restrictions that are currently intended for it.

1 Skipping to my other subject: I wrote a
2 letter May 30th to Joseph Joyce and copied Greg Hurley,
3 Wayne Lee, two congressmen and five supervisors. It was in
4 regards to my request at the March (1998) RAB meeting to
5 agendize (sic) Wayne Lee's statement that \$89,000,000 had
6 been spent on the environmental cleanup.

7 As a member of the RAB, I feel that so few
8 citizens from Orange County attend these meetings. And it
9 has been explained to me, more than once, that I am in the
10 public; and part of my job is to take this information back
11 to the public. So I asked what I thought was an
12 appropriate question, which is I'd like to see an
13 accounting of the \$89,000,000. I was put off.

14 I assumed -- maybe incorrectly, I assumed,
15 after requesting in March, that it would be agendized (sic)
16 at the next meeting in May.

17 I was then told, in May, that it was not on
18 the agenda; and that the RAB was too busy, at this time;
19 and that there was no date set for it to be on the agenda;
20 and that there was no place for me to go to get that
21 information.

22 And that was why I took the course of writing
23 the letter, to say if I, as a member of the RAB, cannot
24 come to our own committee and ask for details of the
25 information that is supposedly legal record, then the

1 public at large doesn't stand a chance. So as far as I'm
2 concerned, if you won't share it with me, you won't share
3 it with anyone. And that's wrong.

4 I'd not only like to have an answer to my
5 letter, as it states, at the earliest possible date -- I
6 have offered to make myself available to come to El Toro to
7 read it, to read whatever records you have, to mainly see,
8 for myself, what \$89,000,000 went for.

9 I'm not making any claim that there's been
10 any wrongdoing. But from the perspective of a few of the
11 RAB members, we don't see much but stacks of paper. And in
12 cases where a hole has been dug and actual work has been
13 done, it would be reassuring to know that and to see the
14 invoices for the paperwork, for the accounting, for the
15 money that shows us that the work has been done, and not
16 just a bunch of reports. I'd like an answer to my
17 letter. I'd like an answer officially. And I'd like the
18 information to be freely shared with the public.

19

20 MR. GREG HURLEY: My concerns are that the
21 proposed remedy is the minimal remediation that CERCLA
22 would allow. I do not think this remedy is protective of
23 human health and the environment. And I do not think it
24 accommodates the proposed reuse of the Base.

25

I believe in selecting this remedy, the

1 Marines are ignoring their obligations under CERCLA and the
2 BRAC (Base Closure and Realignment), Base reuse closure
3 statutes, to accommodate the proposed reuse of the
4 facility.

5 The presumptive remedy that the Marines are
6 proposing would not allow significant -- any significant
7 irrigation of the property and, consequently, would not be
8 appropriate for the proposed reuse as a golf course.

9 And I'd like to reference, for the record,
10 the Marines' obligations under the Base Reuse
11 Implementation Manual, Chapter 2.1.13, and the Marines'
12 obligation under the Department of Defense policy on
13 responsibility for additional environmental cleanup after
14 transfer of real property, which is a policy memo dated
15 25th of July 1997.

16 Under both of those documents, the Marines
17 are obligated to take into account the intended land use
18 that the community tends to put this to. And I think the
19 intended land use is being ignored. And I think inherent
20 in the BRAC statutes is the idea that if the proposed
21 remediation does not accommodate the intended land use,
22 that it's presumptively not protective of human health and
23 the environment.

24 That's all.

25 ///

1 MR. JERRY WARNER: Everyone in the community that I
2 have spoken with about the Base cleanup is expecting that
3 the Navy Department will transfer property and be clean.
4 And we are all opposed to the transfer of property with
5 restrictions on the ultimate use.

6 That's it.

7
8 MR. JOE FARBER: What I want to concern myself with
9 is the Sites 3 and 5 plans for remediation adjusted to the
10 potential usage of it that they pretty well agreed to by
11 both the Land Reuse Agency, as well as the City of Irvine
12 and other interested entities, of the disposition in
13 El Toro mop clean (sic).

