**DRAFT SITE 24 ADDITIONAL CHARACTERIZATION SUMMARY
REPORT, NAVAL STATION TREASURE ISLAND (OCTOBER 6, 1997)**

Dear Mr. Galang:

The Department of Toxic Substances Control, in conjunction with the Regional Water Quality Control Board, has reviewed the draft Site 24 Additional Characterization Summary Report for Naval Station Treasure Island, dated October 6, 1997. This report fills an important data gap in characterizing the nature and extent of solvent contamination related to the former dry cleaning facility at Building 99. It is our understanding that this data will be included in the Final Onshore Remedial Investigation Report.

Please note that the arrow denoting groundwater flow direction is missing from the contaminant concentration maps (Figures 3-11) and should be added when the maps are finalized for the RI Report.

If you have any questions regarding this letter, please contact me at (510) 540-3769.

Sincerely,

Mary Rose Cassa, R.G.
Engineering Geologist
Office of Military Facilities
