-----  
I have had an opportunity to review workplan portion of the subject document. I noted a few typos and questionable items which you might want to consider for cleanup at your workshop on August 26. They are as follows:

Page 1 - Do we know for sure at this point in time that the POLA construction plans call for a 5-foot deep excavation. POLA has yet to take any geotechnical samples. Also, the workplan does not mention the fact that POLA will be taking geotechnical samples once it has a license from the Navy to do so. Of course, they would have to have their own workplan and health and safety plan approved by DTSC.

Page 1 - In 1.2.1, second line, the reference should be to the "Cities of Los Angeles and Long Beach." Port of Los Angeles and Long Beach property lines do not extend into the Naval Station.

Page 1 - Where did the reference to 1938 come from? I was under the impression that the Navy first acquired property in 1940.

Page 3 - The reference to "Long Beach Harbor West Basin" is incorrect. Also, it seems to me that San Pedro Bay extends to the breakwater and that the Pacific Ocean designation is probably incorrect.

Page 4 - In the first line there is a reference to a commissary. Is this a reference to the old commissary which has been replaced by the facility on the south side of Seaside Avenue?

Page 4 - Typo "gology."

Page 6 - Typo "in in"

Page 15 - "Under current conditions, the access to the site is controlled by a fence." This is inconsistent with the statement at 1.2.1 on page 1 which states that the site is accessible to the general public.

On another subject, I sent you an E-Mail on August 19 regarding a Coast Guard request to use a site at the end of the mole at Naval Station Long Beach. I spoke to the Coast Guard again today and their plans call for a very small radar. It won't require a tower or equipment hut, only a 20-foot pole and very minor equipment requirements on the ground. Perhaps, the whole operation could be accommodated within a 4-6 radius. Please let me know as soon as possible if this will pose a problem for the Navy's cleanup so that I can get back to LTCR Snyder.

Thanks