14 We feel that the best solution for an
15 accepted reuse for them would be -- on Site 3, will be a
16 business or retail function and, also, on Site 5, a golf
17 course use looks most promising, and as agreed to by all
18 constituents at this point.

19 So we feel that the proposed remediation that
20 the Navy has, at this point, selected would not meet the
21 criteria for the health and safety and use potential that's
22 been pretty well agreed to by all the parties concerned.
23 And we would prefer, say, outside 5, that a membrane is
24 similar to what the DTSC (Department of Toxic Substances
25 Control) has proposed and recommended be put on Site 5; and

1 then, on Site 3, the repavement solution.

2 A mere cap will not be sufficient, will not
3 be acceptable by the State of California for the proposed
4 reuse for both the community, the City of Irvine, the other
5 agencies involved. And in its reuse of its particular
6 sites, we recommend and suggest that there be further
7 remediation, rather than simple capping, such as the
8 proposal, at this point, with the Navy.

9 Thank you.

10
11 DR. CHARLES BENNETT: I don't think the recommended
12 plan of the Navy is a good plan, particularly in regard to
13 Site 5. I'm not concerned about other sites; that would be
14 Site 2, 3 and 17.

15 Site 5, specifically, is a small site; and
16 it should be clean closed. And the way to do clean closure
17 is to remove the material that's there and put it some
18 other place. The kinds of places you can take that include
19 reuse as a cover material on another landfill or
20 incorporation into something like asphalt or concrete,
21 where there's a beneficial reuse. This is a standard
22 remediation procedure that's available for handling these
23 kinds of situations.

24 Also, the volume of waste in Site 5 is a very
25 small volume, relatively speaking. It's approximately

1 30,000 cubic yards. And the cost of consolidation
2 somewhere else is very cost-competitive with the proposed
3 plan that is in -- that we are in the Public Comment Period
4 on.

5 The proposed plan is a \$4.2 million cap of
6 the waste. The material is -- The other computation of the
7 cost of consolidation that was done had suggested that a
8 cost of consolidation would be \$7,000,000. But that
9 estimate, in my opinion, is very high.

10 First of all, there have been a number of
11 changes that have occurred over the last three years.

12 No. 1, the cost of hazardous waste disposal
13 has dropped significantly. And we can estimate the cost of
14 the hazardous waste disposal used in that estimate is now a
15 high number relative to the current marketplace. And that
16 is a very important point. Because there were two
17 suggestions made in how Site 5 waste would be handled in
18 assuming consolidation would not be an effective
19 remediation.

20 There was an assumption that 50 percent more
21 waste was present than the current estimate, assuming that
22 material underneath the current waste would be added to the
23 total volume. So you now had an increase in the waste of
24 50 percent.

25 Further, the -- one of the working

1 assumptions was that this entire waste is fifty percent
2 Class I hazardous material and required that very expensive
3 hazardous waste disposal.

4 We now have three factors that I suggest are
5 overestimates:

6 No. 1, the cost of hazardous waste disposal
7 for Class I that was used; the volume of hazardous waste
8 that was there; and how much really bad is stuff is
9 present.

10 These overestimates mean that the estimate of
11 \$7,000,000 for consolidation is a very high estimate and
12 may, in fact, be much lower.

13 What the Navy and the Bechtel consultants
14 agree to is that the estimate for consolidation had a high
15 error in it. And so, their seven-million-dollar number is
16 a very uncertain number. And when we look at what the
17 capping alternative cost is, it's currently, as in the plan
18 that's presented here, \$4.2 million.

19 Well, that also misses a significant point.
20 If we have a capped site, it will not be available to the
21 impacted community -- and that's the residents of
22 Orange County -- because it will not be freely available
23 for everybody to go wandering on.

