Commander
Western Division
Naval Facilities Engineering Command
Attn: Mr. Stephen Chao, Project Manager
900 Commodore Drive, Bldg. 101
San Bruno, California 94066-2402

Dear Mr. Chao:

DRAFT QUARTERLY REPORT, SEPTEMBER 1993, NAVAL AIR STATION MOFFETT FIELD

The Department of Toxic Substances Control (DTSC) has reviewed the subject document and forwarding the following comments for your consideration.

SPECIFIC COMMENTS

1. Page 14, 4th Paragraph

It is mentioned that the depressed groundwater table in the northern base boundary was the result of water pumping from Building 191 and the runway subdrain system. Please clarify if the above activities also affected the Lindberg Avenue area which is 3,000 feet away from the pumping station.

2. Page 15, 1st Paragraph

The report states that the water elevations in the B2 and B3 aquifers are generally 1 to 2 feet higher than that of A1 and A2 aquifers. It only holds true to certain areas such as the east of runway and the north of Chase Park. However, the hydrographs from Figures A-31, A-34, and A-54 did not support the statement.

3. Figure 7 and Figure 9

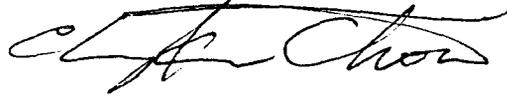

Please add the well locations in the south of Bayshore Freeway to reflect the equipotential lines presented in these figures. Otherwise, dashed lines should be utilized to show the inferred water levels.

Mr. Stephen Chao

4. Appendix A, Figure A-52

Please clarify if well 58B3 is an artitian well. What is the elevation of the top of casing?

Sincerely,

C. Joseph Chou
Engineering Geologist
