Subj: PERMIT REQUIREMENTS FOR THE REMOVAL ACTION AT SITE 12,
NAVAL AIR STATION, MOFFETT FIELD, CA

Ref: (a) Letter from Department of Health Services to Western Division, dated
6 February 1991
(b) Site 12 Removal Action 100 percent Design Document dated 5 April 1991

1. We are currently responding to Agencies' comments on the 100 percent design submittal of subject removal action. Reference (a) indicated that Hazardous Waste Facility Permit is not required for onsite treatment of contaminated soil as specified in Comprehensive Environmental Response, Compensation, and Liability Act Sec 121(e). However, in response to EPA's comments, we need to identify the substantive permit requirements that would need to be satisfied if the permits were required.

2. We would therefore appreciate if DHS could identify any permit requirements for such bioremediation removal action as submitted by reference (b).

3. Should you have any questions regarding this matter, the point of contact is Commander, Western Division, Naval Facilities Engineering Command (Attn: Paul Ko, Code 1813PK, (415) 244-2552).