24 So we have a missed opportunity value to that
25 land. Since this is approximately two acres of land, we

1 really should say we've missed the opportunity of using two
2 acres of land. Estimated value, in my opinion, is
3 approximately a million dollars for that. So that when we
4 look at the cost of capping, we are not 4.2 million, which
5 is comprised of 1.5 million for the capping and 2.7 million
6 for the monitoring (in) perpetuity, but we have an
7 additional cost of a million of missed opportunity for the
8 use of the land, giving us a real cost of \$5.2 million,
9 versus a very high and uncertain \$7,000,000 for clean
10 closure with a consolidation of the waste.

11 In my opinion, those two numbers are
12 indistinguishable. Clean closure is as cost-effective and
13 may, in fact, be more cost-effective than capping it.
14 Clean closure is better for the community, because it gets
15 rid of the problem and gives us a clean property that we
16 can do anything we want with. We can put a day-care center
17 on it; we can grow lettuce and tomatoes if we want to. But
18 if we have it capped with the current plan, we cannot even
19 irrigate it. And we have a fenced-off bit of scrub land
20 that will not be of any value to the impacted community,
21 which is Orange County and the Orange County taxpayers.

22 I am strongly against presuming -- that is a
23 regulatory word -- that the capping of Site 5 is a good
24 idea for the community. It's a bad idea for the
25 community. We should be strongly opposed to it. And we

1 should be strongly recommending and pressing the EPA
2 (Environmental Protection Agency) and the Navy to do a
3 clean closure, which is likely to cost less than the plan
4 of a cap.

5 Our proposal of clean closure also takes care
6 of the problem forever, whereas capping leaves the waste in
7 place. That means the rest of the Orange County people
8 have to live with the fact that there's two acres of
9 contaminated land that they can never use again.

10 That's my comment.

11
12 MR. BOB HARTMAN: And I am opposed to the
13 presumptive remedy; i.e., capping and monitoring -- I'm
14 going to divide these into a couple sections.

15 The question that I think the public should
16 have is that if a site is going to be monitored for thirty
17 years, obviously, it's because there is a potential risk
18 factor involved. And why would the community or the County
19 want to acquire a piece of property that's got a potential
20 risk factor, especially when a clean closure, in my
21 estimation, would be far less expensive and far more
22 environmentally sane.

23 I've been in the industry, the environmental
24 industry, for about a dozen years or so. I've done some
25 calculating. And if you're taking a look at 30,000 yards

1 of the soil at the landfill there, including the cost of
2 excavation, including the cost of sampling, say, every
3 hundred yards or so for everything under the sun, including
4 transport and disposal at the various facilities that would
5 take it -- Now, this doesn't include on-site recycling,
6 just getting rid of it at another site. If we were to
7 figure a high end of 20,000 yards being nonhazardous
8 material that could go to a Class III landfill and 10,000
9 yards that would even be Cal. Haz. or RCRA (hadardous waste
10 according to the State of California or the Federal
11 Resource Conservation and Recovery Act) that would go to a
12 Class I landfill, the cost of the whole process there would
13 be no more than two-and-a-half million dollars. If the
14 proportion was more than 10,000 yards of Cal. Haz. or RCRA
15 material, then I think that should even raise some more
16 eyebrows as to why it would be left in place with
17 monitoring going on. That's a very, very bad risk.

18 That's basically what I have to say.

19
20 MS. MARCIA RUDOLPH: The concern that I have about
21 the landfills, in general, is the fact that the community
22 does not have the assurance and the comfort level that we
23 know what is in those landfills.

24 And as far as the small ones, 3 and 5, is
25 concerned, the cost of removal action is negligible

1 compared to the cost of either the Millenium Plan or the
2 Airport Plan.

3 Therefore, why not go the extra mile?

4 Do a removal action so that there is no
5 question that there was something left behind.

6 Piggybacking on that, I would like to say
7 that my feeling is that if we do a removal action, I think
8 it should be moved off-site, not removed onto the one of
9 the two landfills.

