Re: Draft Final Addendum to the Revised Final Stationwide Feasibility Study  
No Further Action Sites, dated June 12, 2001

Dear Ms. Muckerman:

This letter transmits U.S. EPA's concurrence on the Draft Final Addendum to the Revised Final Stationwide Feasibility Study--No Further Action Sites, Moffett Federal Airfield (MFA). The draft final addendum does a good job in providing information and documentation regarding the No Further Action (NFA) sites.

The Navy's response to comments (Section 3 of Appendix A) adequately addresses EPA comments in the Draft Final version of the Report. These responses include providing additional documentation to demonstrate that, according to Dr. Lynne Trulio, the burrowing owl population at MFA (exposed to upland soils) is stable, and providing additional text and a series of tables summarizing soil and sediment analytical data from the NFA sites.

The Navy also agreed to remove Site 21, Patrol Road Ditch, and Site 3, Marriage Road Ditch, from the NFA addendum. These ditch areas will be addressed in the Northern Channel Data Gap Work Plan and Northern Channel Feasibility Study. Sampling location SSND-006, which is located in North Patrol Road Ditch, will be included in the Data Gaps investigation. The addendum clarifies that other areas of potential concern because of their human health risk ratings are also being addressed in other documents. Human Health Risk Assessment (HHRA) Exposure Area 3785 is part of the Lindbergh Avenue ditch and is being addressed by the National Aeronautics and Space Administration under Area of Investigation 6. HHRA Exposure Area 3974 is associated with Site 22 and is being addressed through institutional controls under the Site 22 Record of Decision.

We appreciate your efforts to seek resolution to our concerns and recognize the considerable amount of work that went into preparing this addendum. Please call me at (415) 744-2387 if you have any questions or would like to discuss the document further.

Sincerely,

*Carmen White*
