To: Louie Cardinale, Remedial Project Manager
David Clark, Lead Remedial Project Manager
Keith Forman, BRAC Environmental Coordinator, Department of the Navy

From: Langan Treadwell Rollo
On behalf of the Treasure Island Development Authority (TIDA)

Date: February 5, 2016

Project: Treasure Island/Yerba Buena Island
San Francisco, CA
Project No. 731611601

Subject: Comments from Langan Treadwell Rollo/NGTS/TIDA and Terraphase/TICD on the Draft Work Plan "Data Gaps Investigation at Installation Restoration Site 31 Former Naval Station Treasure Island", document control number CBI-2005-0014-0004, dated December, 2015.

N60028_002715
TREASURE ISLAND
SSIC NO. 5090.3.A

Comments from Langan Treadwell Rollo/NGTS/TIDA:

1. **Section 7.5.2.1, Excavation Sidewalls:** The plan should state (or otherwise be clear) that the 20% scan coverage will be in addition to any scanning required for areas where debris is discovered, and that any such areas will be 100% scanned. Also, the plan does not describe how the 20% of the sidewall areas to be scanned will be selected (e.g. judgmentally, at random, or combinations thereof).

Comments from Terraphase/TICD:

1. **Section 4.1, Excavation Sidewalls:** The second sentence in paragraph two does not make sense as written; there appears to be a missing or misused word in the italicized section of the sentence: "First, analytical results from the SU will be compared with a dose-based criterion, which will compare the potential dose to a receptor from residual radioactivity *within the SU meets* federal dose standards."