10 I believe the other two landfills suffer from
11 the same problems as 3 and 5, in that we still don't know,
12 totally, what is in them. And adding to the bulk of what
13 already exists in those two landfills can compound the
14 problem, even though we would know what was in -- what we
15 were putting in, because it would have been checked before
16 it was dumped in.

17 I don't think we want to create more bulk,
18 particularly in Site 2, since it is the Borrego Canyon Wash
19 and since the water from that area ends up in Back Bay,
20 Newport Beach.

21 So my recommendation, from the standpoint of
22 the community, and for the peace of mind of the community,
23 is removal action. Therefore, the community never has to
24 worry what's in those two parts. And, conversely, the
25 community will then realize the ability to sell, redevelop,

1 to end up doing whatever ends up being the final use plan
2 with those sites without having to end up worrying about
3 caps and fills and the rest of it.

4 That does it. Thank you.

5
6 MR. DONALD ZWEIFEL: Well, I want to address the
7 problem of Site 5, the landfill Site 5. And I wanted to
8 tell you something that you might enjoy hearing about, at
9 least Bechtel, maybe, would enjoy this. I don't know.

10 When you look at the presumptive remedy that
11 the EPA promulgates, you -- Shakespeare -- A quotation from
12 Shakespeare comes to mind: "Me thinks you presume too
13 much," meaning you can't presume that the presumptive
14 remedy will be applicable in every instance for every site,
15 every site that needs to be remediated. In particular,
16 we're talking about landfills here.

17 So what I'm saying is that presumptive remedy
18 may be okay for the majority of sites, might be. However,
19 it certainly isn't applicable to Site 5, in my considered
20 opinion.

21 What I'm saying is this: That site
22 characterization that has been done on Site 5 is -- I don't
23 think is up to snuff.

24 By that, I mean, I don't think the worst case
25 scenario for Site 5. I say excavate, transport if need be.

1 Make a determination as to whether it is a Class III,
2 Class II or Class I.

3 My guess is that 99 percent of Site 5 will go
4 to a Class III landfill. And so, therefore, it's not going
5 to cost -- What is it? Thirty dollars a ton to go to the
6 Olinda Landfill. And if it's just what we think it is,
7 which is, you know, just waste, municipal -- We think it's
8 not just municipal waste; we think it's lawn clippings and
9 paper products, things like that.

10 And so, the thing is -- What we need to do is
11 excavate. I feel it would be a good idea to excavate.
12 Don't be afraid of it. It's not like Pandora's box that
13 we're opening up. In the presumptive remedy, we're
14 thinking, "Oh, my God. It could be Pandora's box."

15 That's nonsense, absolute nonsense. Site 5,
16 I don't believe, is a site that could be characterized as a
17 toxic landfill. But, then again, let's get into it; let's
18 excavate; let's not just hydropunch; let's take a look at
19 that site. Don't be afraid of it. Don't presume -- In
20 other words, don't look at it as being a toxic landfill.

21 Because I've talked to employees that have
22 been on the Base, and that have worked on the Base from '67
23 to '85, and that were in physical plant at El Toro. And
24 they told me they didn't think Site 5 -- I mean, that was a
25 toxic landfill in any way, shape or form.

1 Well, I would trust their judgment. I
2 honestly would. Because they know. My God, the I.G.
3 inspector would come every year at El Toro, annually. They
4 would hide things; they would bury things at some of the
5 landfills. But they usually would bury equipment. They
6 wouldn't bury toxic drums of anything.

7 So what I'm saying is that because I have
8 this first -- I mean, not secondhand -- I've talked with
9 several of these gentlemen. One fellow in particular --
10 Well, you might say, "Who is he?"

11 Well, the man's name was Millard Jackson, a
12 civil service employee that worked on Base, on the physical
13 plant, on this Base, from 1996 -- from '68, approximately,
14 to 1995, approximately. And, also, I talked to
15 Chuck Randolph. He's a retired Gunnery Sergeant. He
16 retired in 1970 from the Marine Corps. He worked on the
17 Base, servicing the different machines, coin-operated
18 machines. So he was here on the Base all the time. And he
19 knew what was happening. He was there.

20 By the way, if I'm not mistaken -- My God, he
21 was with the fire company, crash crew. So he would know --
22 He knows about the burn pits, and things like that. The
23 guy's really knowledgeable. He said, "Don, I don't think
24 there's" -- Of course, he's only one person and only gives
25 one particular P.O.V., or point of view. But I have a

1 tendency to want to trust his judgment, and particularly
2 about Site 5.

3 I guess what I wanted to say, the idea is, I
4 feel very strongly that you cannot, you will not -- we're
5 going to fight you, tooth and nail, if you decide to give
6 us deed restrictions on this property. You will not do
7 that. I swear, as a consultant, that Cal-EPA DTSC
8 (California Environmental Protection Agency, Department of
9 Toxic Substances Control) Advisory Group consultant to the
10 ETLRA (El Toro Local Redevelopment Authority) and the
11 C.A.C., Citizens Advisory Commission -- I can assure you
12 that I'm going to the Department of Navy, tooth and nail.
13 And I will go, with all due respect, to Bechtel Clean II,
14 also, on this.

15 You know, the idea is not to monitor forever,
16 for decades. No, you're not going to transfer this
17 property with deed restrictions. It's not going to
18 happen. Over my dead body. And I feel very strongly about
19 that.

20 Not only that, but that property, it's such a
21 small site. It's easy to excavate. It's easy to
22 remediate. For God's sake, let's do it, let's do it this
23 way. In this particular instance, it needs to be
24 excavated, transported. It must happen. It must not be
25 capped. I don't care how you cap it. If you cap it with

1 asphalt or asphaltic concrete or cement concrete, if you
2 cap it with a natural soil, hey, I don't want it capped. I
3 want it removed, and removed from the property.

4 It's so close, as you know, to the golf
5 course right there. And I've gone to the golf course so
6 many times for lunch. I enjoy going to the golf course, to
7 the cafe there. And it's a joy to go there. And I think
8 that the golf course could be expanded to encompass
9 Site 5. It should be part -- Site 5 should go away, and
10 the golf course should be expanded in that direction. I
11 see that it's a plausible way to go on this. And I just
12 don't feel Site 5 should exist.

13 Anyway, I think I'm sort of being redundant
14 now a bit, Jeanine. So forgive me for being redundant. I
15 think that about sums it up.

16
17 DR. CHARLES BENNETT: There is an important issue
18 with the way the Navy operates their holding of public
19 meetings, period.

20 This method of posters is an extremely
21 ineffective method of communicating with the public. It
22 wastes government time and staff time putting it together,
23 and does not give the public the opportunity to contribute
24 to the process of the CERCLA process. And I am strongly
25 opposed to this type of meeting format. It is meeting a

1 very simple minimum of CERCLA, but it is not effectively
2 interacting with the community. It is not giving the
3 community an opportunity to interact with both the
4 responsible parties and the regulatory parties. I'm
5 strongly opposed to this format for a public meeting, and
6 wish that it be changed in the future.

REPORTER'S CERTIFICATE

THE UNDERSIGNED SHORTHAND REPORTER DOES HEREBY
DECLARE:

THAT THE FOREGOING WAS TAKEN BEFORE ME AT THE
TIME AND PLACE THEREIN SET FORTH AND WAS RECORDED
STENOGRAPHICALLY BY ME AND WAS THEREAFTER TRANSCRIBED,
SAID TRANSCRIPT BEING A TRUE COPY OF MY SHORTHAND NOTES
THEREOF.

IN WITNESS WHEREOF, I HAVE SUBSCRIBED MY NAME
THIS DATE: JUL 20 1998.
